About us

With thirty years of experience, aquaform offers a wide range of hydrothermal systems. Thanks to its expertise, specificity and ability to adapt to various needs, aquaform water experiences are perfectly suited for SPAS where quality, innovation, and uniqueness are essential.

LIGHT

AROMA

SOUND

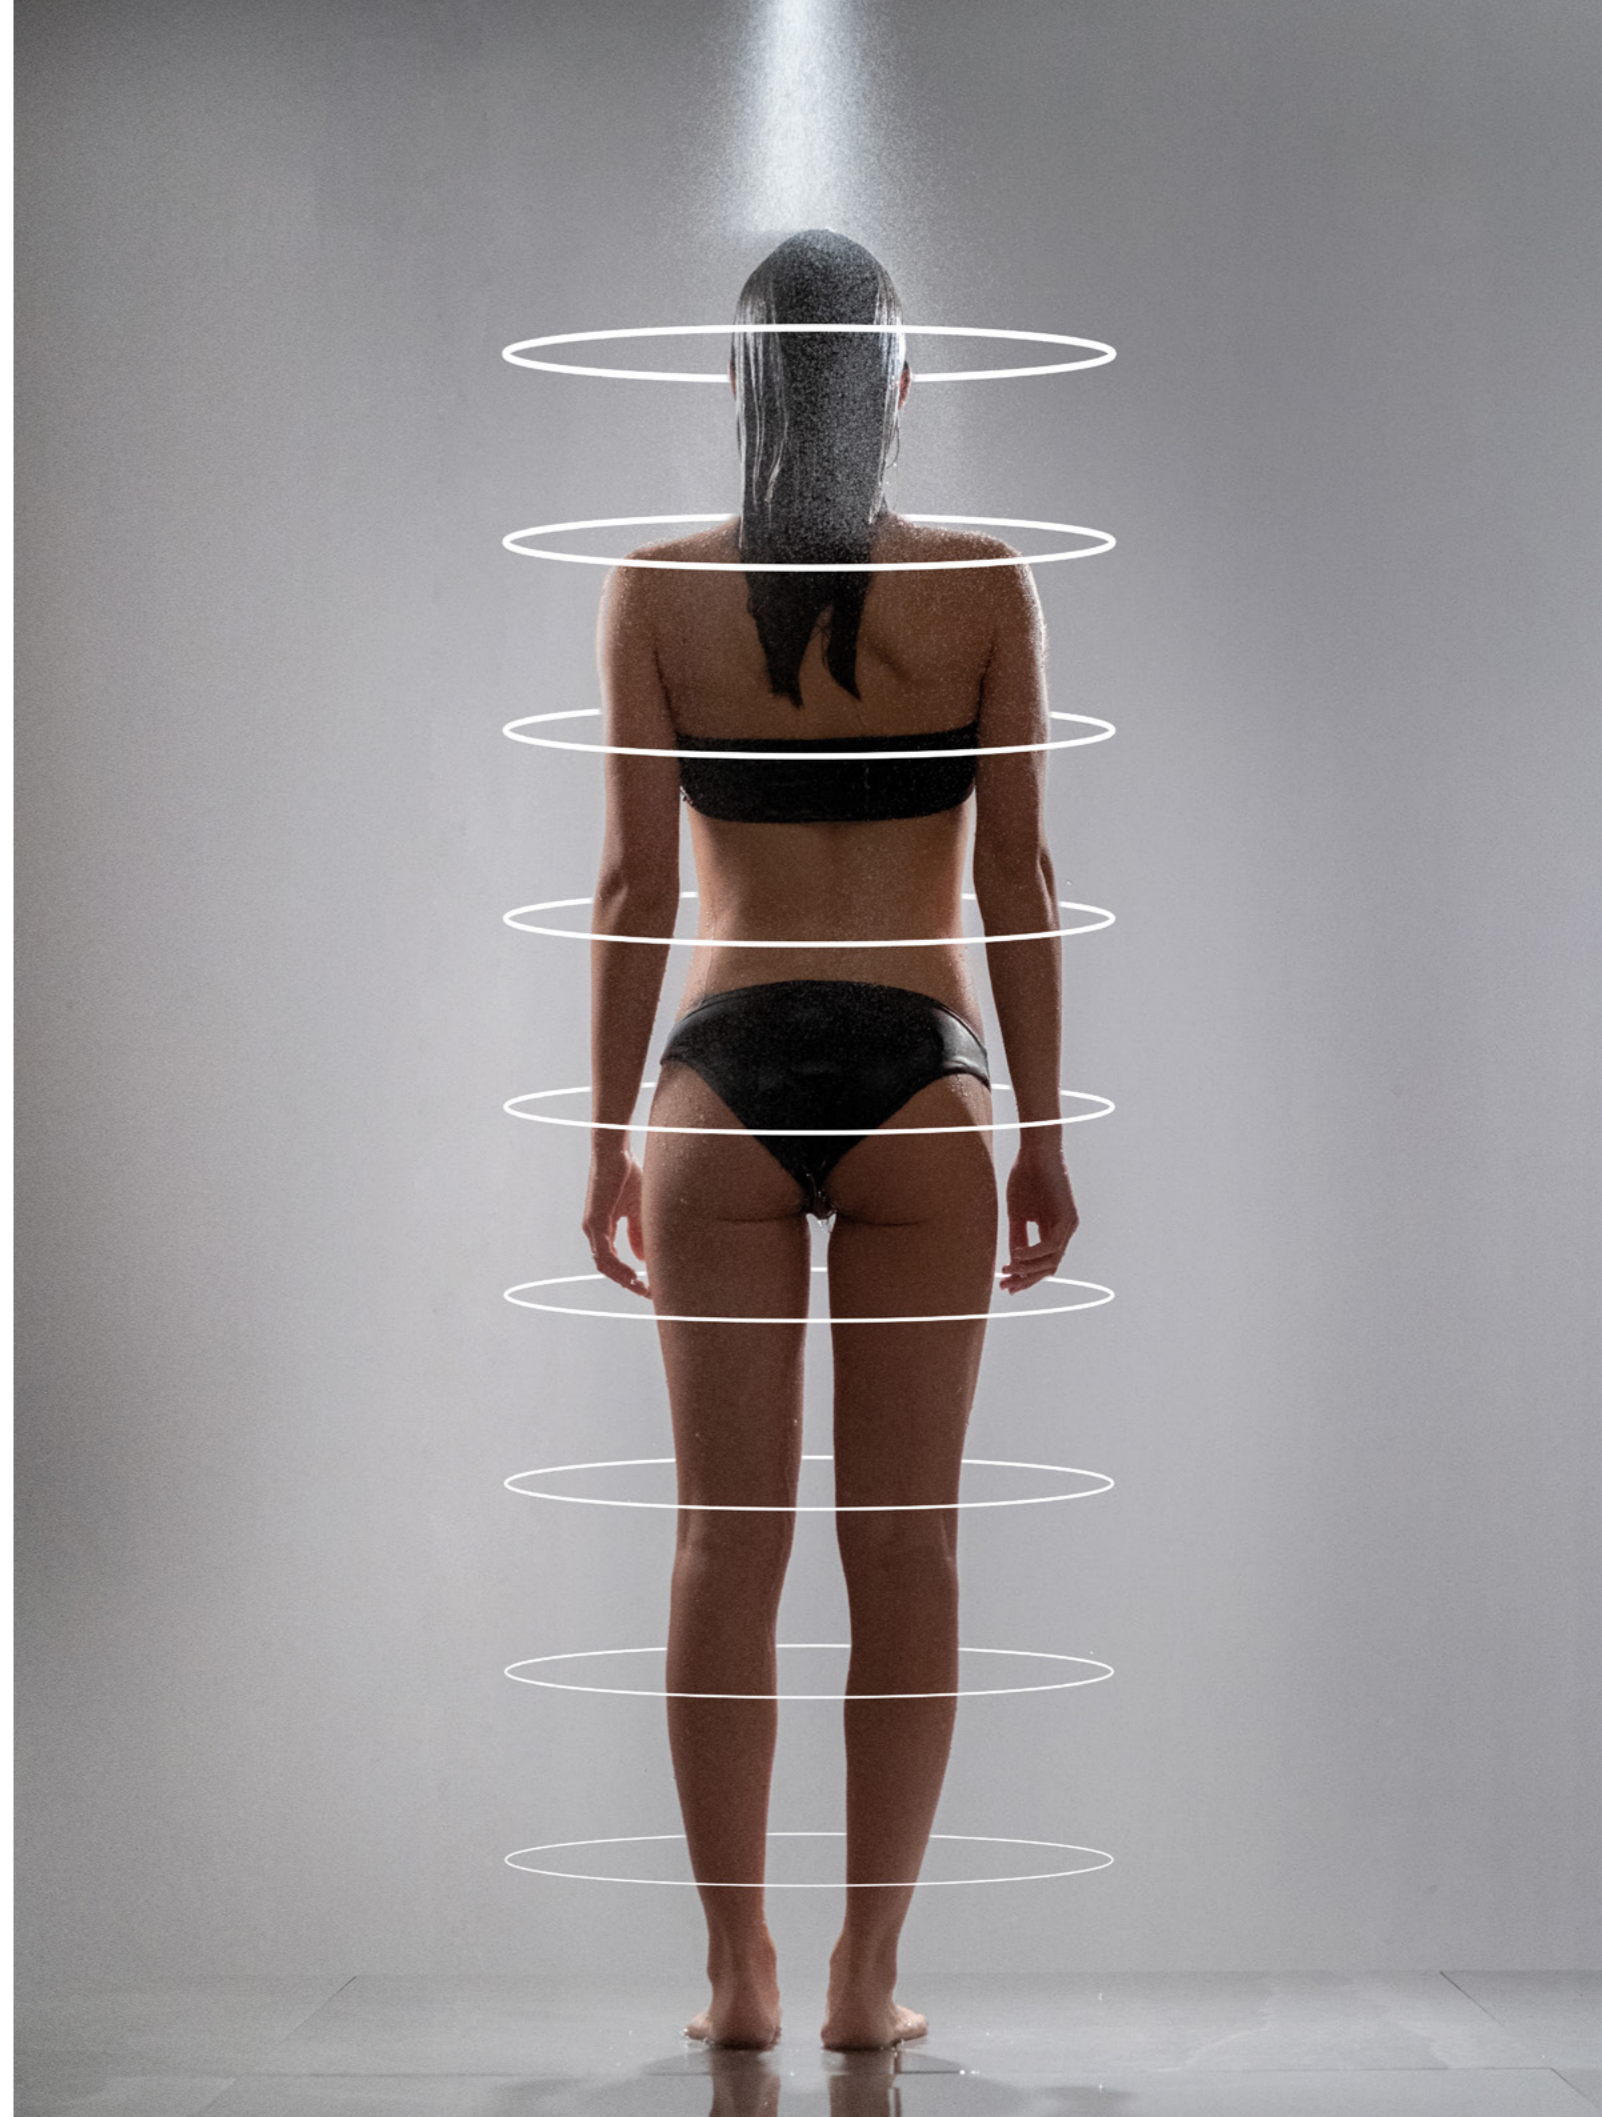

WATER

Wellness ingredients

aquaform presents meticulously designed solutions tailored to enrich the SPA environment by harnessing the harmonious blend of natural elements such as **water, light, sounds, and aromas**. These elements seamlessly integrate to create immersive and innovative experiences. Within aquaform's **water** wellness experiences, each jet is carefully crafted to promote not only physical relaxation but also mental rejuvenation, offering a safe escape from everyday stresses. The combination of **aromatherapy** with water creates an ambiance that evokes quiet landscapes, positively influencing overall well-being. Fragrances play a pivotal role in evoking memories, stirring emotions, and enhancing the sense of inner harmony. Integrating **chromotherapy** into SPA experiences, each color of the spectrum influences mood and energy levels, fostering renewal and spiritual balance. The interplay of light and color enhances the relaxation journey. The adept incorporation of **sound effects** forms a deep connection with nature, nurturing profound relaxation and inner harmony, while enhancing a heightened sense of serenity and peace.

Your well-being as a revitalizing water experience.

The meticulously designed water experiences by aquaform are intended to provide an extensive range of benefits to our body. Each component is intricately crafted to contribute to overall well-being, exerting influence over both our physical and mental state.

BENEFITS

Nervous system

Hydrotherapy can have several benefits for the nervous system, primarily through its effects on relaxation, stress reduction, and the stimulation of various sensory receptors.

- › **Stress Reduction:** hydrotherapy, particularly when combined with warm water and gentle water movements, has a calming and soothing effect on the nervous system. The warm water can help reduce the production of stress hormones like cortisol, leading to a sense of relaxation and calm.
- › **Improved Sleep:** the relaxation induced by hydrotherapy can enhance sleep quality. A restful night's sleep is essential for the nervous system's overall well-being, including cognitive function and emotional stability.
- › **Enhanced Mood:** the release of endorphins during hydrotherapy can improve mood and reduce symptoms of anxiety and depression. Endorphins act as natural mood lifters and can positively impact the nervous system.
- › **Sensory Stimulation:** hydrotherapy often involves sensory elements like water jets, aromatherapy, and soothing music or lighting. These sensory stimuli can engage and relax the nervous system, leading to an improved sense of well-being.
- › **Cognitive Benefits:** improved relaxation and reduced stress can enhance cognitive function. Hydrotherapy sessions can help clear the mind, improve focus, and promote mental clarity.
- › **Improved Blood Flow to the Brain:** hydrotherapy's effects on circulation extend to the brain. Better blood flow to the brain can improve cognitive function and overall nervous system health.
- › **Pleasure and Enjoyment:** engaging in enjoyable hydrotherapy experiences can trigger the release of dopamine, a neurotransmitter associated with pleasure and reward. This can positively affect mood and the overall functioning of the nervous system.

Circulatory system

Hydrotherapy can have several benefits for the lymphatic and circulatory systems. These benefits are often associated with the use of water, temperature variations, and hydrostatic pressure in hydrotherapy treatments.

- › **Improved Circulation:** hydrotherapy, especially when water temperature varies between hot and cold, can enhance blood circulation. Alternating between hot and cold water causes blood vessels to expand (vasodilation) and contract (vasoconstriction). This "vascular gymnastics" stimulates blood flow throughout the body and may improve overall circulation.
- › **Lymphatic System Activation:** hydrotherapy, such as kneipp walk (alternating between hot and cold water), can stimulate the lymphatic system. The temperature changes and hydrostatic pressure of water can encourage the movement of lymph fluid, which plays a crucial role in immune function and waste removal.
- › **Relaxation of Blood Vessels:** warm water cause blood vessels to dilate, which can lead to reduced blood pressure. This can be beneficial for individuals with hypertension (high blood pressure).
- › **Enhanced Immune Function:** the lymphatic system is closely tied to the body's immune function. By promoting lymphatic circulation, hydrotherapy may help support the immune system's ability to fight off infections.
- › **Improved Skin Health:** hydrotherapy treatments often include skin stimulation through water jets or other water features. This stimulation can enhance skin health by promoting blood flow to the skin and encouraging the removal of waste products through the lymphatic system.
- › **Detoxification:** improved lymphatic circulation supports the body's natural detoxification processes.

Muscular system

The benefits for muscle relaxation, pain relief, improved circulation, and stress reduction are based on well-established scientific principles related to the effects of warm water and hydrotherapy on the musculoskeletal system.

- › **Muscle Relaxation:** warm water, can cause vasodilation (widening of blood vessels) in the muscles. This increased blood flow to the muscles can help reduce muscle tension and promote relaxation
- › **Pain Relief:** The warmth of the water can stimulate the release of endorphins, which are the body's natural painkillers.
- › **Improved Circulation:** hydrotherapy, can enhance blood circulation. Improved circulation delivers oxygen and nutrients to muscles and joints, which can promote healing and reduce the risk of cramps or muscle spasms.
- › **Stress Reduction:** stress and anxiety can exacerbate musculoskeletal symptoms, including muscle tension and pain. The relaxation induced by warm water and hydrotherapy can help reduce stress, indirectly benefiting the musculoskeletal system.

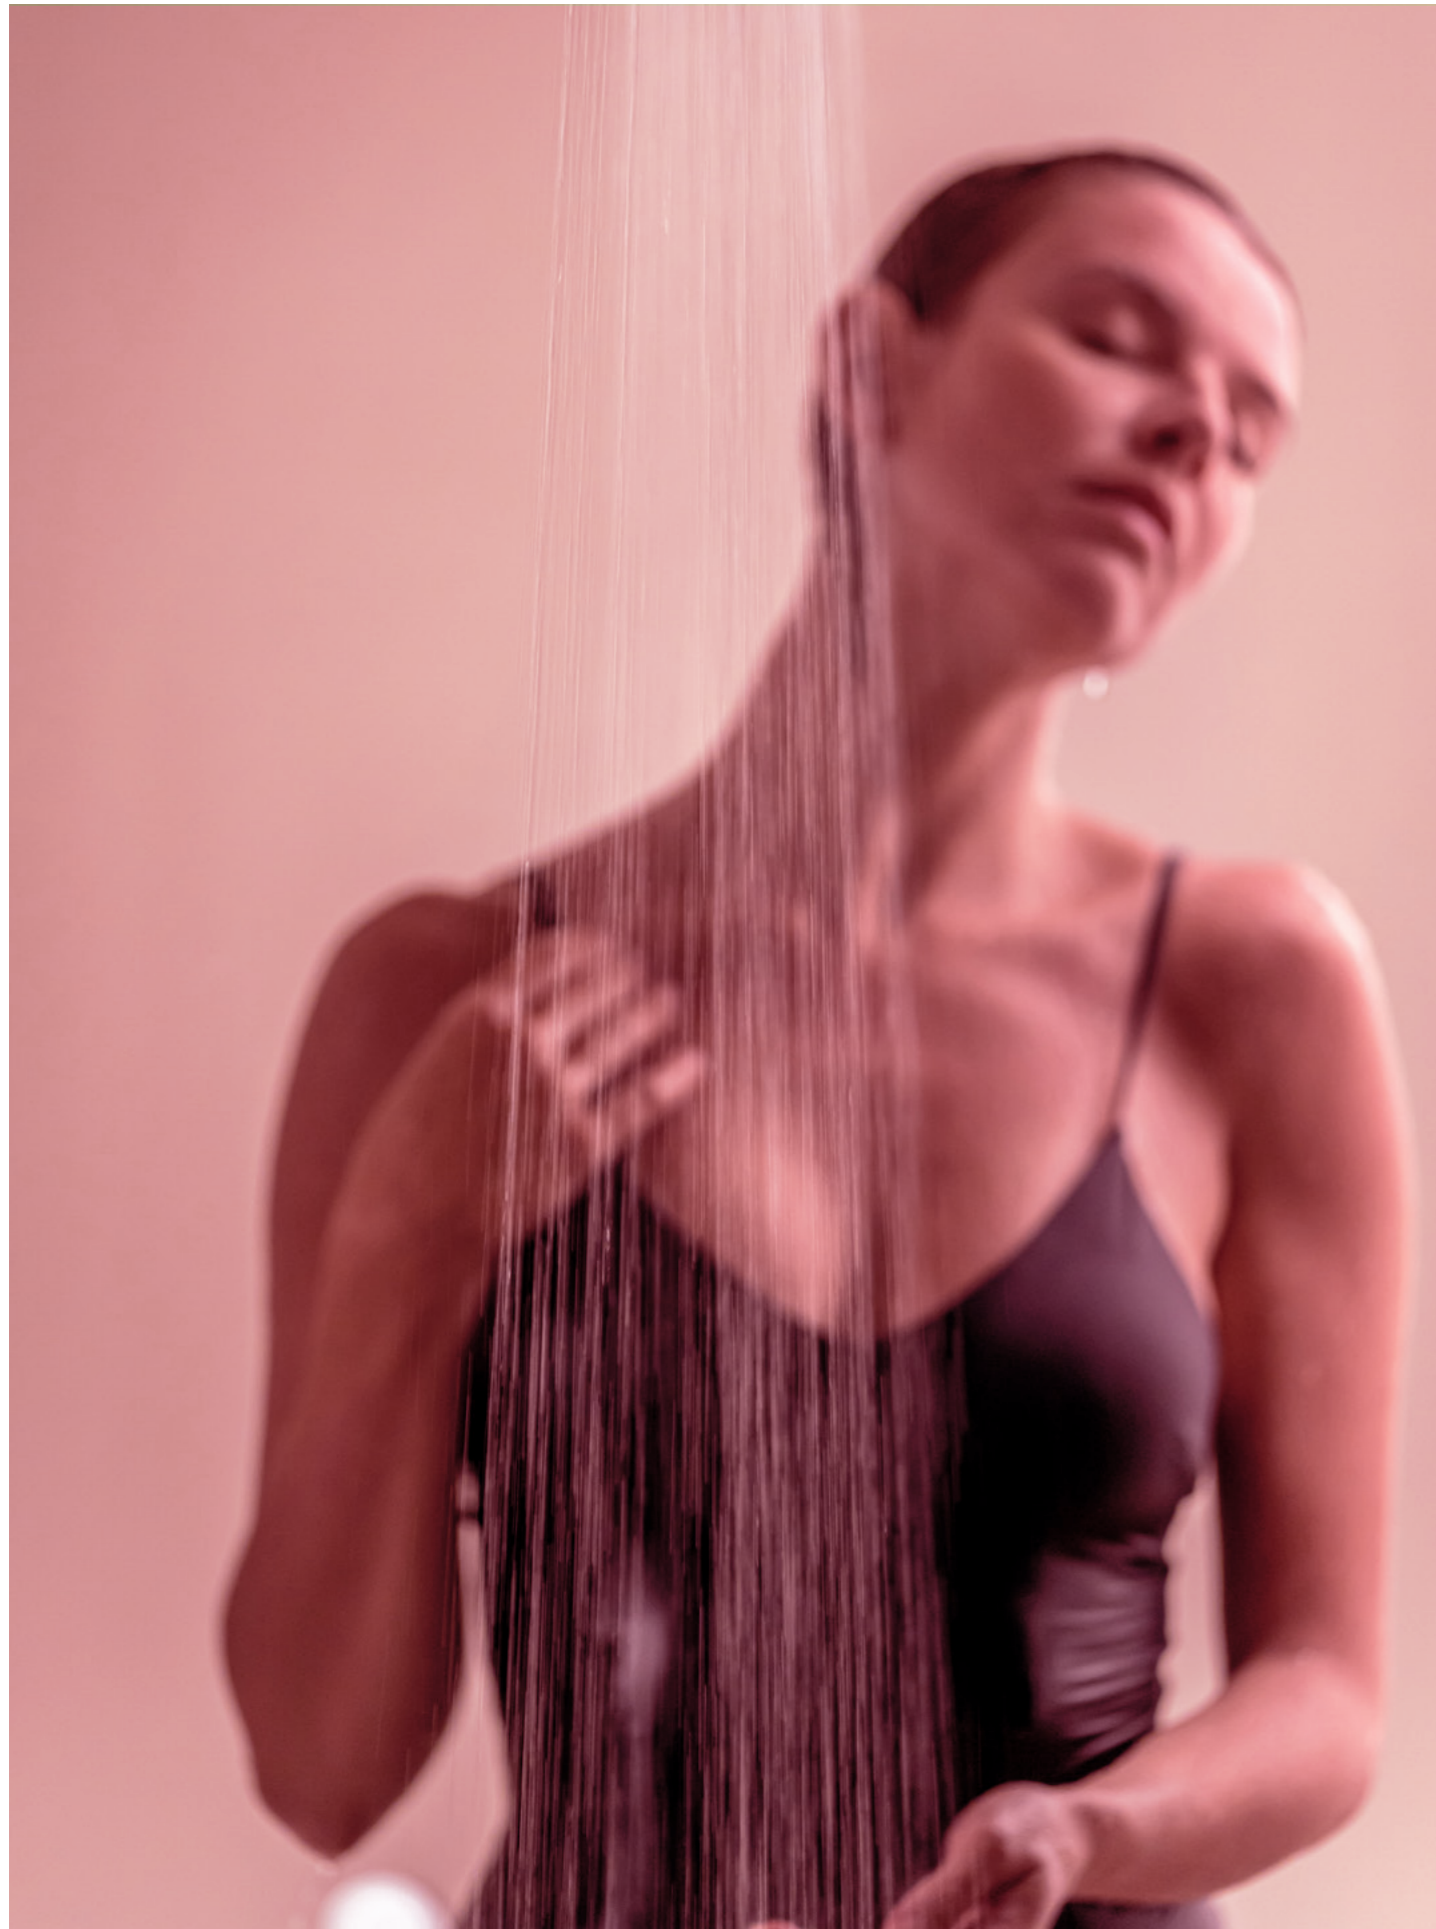

Mindfulness

Hydrotherapy can have several benefits for the nervous system, primarily through its effects on relaxation, stress reduction, and the stimulation of various sensory receptors.

- › **Stress Reduction:** hydrotherapy, particularly when combined with warm water and gentle water movements, has a calming and soothing effect on the nervous system. The warm water can help reduce the production of stress hormones like cortisol, leading to a sense of relaxation and calm.
- › **Improved Sleep:** the relaxation induced by hydrotherapy can enhance sleep quality. A restful night's sleep is essential for the nervous system's overall well-being, including cognitive function and emotional stability.
- › **Enhanced Mood:** the release of endorphins during hydrotherapy can improve mood and reduce symptoms of anxiety and depression. Endorphins act as natural mood lifters and can positively impact the nervous system.
- › **Sensory Stimulation:** hydrotherapy often involves sensory elements like water jets, aromatherapy, and soothing music or lighting. These sensory stimuli can engage and relax the nervous system, leading to an improved sense of well-being.
- › **Cognitive Benefits:** improved relaxation and reduced stress can enhance cognitive function. Hydrotherapy sessions can help clear the mind, improve focus, and promote mental clarity.
- › **Improved Blood Flow to the Brain:** hydrotherapy's effects on circulation extend to the brain. Better blood flow to the brain can improve cognitive function and overall nervous system health.
- › **Pleasure and Enjoyment:** engaging in enjoyable hydrotherapy experiences can trigger the release of dopamine, a neurotransmitter associated with pleasure and reward. This can positively affect mood and the overall functioning of the nervous system.

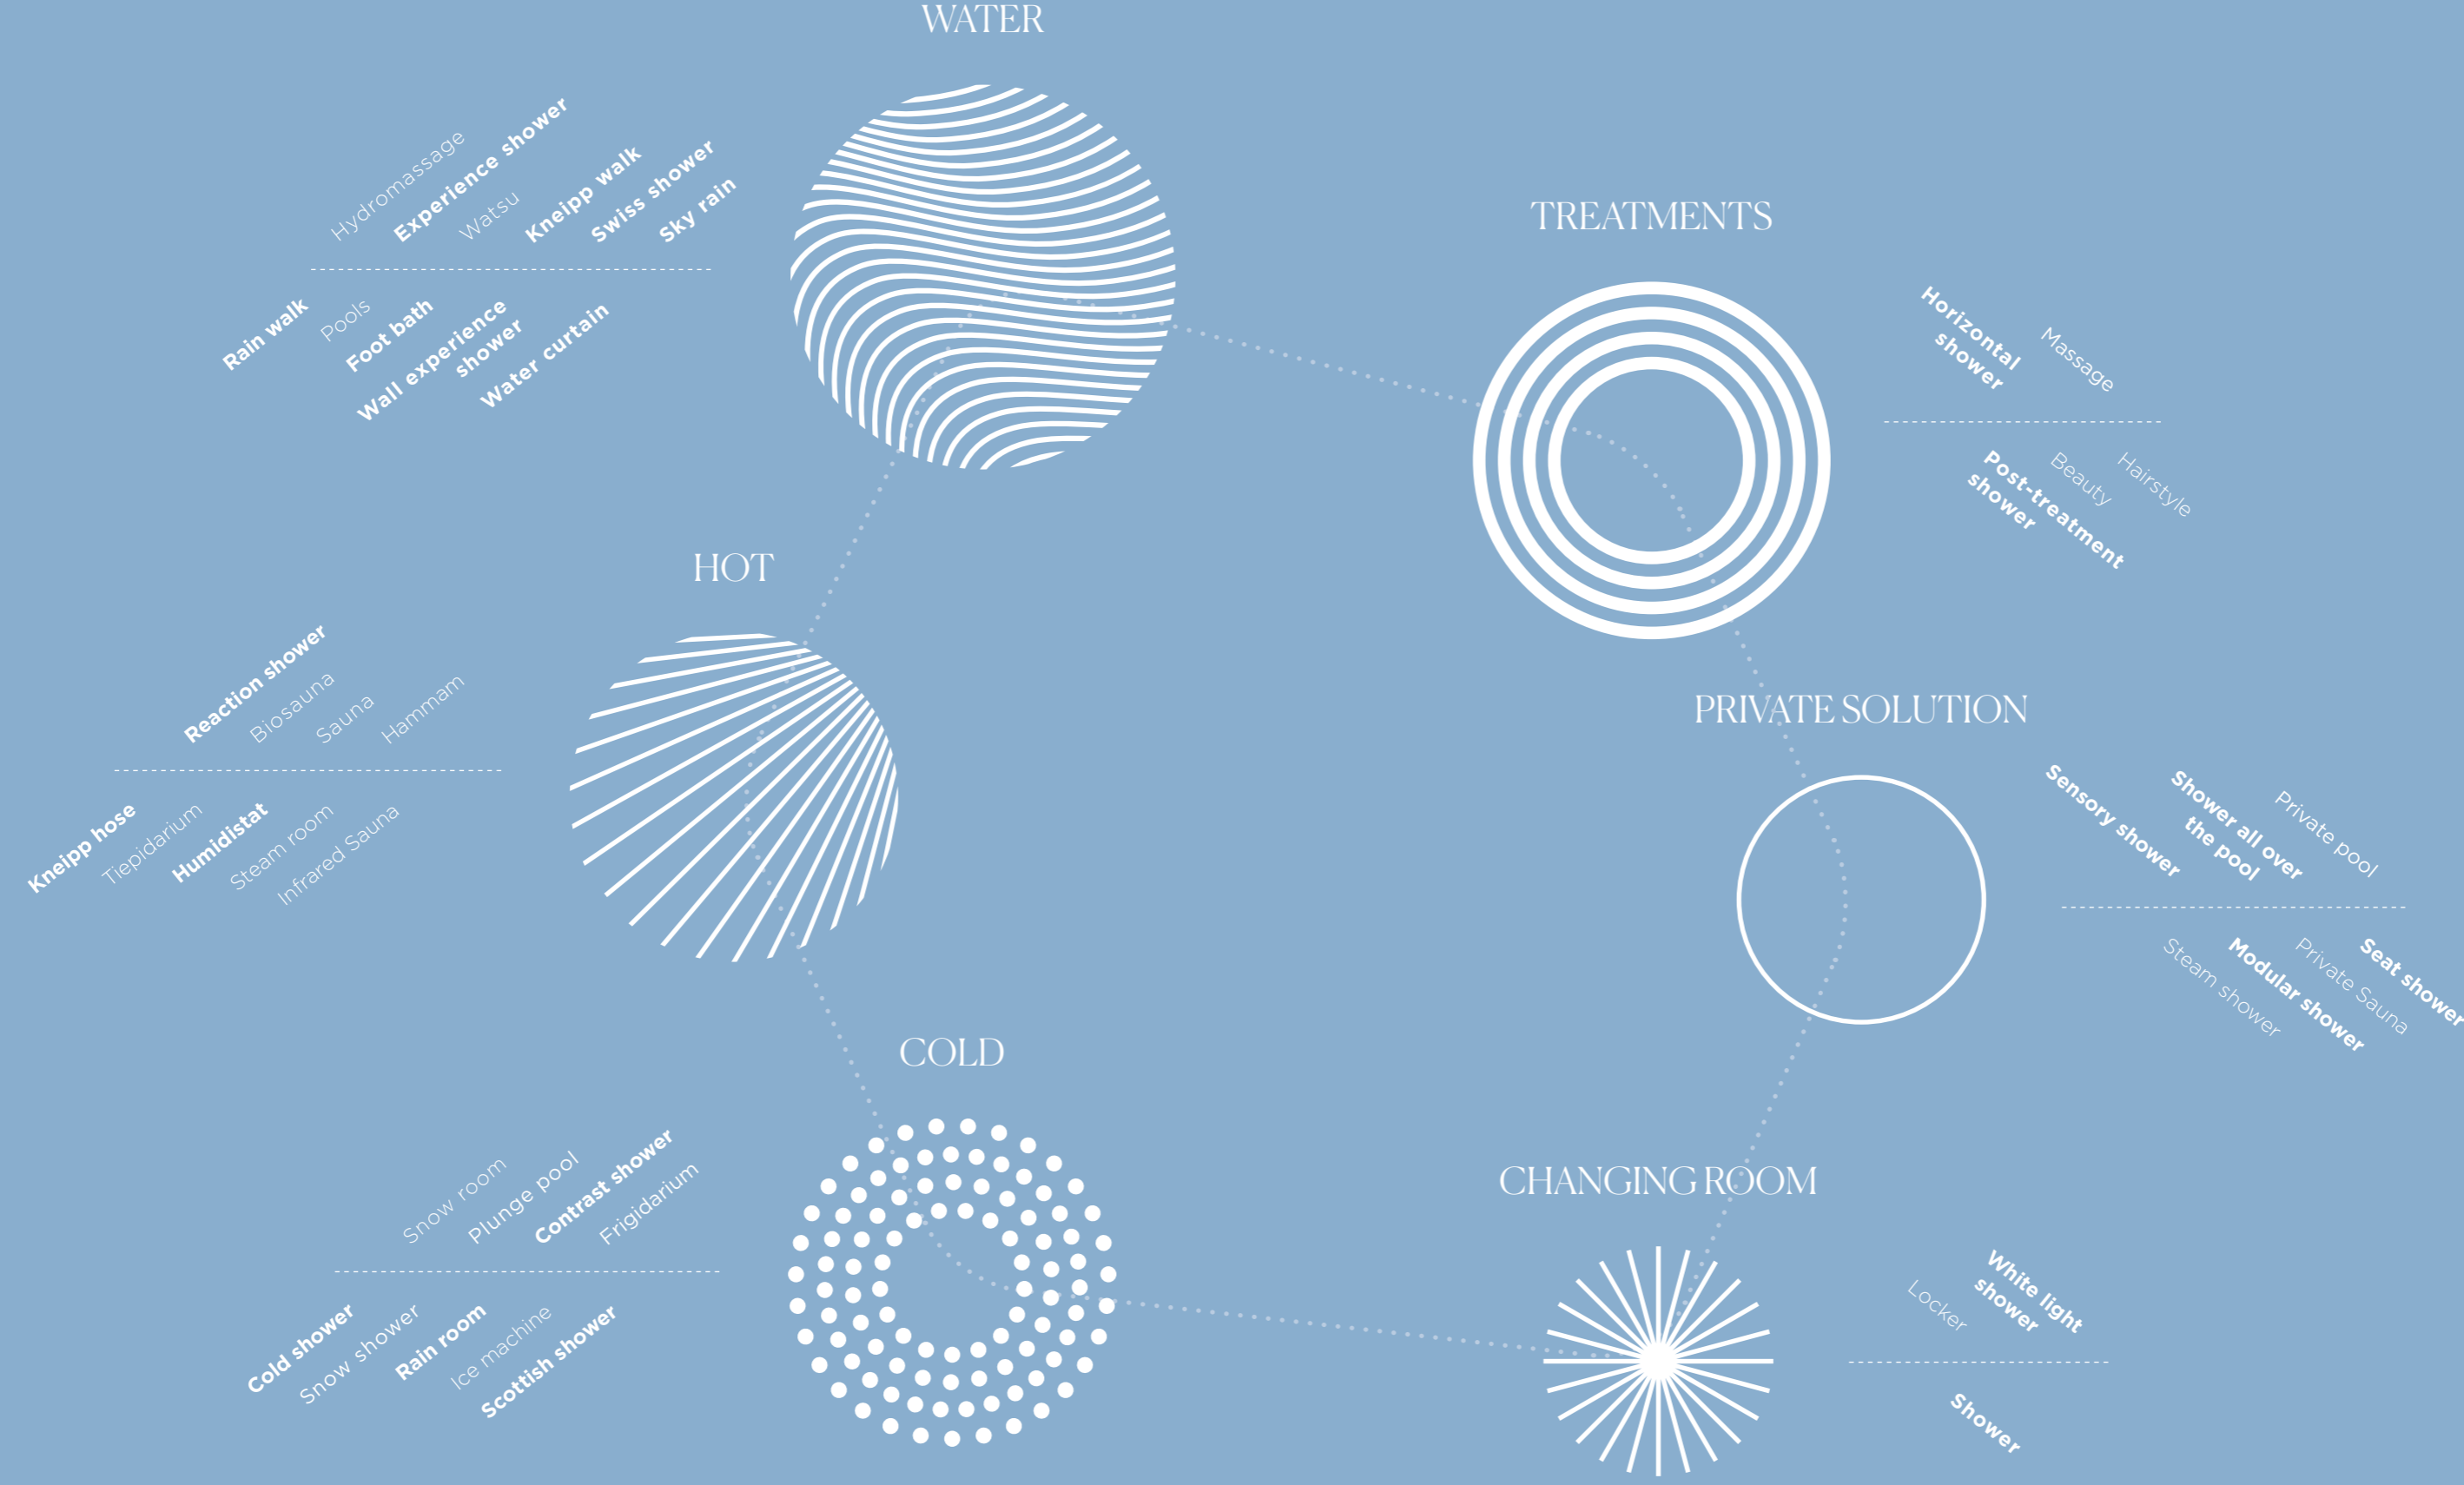

BENEFITS

Delight

aquaform water experiences are designed to engage various senses to create a pleasurable and rejuvenating experience. Sensory pleasures of an experience shower can include:

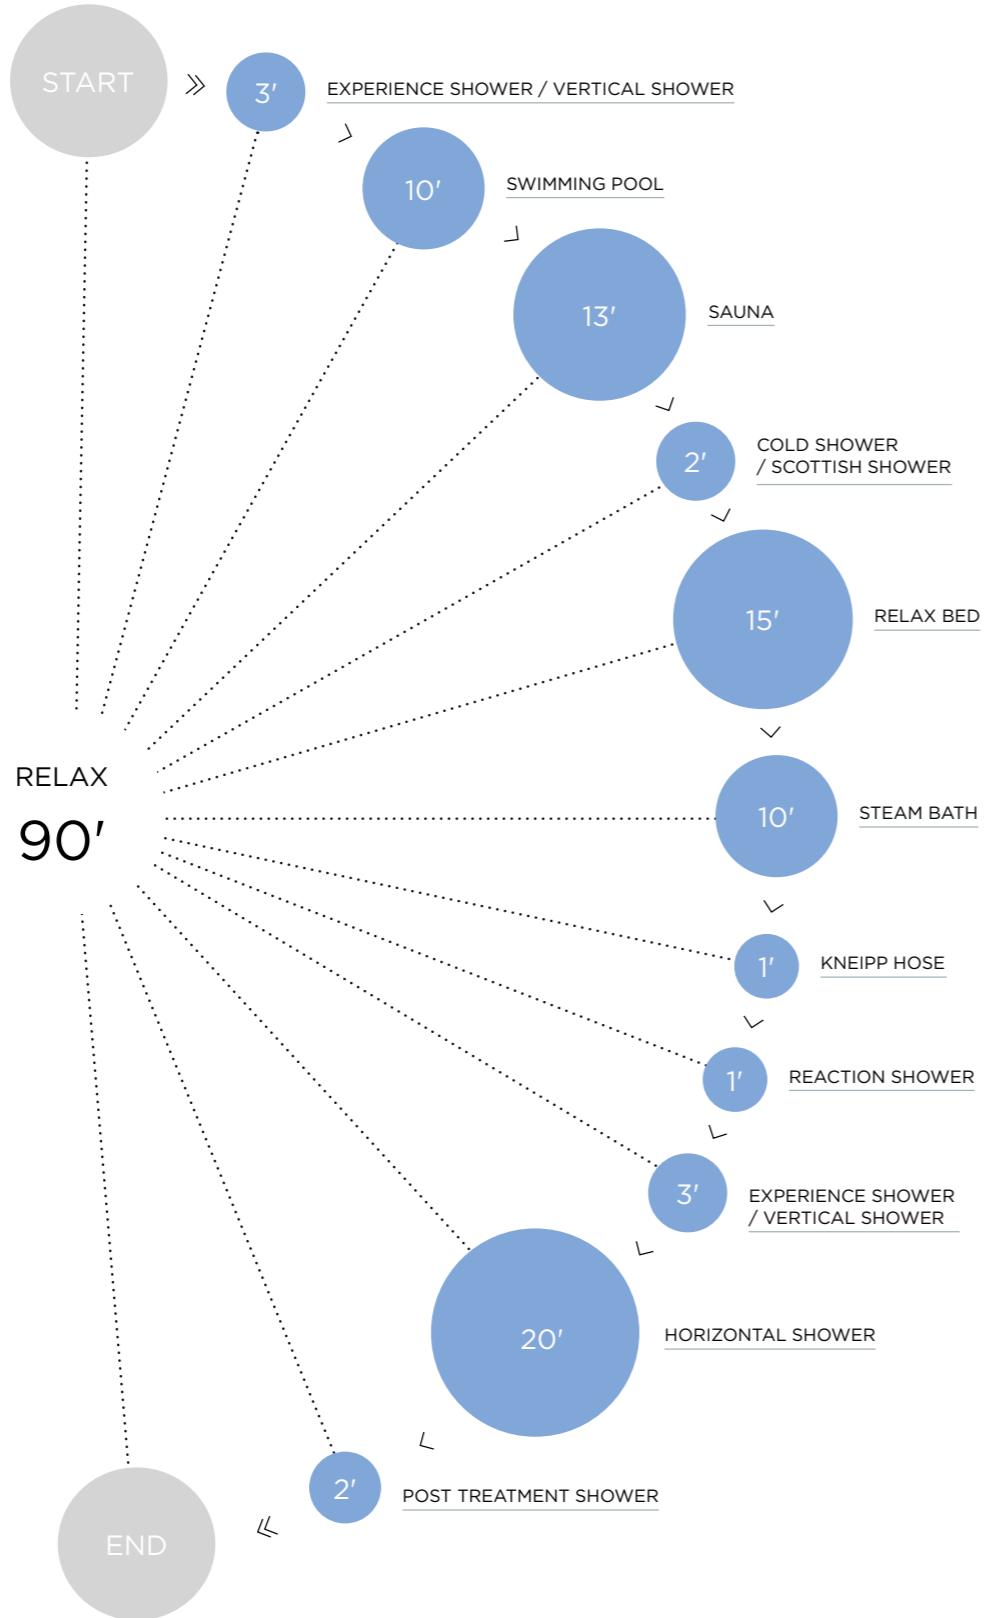

- › **Aromatherapy:** aromatherapy is a sensory enhancement technique that combines the benefits of water and fragrant aroma for a holistic well-being experience. Mist may carry these fragrances, enveloping guests in a cloud of soothing scents. The combined effects of water, touch, and scent create a multi-sensory experience, promoting relaxation and rejuvenation. Aromatherapy in an experience shower aims to reduce stress, improve mood, and enhance overall wellness through the inhalation of carefully chosen, aromas , tailored to specific needs or moods.
- › **Lighting Effects:** mood-enhancing lighting, including chromotherapy, can create an atmospheric and visually pleasing experience. Chromotherapy in aquaform water experiences involves using specific colors to create various moods and emotional responses. Each color is associated with unique healing properties, such as blue for relaxation and green for balance. By bathing guests in colored lights, the experience shower aims to balance and energize both body and mind. Guests can often customize the color lighting to suit their preferences and therapeutic goals

SPA AREAS

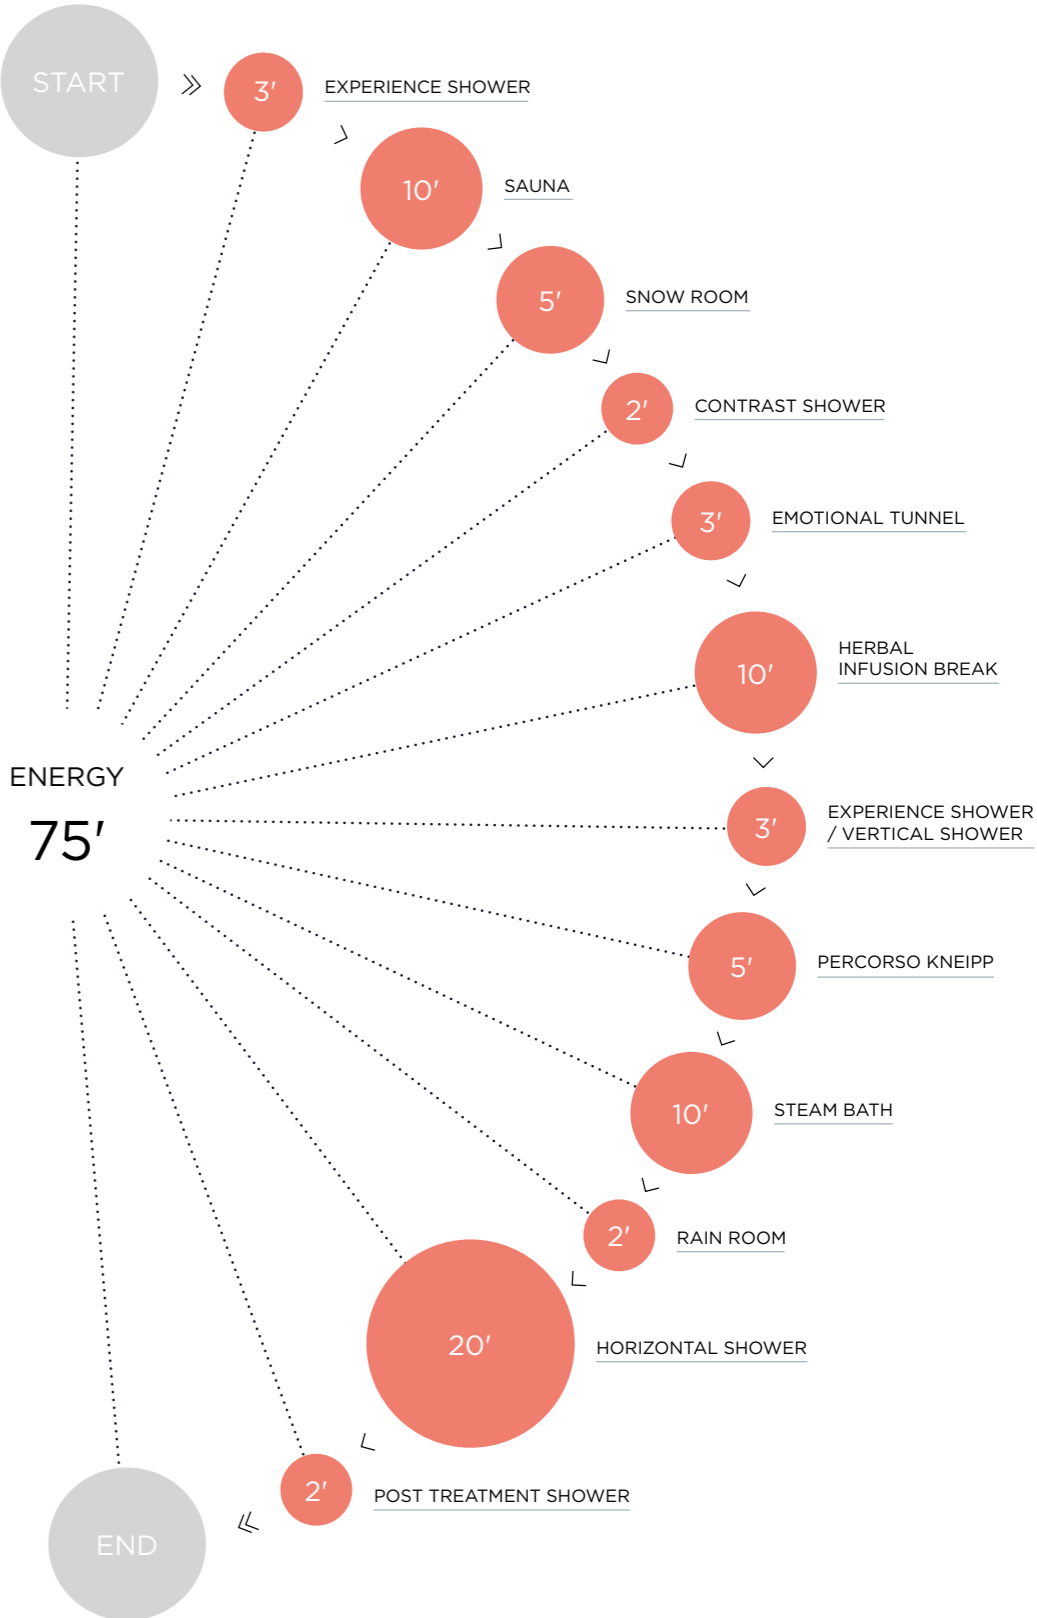

Explore SPA journey with integration of Water Experiences

This journey sequences a series of experiences, incorporating a significant number of water-based treatments designed to soothe and rejuvenate. These experiences harmoniously build upon each other, creating an overall effect that profoundly relaxes and revitalizes guests. The journey is stress-free, with each experience being prolonged to allow deep relaxation, and abrupt changes in temperature are avoided to ensure a smooth and calming transition between treatments.

This journey sequences a variety of experiences, incorporating several invigorating water-based treatments. These dynamic experiences build on each other to create an overall effect that significantly revitalizes and energizes guests, leaving them feeling refreshed and rejuvenated. The experiences are used intensively, with temperature contrasts employed to create a truly invigorating effect, ensuring that each treatment boosts energy levels and promotes a sense of vitality.

The core principles of aquaform water experiences

Each aquaform product is designed to provide a specific experience and to be strategically positioned within the SPA, either complementing other equipment or representing self-standing hydrothermal journey on their own. Thanks to our expertise, we have developed solutions that harmoniously combine the fundamental principles of water experiences, enriching and enhancing the wellness journey offered by other products within the SPA.

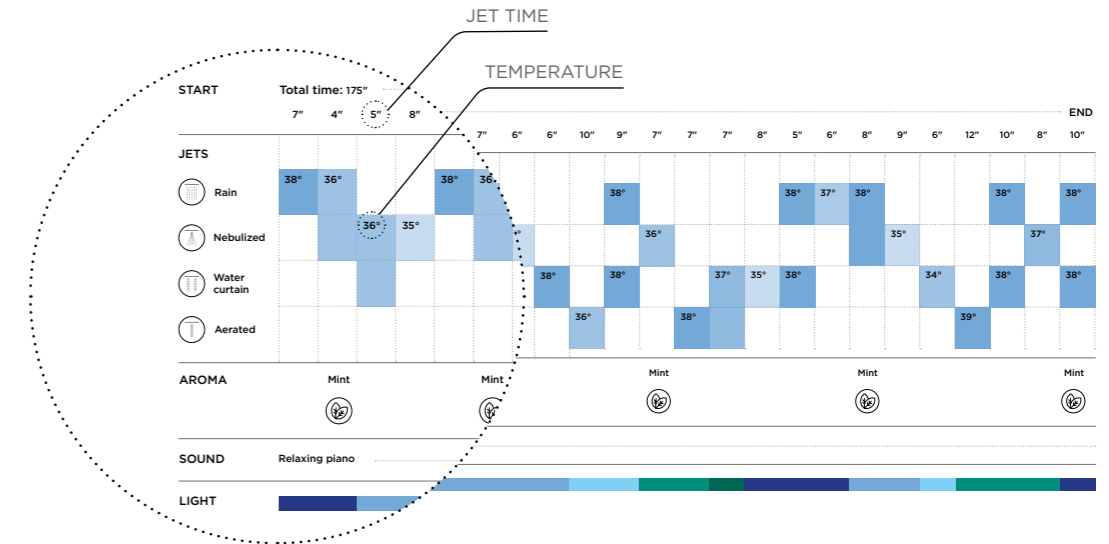

Our products are defined by two key frameworks: scenarios and programs. They are meticulously designed to work synergistically with each other and integrate seamlessly with other treatments and areas within the SPA.

Program

These are meticulously crafted sequences that blend various scenarios to create a cohesive and diverse wellness journey. Each program is thoughtfully designed to offer a multisensory experience that unfolds through different phases, emotionally engaging guests and guiding them on a personalised journey tailored to their needs and preferences. The programs are unique and distinctive, enhancing the overall sense of well-being and delivering

a holistic and impactful experience that is truly special for the guest. Each water experience is meticulously crafted to integrate specific scenarios and programs, ensuring a wellness offering that aligns perfectly with the SPA environment and collaborates effectively with other products. This approach guarantees a comprehensive and personalized experience that meets the diverse sensory and therapeutic needs of clients.

How to read a program

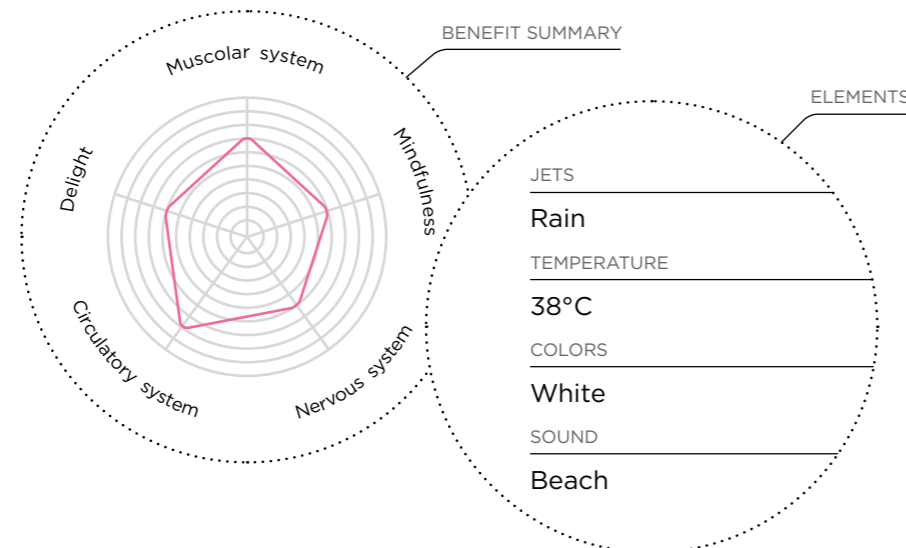

Scenario

Scenarios are individual, linear experiences crafted to provide unique and well-defined moments of wellness. Each scenario features a single water jet, configured with specific parameters such as light, fragrance, sound, temperature, and duration, creating a straightforward

yet comprehensive experience. These scenarios are intentionally designed to complement other treatments, such as massages or saunas, offering a sensory experience that seamlessly integrates into the overall wellness journey.

How to read a scenario

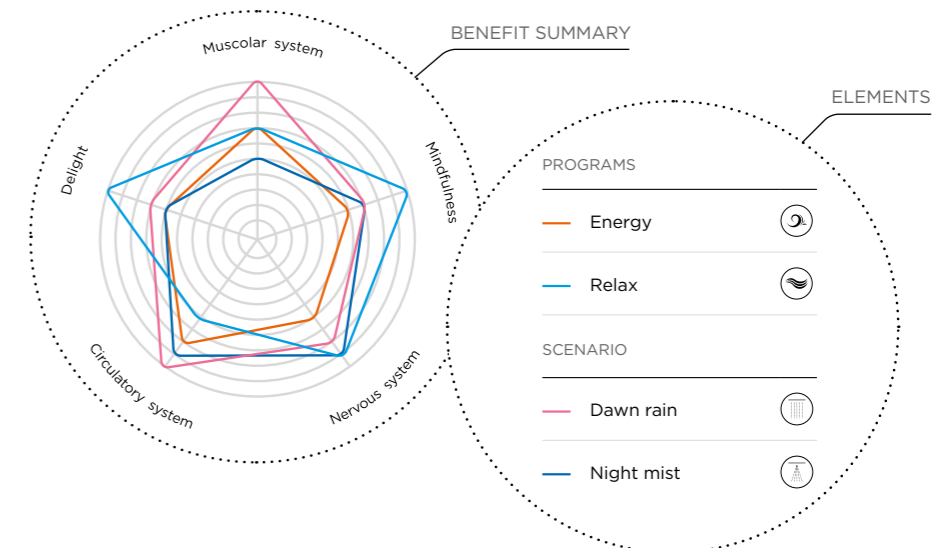

Water experiences chart

Each water experience is designed to deliver psychophysical benefits. These benefits are present across all experiences, though their intensity may vary depending on the chosen configuration. Some water experiences may emphasise certain benefits more than others. To clarify how each water

experience contributes to these benefits, we have created a chart representing the five main benefits. This chart illustrates how each experience focuses on these benefits, providing a clear overview of the impact and effectiveness of each water experience in the overall wellness journey.

How to read a chart

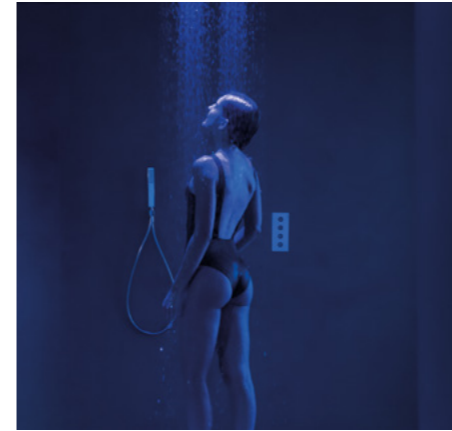

WATER

WATER AREA

The water area within spas is a dedicated environment for wellness experiences involving the strategic use of water. The water area is designed to offer a variety of hydrotherapy and relaxation experiences, contributing

to the physical and mental well-being of guests through heat, steam, and humidity. This area is often regarded as an essential element within a spa, providing a serene and rejuvenating environment.

SENSUS

The experience shower embodies a multisensory journey that engages the senses, allowing for unique experiences that evoke moments tied to the human experience and connection with nature. This innovative approach to body care utilizes elements such as water, lights, aromas, and sounds to create an immersive and authentic atmosphere. The system, known as "Sensus," is designed to offer the user four distinct experiences, with each designed to offer specific body reactions connected to the spa journey. Two primary scenarios are the "warm rain" and the "cool mist," each designed to offer specific body reactions connected to the spa journey. Additionally, two dynamic programs are available, allowing the user to customize the experience based on their mood and desired objectives. These programs can provide an energizing treatment to stimulate the body and mind or a relaxing treatment to promote well-being and peace. The experience shower with Sensus thus represents an innovative and personalized way to approach one's wellness journey, offering a complete range of sensations and responses that adapt to the needs and individual goals of the user.

DIAGRAMS

PROGRAMS

- Energy 
- Relax 

SCENARIO

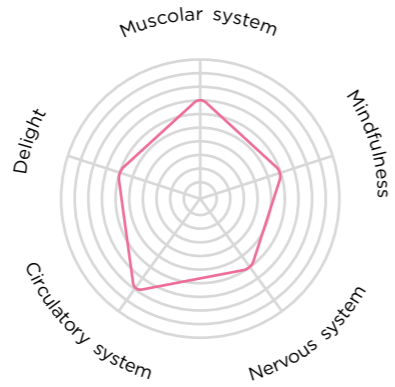

- Dawn rain 
- Night mist 

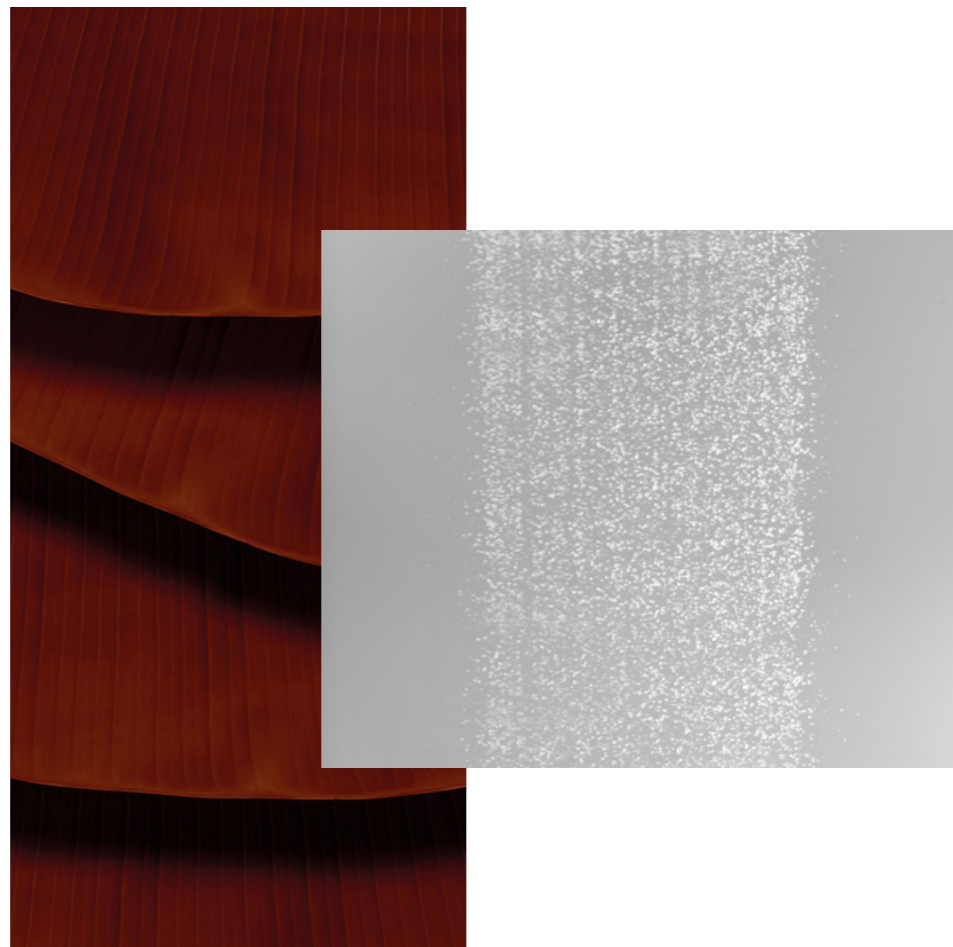

DAWN RAIN

The dawn rain scenario within a spa is designed to enhance the overall wellness experience, providing benefits both physically and mentally. This particular environment can serve as a preparatory phase for other thermal treatments, such as saunas or steam baths, facilitating the gradual adaptation of the body to higher temperatures. Warm water has the ability to open the pores of the skin,

aiding in the cleansing process and removal of impurities. This aspect harmoniously integrates into the beauty treatments and skincare offered within a SPA. The enveloping sensation of immersing oneself in warm water not only contributes to a pleasant state of physical relaxation but also plays a fundamental role in preparing the mind for a day dedicated to wellness.

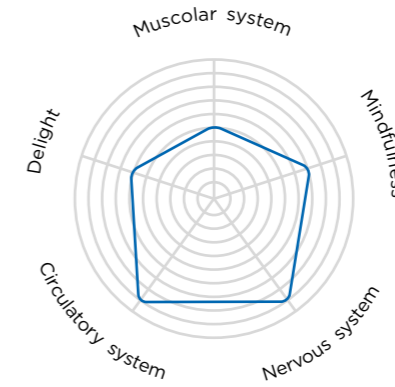

- JET _____
- Rain _____
- TEMPERATURE _____
- 38°C _____
- LIGHT _____
- White _____
- SOUND _____
- Beach _____

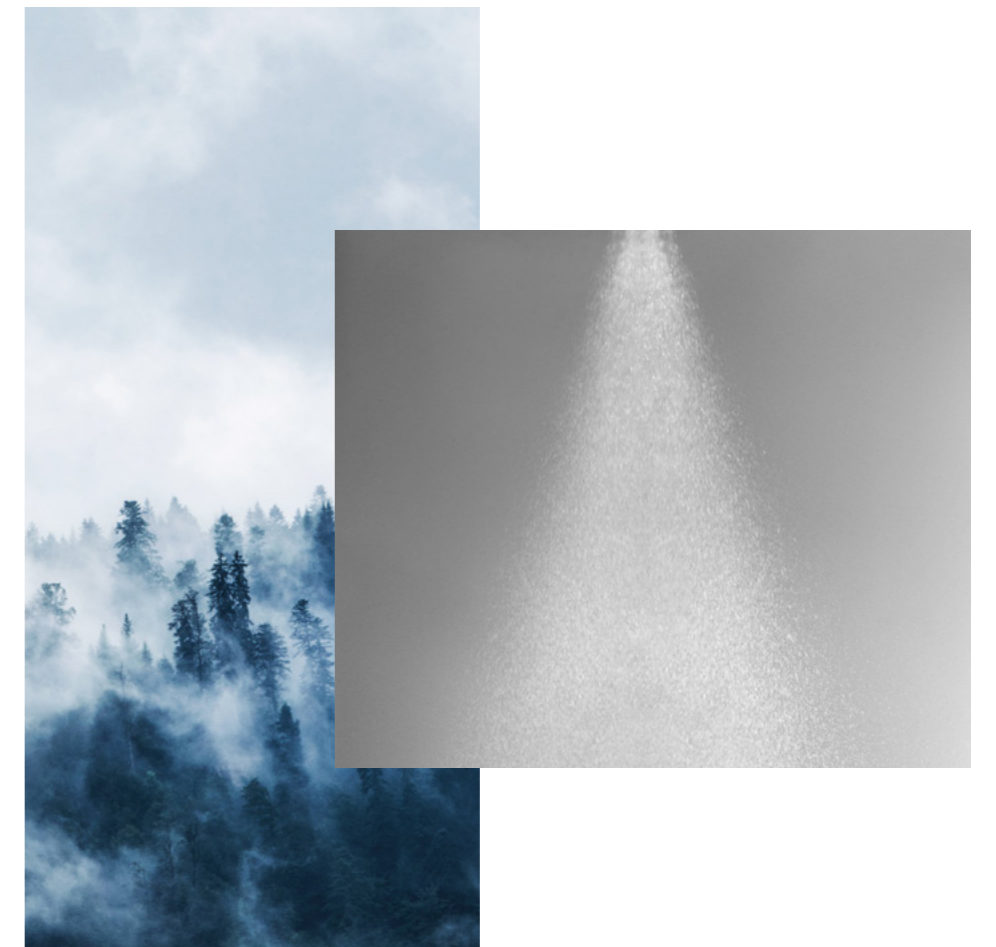

NIGHT MIST

Cold nebulisers within a spa enhances the thermal experience, providing various benefits for skin, circulation, and mental state. This element refreshes the skin, particularly valued after hot treatments, and stimulates blood circulation, improving tissue oxygenation and aiding muscle recovery. Mint aromatherapy enhances the experience, offering a fresher sensation. The blend

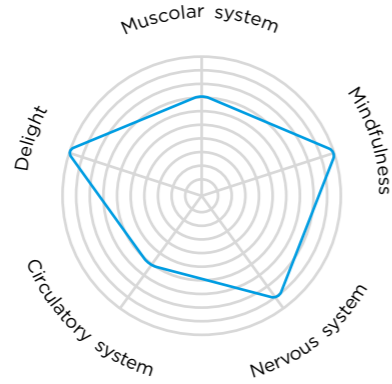

of cold mist and mint aroma creates a revitalizing, multisensory environment, enhancing overall well-being and leaving guests feeling rejuvenated and invigorated.

- JET _____
- Nebulized _____
- TEMPERATURE _____
- 24°C _____
- LIGHT _____
- Blue _____
- AROMA _____
- Mint _____
- SOUND _____
- Jungle _____

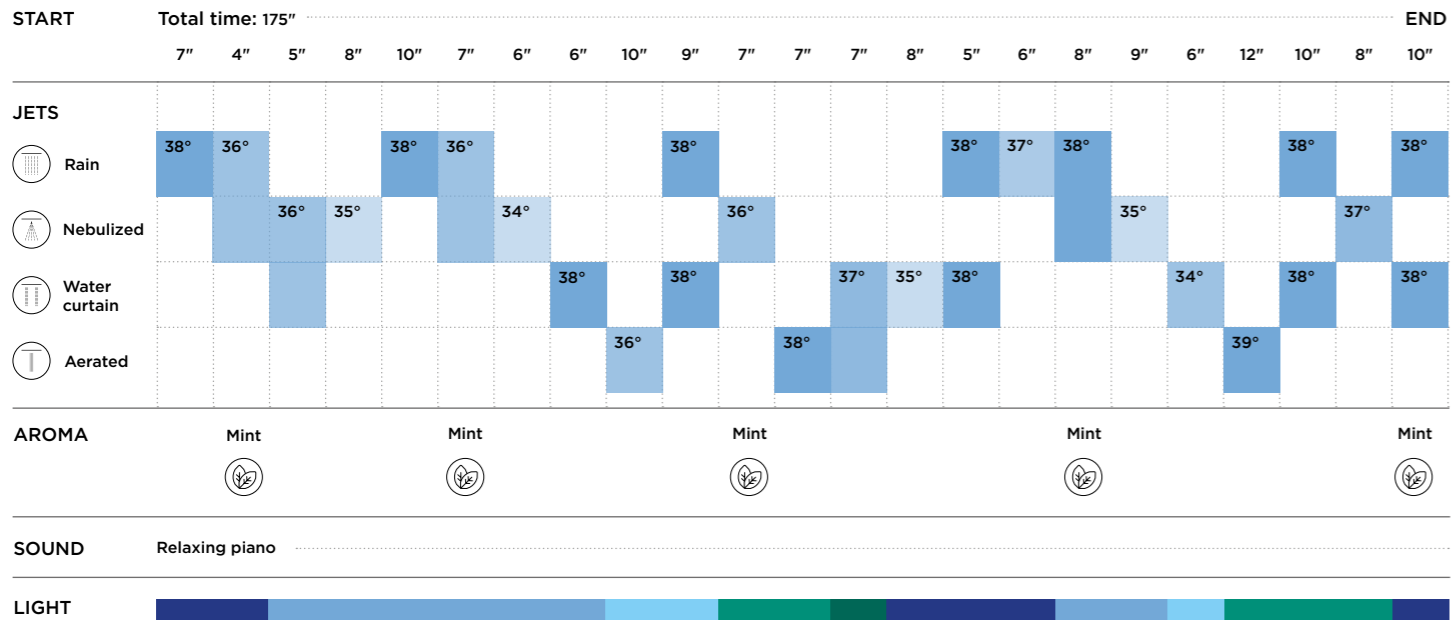

RELAX

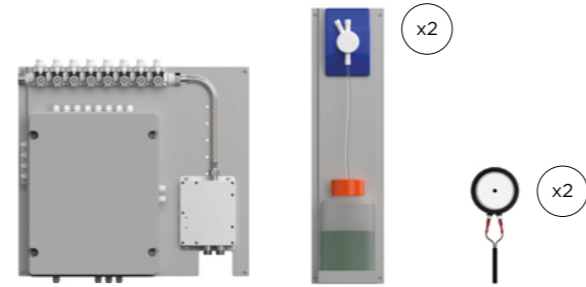

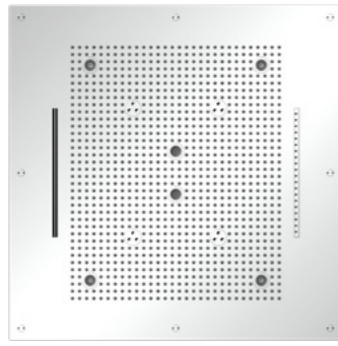

The relax program has been designed to offer a complete experience of relaxation for both the body and the mind. The water pressure is soft and balanced, temperatures have not significant variation, creating a thermal environment that promotes body equilibrium. Chromotherapy plays a fundamental role in this program, using colors such as blue, indigo, and azure and all their associated shades. This chromatic selection aims to induce a mental state of deep relaxation, helping to create a soothing and calming atmosphere. Sound and aromatic

elements are carefully chosen to envelop the user in a sensation of serenity. Sounds like the gentle touch of a piano or the relaxing sound of light rain, along with fresh aromas, intensify the relaxation feelings, engaging all the senses in a harmony. In this context, the relaxation program offers a refuge of serenity and well-being, providing a precious opportunity to restore balance to the body and mind.

Flexibility

One of Sensus’s most notable features is its exceptional flexibility, facilitated by a sophisticated electronic control unit. This allows spa consultants to **customize sequences extensively, tailoring experiences to suit individual preferences and specific wellness goals**. Such flexibility empowers spa consultants to create truly personalized and memorable experiences for their clients, enhancing overall satisfaction and well-being.

Multisensory integration

Sensus seamlessly integrates various **sensory elements** such as chromotherapy, aromatherapy, and ambient sounds. This integration fosters a **comprehensive experience engaging multiple senses**, promoting relaxation and well-being.

Energy efficiency

Sensus is meticulously designed with a specific focus on energy efficiency, incorporating advanced technologies and materials to reduce overall energy consumption and promote **environmental sustainability**. A key element of this design is the use of exclusive liquid silicone membranes, which help limit **water consumption** without compromising the user experience. This feature not only conserves water resources but also ensures that the user can enjoy an excellent experience without waste. The integrated lighting in the experience shower is engineered for remarkable energy efficiency. Each **spotlight consumes only 3 watts**, comparable to the use of a traditional light bulb. This not only reduces overall energy consumption but also helps keep operating costs low and minimize environmental impact

Quality materials

Construction involves the use of high-quality materials. These materials are chosen to ensure product durability and resistance to the **effects of moisture and water**.

Style and design

Style and design are characterized by universal adaptability to all architectural situations. Its **minimal and contemporary** style allows it to seamlessly integrate into various environments, both modern and traditional. Its versatility is further emphasized by the option to **customize finishes**, offering flexibility to suit different preferences. Customizable finishes allow SENSUS to reflect the desired style and atmosphere, making it a versatile choice ideal for a variety of settings, from **luxury wellness** centers to minimalist and modern environments.

SPATIUM

The Spatium Rain Walk provides a journey through a blend of sensory experiences, transforming the traditional SPA into an immersive adventure. This feature invites users to explore a range of emotional landscapes through the integration of water, light, aroma, and sound. Users begin their experience with a dynamic array of water jets, varying in intensity and water patterns. The journey is enhanced by lighting that amplifying the sensory impact. Aromatic elements releasing selected scents that blend with the water and light, creating a atmosphere that soothes and invigorates. Soundscapes further enrich the experience, with curated audio elements like flowing water and calming melodies providing a rhythmic backdrop that aligns with the visual and tactile sensations.

DIAGRAMS

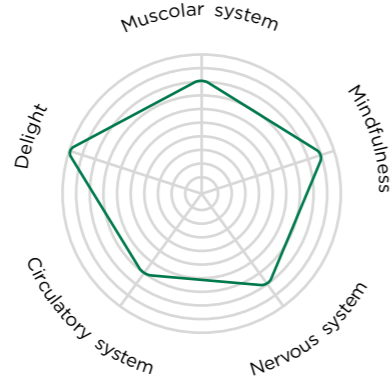

PROGRAMS

- Promenade

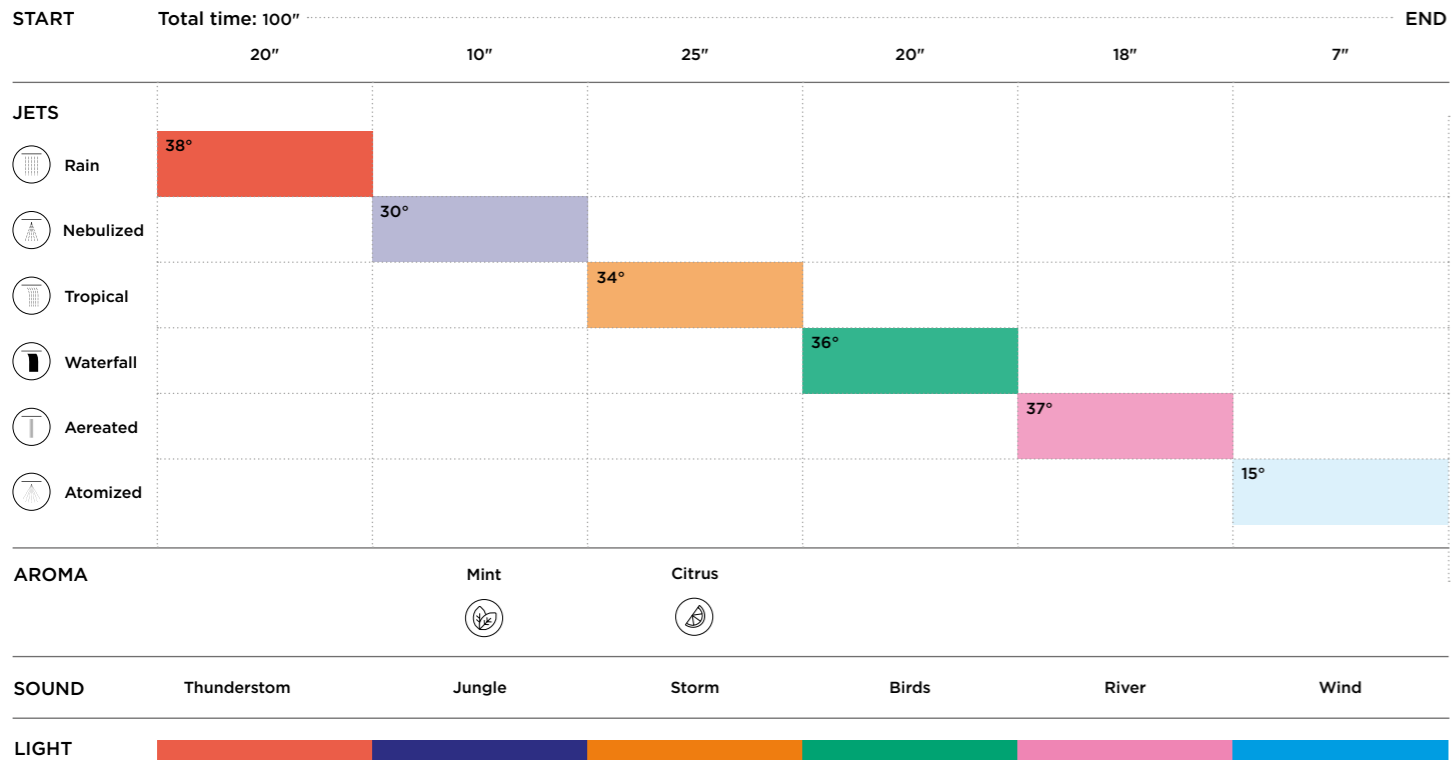

PROMENADE

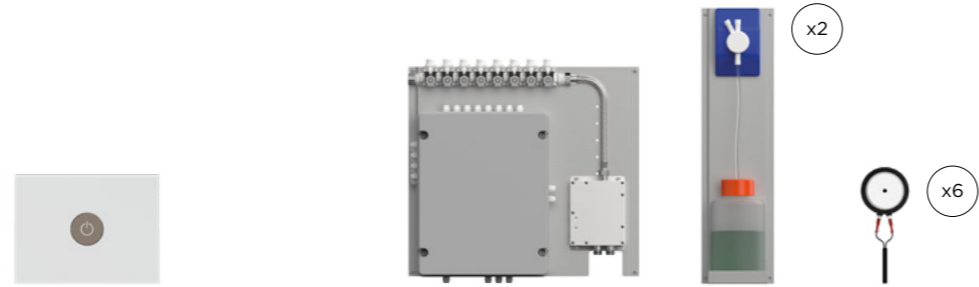

The promenade program within the emotional tunnel offers a multi-sensorial experience, allowing guests to encounter a wide range of sensations, from delicate atomized jets to more vigorous jets. This sensory diversity is crafted to create an engaging and stimulating experience. Chromotherapy, integrated into the path, acts as a powerful amplifier of the emotional atmosphere, transforming the space and intensifying the overall sensory experience. The selected colors can emotionally influence people, aiding in creating an environment that adapts to the various stages of the journey. The

aromas permeating the spatium provide an additional layer of experience. These subtle fragrances gently impact mood, adding an olfactory dimension to the walk and assisting in modulating the perception of the surrounding environment. Lastly, the sounds accompanying the journey are carefully chosen to craft an enveloping and harmonious auditory atmosphere. From soothing melodies to natural sounds like the rustling of water or birdsong, the diverse soundtrack contributes to completing the experience, stimulating hearing, and enriching the emotional connection with the environment.

Promotion of thematic programs

The emotional tunnel can be integrated into special thematic events in the spa, offering creative opportunities to engage guests in *unique experiences* by modifying the program.

Attraction for new clients

The presence of an rain walk can differentiate one spa proposal from competitors, attracting new clients eager to experience an *innovative approach* to well-being.

Asset

The architectural aspect plays a crucial role in ensuring a unique and lasting experience for visitors. In this context, the customization of the premises is fundamental, allowing variations in the path and the *creation of tailored zones to meet different needs*.

Cutting-edge technology

The rain walks are equipped with advanced electronic control units for *sophisticated management* of the eight steps. The technology also allows for customization according to spa consultants' or managers' wishes.

VITALIS

Vitalis Kneipp walk represents an innovative wellness experience characterized by the use of wall jets that deliver hot and cold water. This path offers a unique sensory experience, further enriched by the presence of integrated RGB LED spotlights. The control unit provides advanced automatic interactivity by controlling water temperatures and timings.

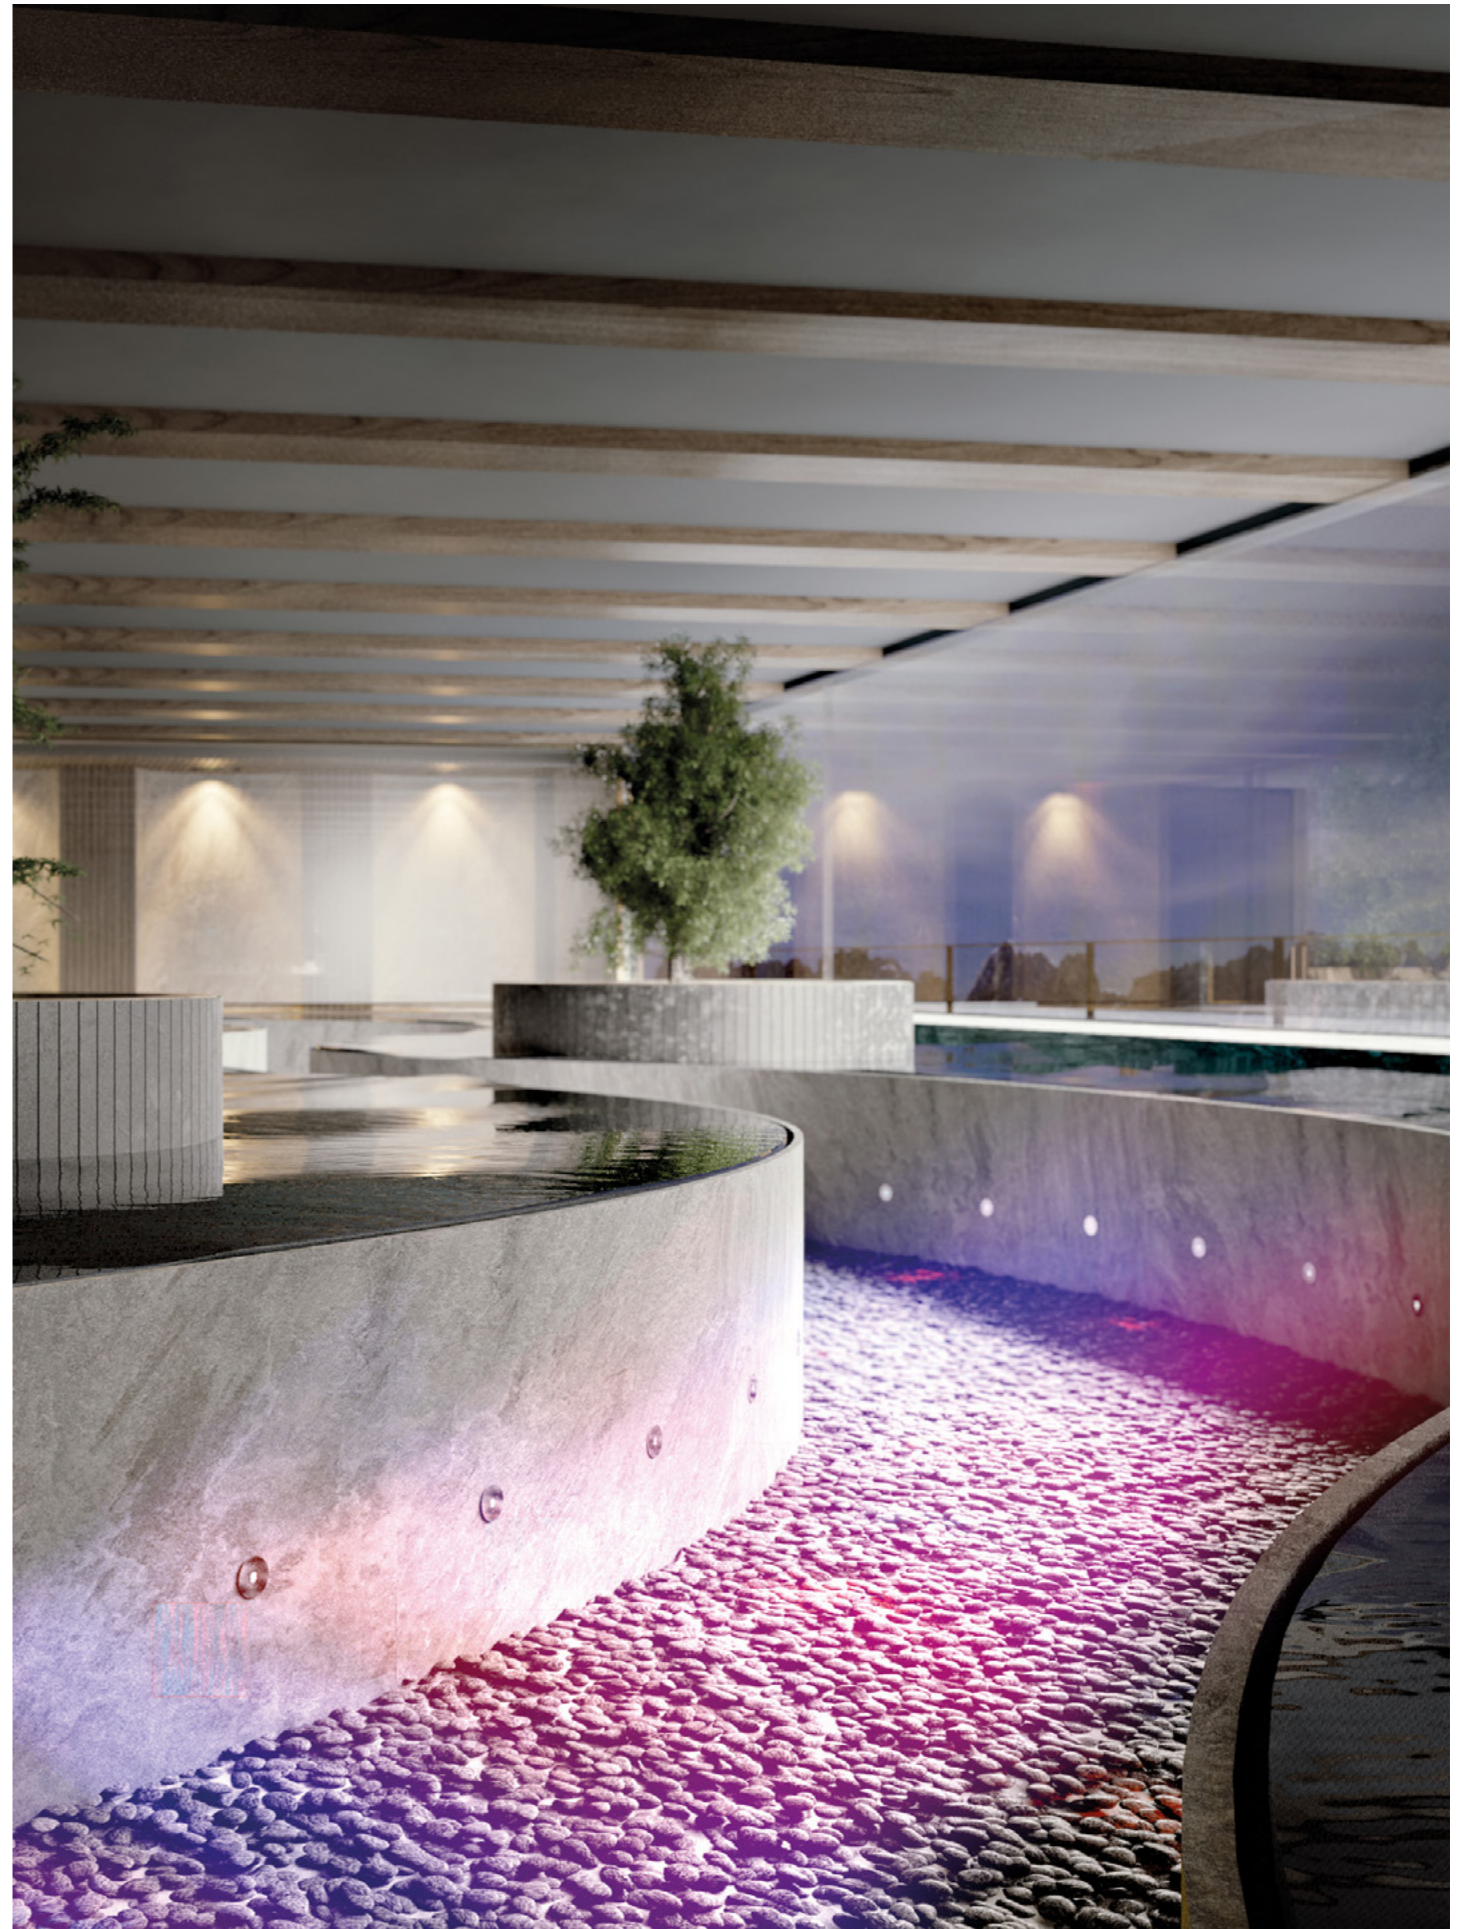

DIAGRAMS

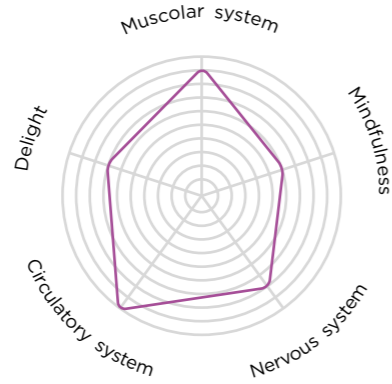

PROGRAMS

— Ying yang 

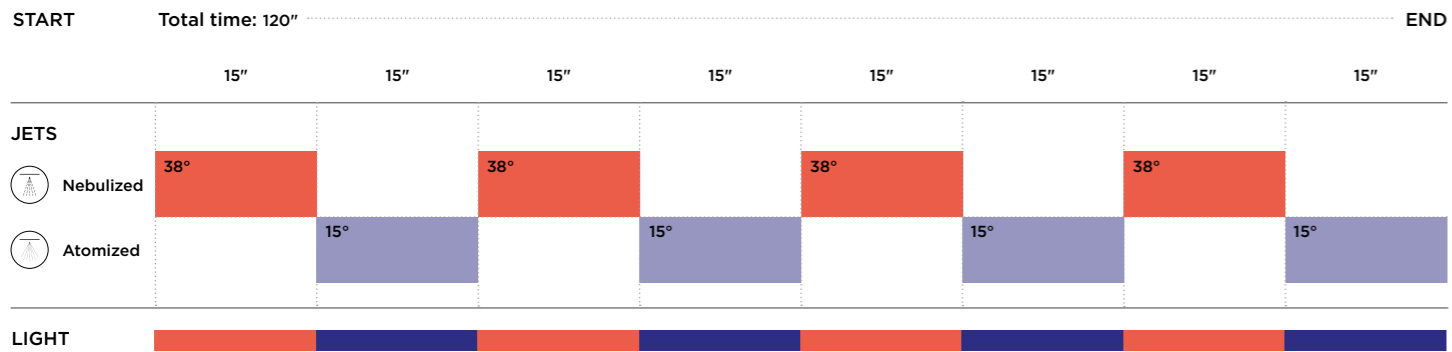

YING YANG

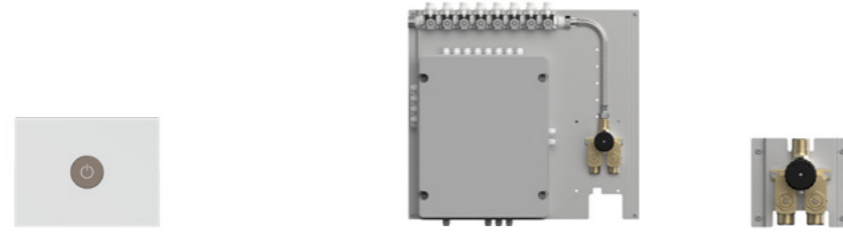

The Ying yang program is carefully designed to create a dynamic journey within the SPA that exploits the alternation of hot and cold jets with specific objectives aimed at physical well-being and immune system reinforcement. This sequence of different temperatures stimulates the circulatory system through the principle of vasoconstriction and vasodilation. The combined effect of heat and cold contributes to improving blood circulation and can aid in enhancing microcirculation, bringing nutrients

and oxygen to tissues. The dynamic experience can help release tension and promote a state of calm and well-being.

Energy saving

The dry kneipp walk requires less energy since it does not need to maintain two constant temperatures. This energy efficiency can result in **lower operating costs** for the facility.

Water saving

Since the dry kneipp walk does not involve the use of water in tubs, there are significant water savings, particularly important in contexts prioritizing **water resource conservation**.

Low maintenance

The dry kneipp walk requires lower maintenance since there are fewer complications related to **cleaning and maintaining the tubs**.

Operational flexibility and high efficiency

The dry kneipp walk can be activated instantly as needed, ensuring an **immediate response to guest presence**. This contributes to greater user satisfaction as guests can use the path whenever they desire.

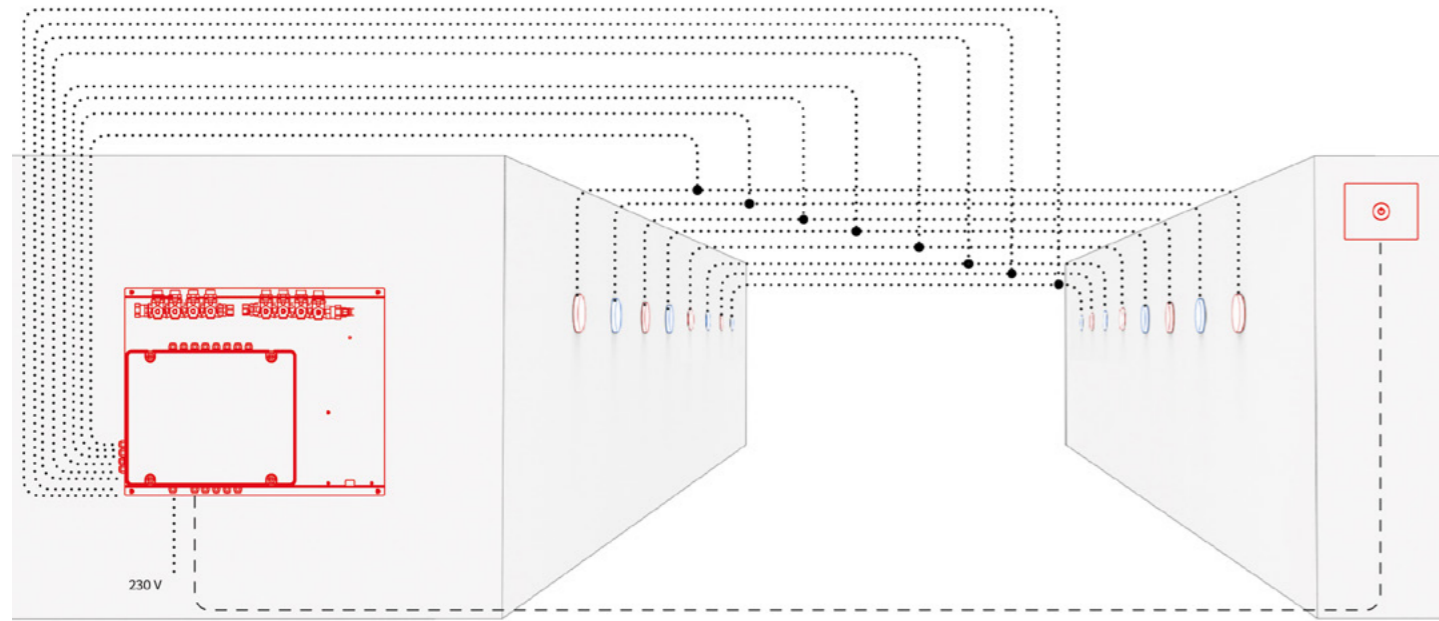

Customized wellness program

Incorporate the kneipp walk into customized wellness programs based on the specific needs and desires of guests, including **adjustments to water temperatures and durations in each section**.

HELVETICA

The Swiss Shower offers an extraordinary fusion of the elegant experience of the emotional shower and the toning benefits of targeted massage. Completely enveloping the person with water, this experience provides a invigorating and refreshing effect on the muscles through its water jets. The heart of the Swiss Shower lies in its lateral jets, carefully designed to provide a toning massage to specific areas of the body. This targeted approach is ideal for releasing accumulated muscle tension, offering effective relief and contributing to overall relaxation. The combined effect of the emotional shower and the lateral jets also promotes the reactivation of blood circulation. This stimulating process is essential for improving the flow of nutrients and oxygen to the tissues, promoting a sensation of vitality and well-being. What makes the aquaform Swiss Shower even more extraordinary is the presence of 4 distinct dynamic programs: Sport, Relax, Balance, and Energy. Each program has been specially designed to offer a personalized treatment, catering to the diverse needs of users. Whether it's promoting muscle recovery after physical activity, creating a relaxing atmosphere, maintaining balance, or energizing the body, the Swiss Shower adapts to every mood and objective.

DIAGRAMS

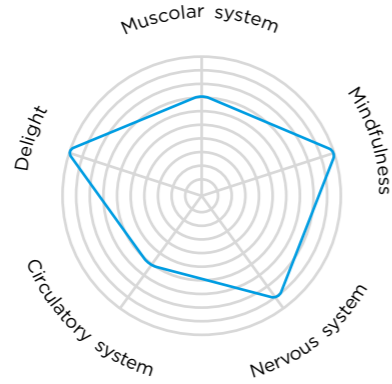

PROGRAMS

- Relax
- Energy
- Balance
- Sport

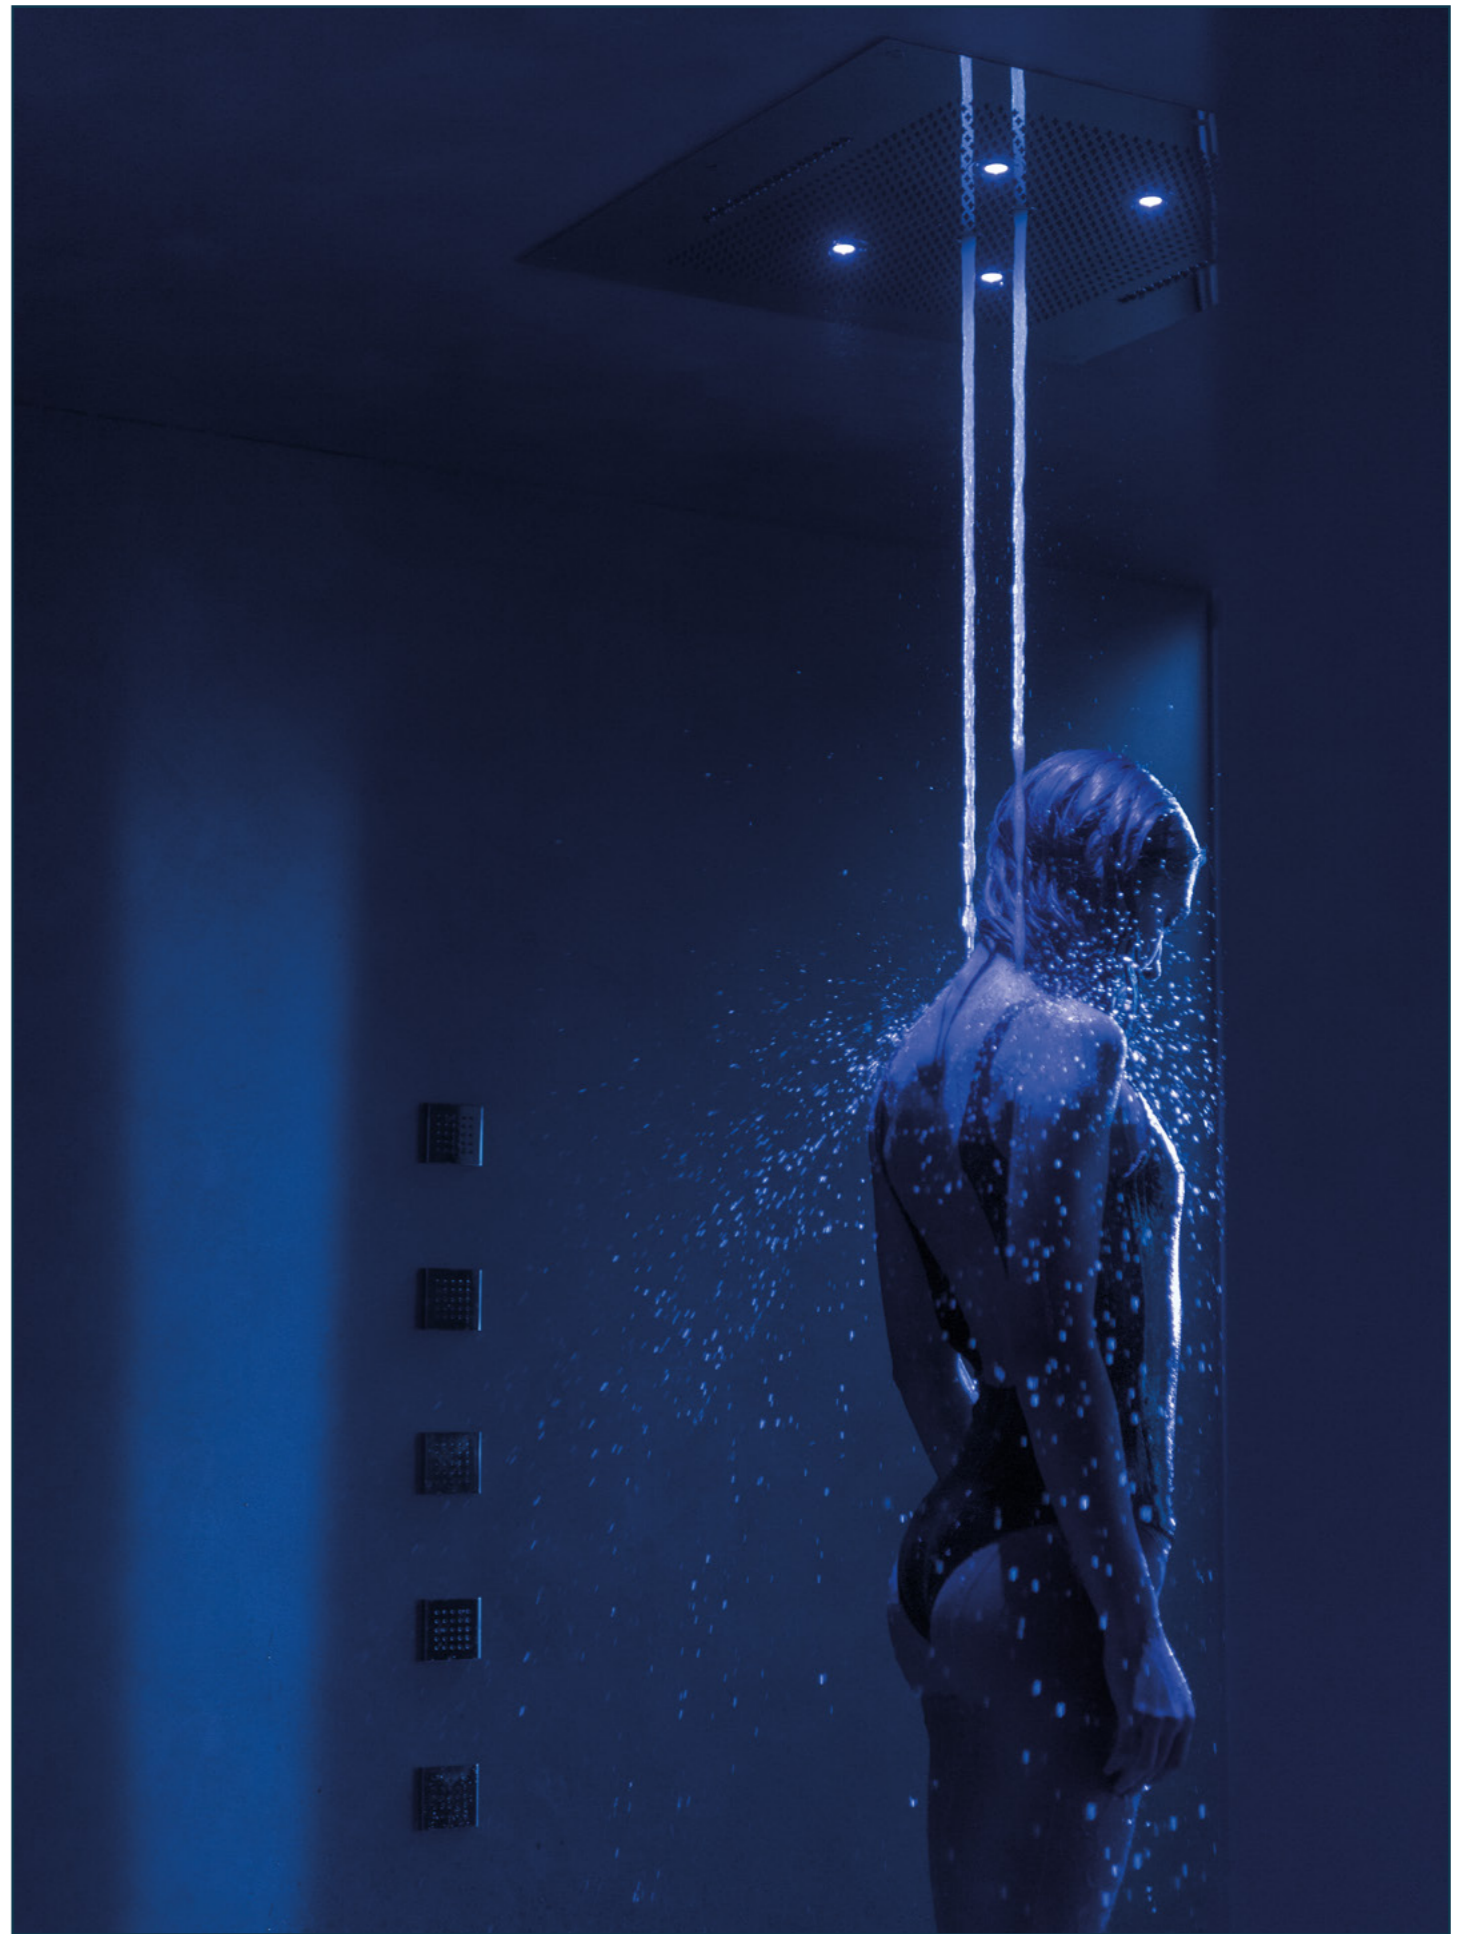

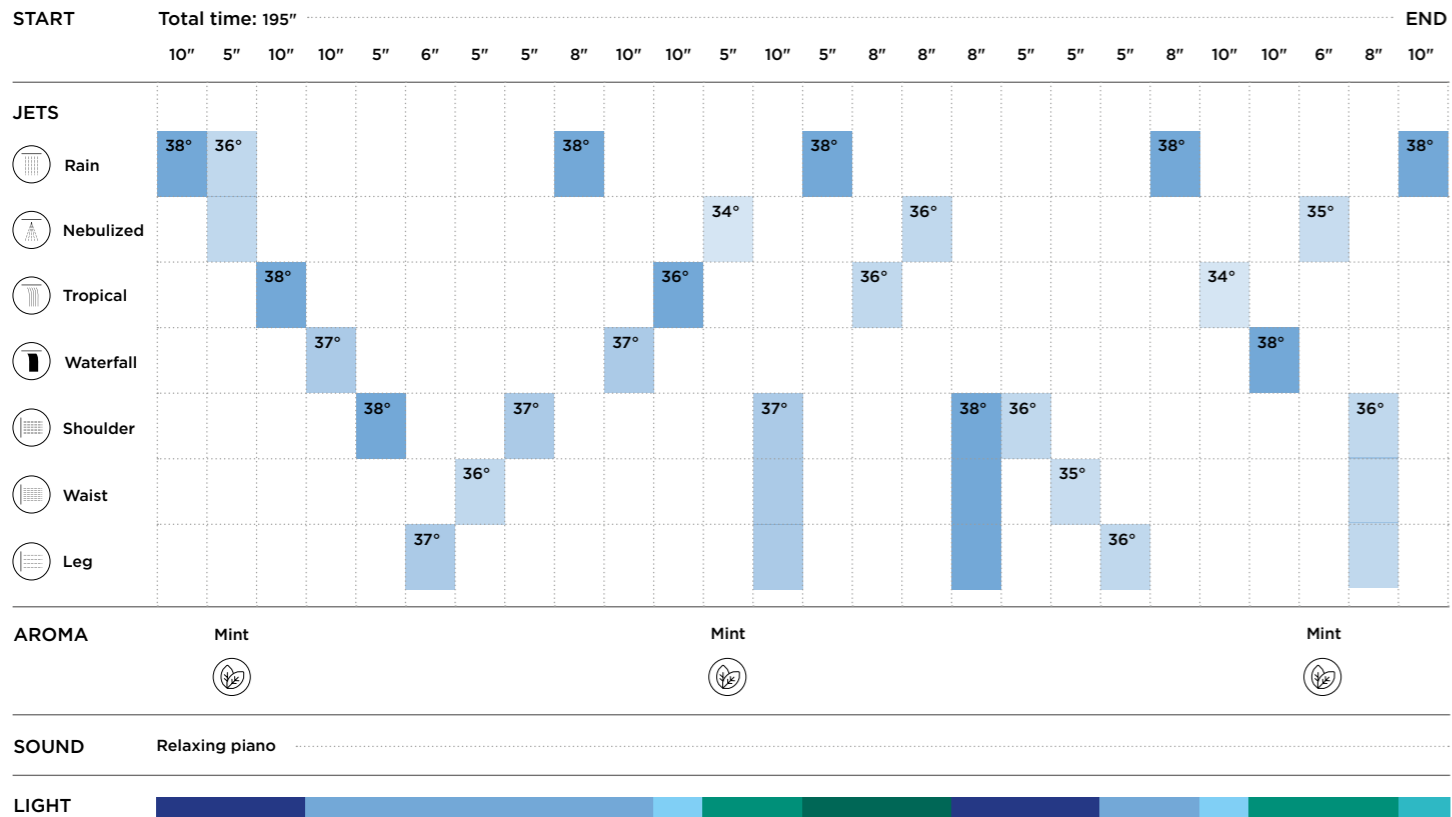

RELAX

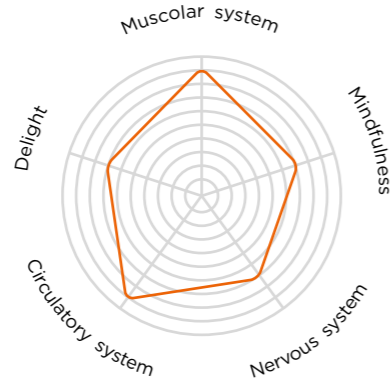

The 'Relax' programme is a meticulously crafted experience to induce deep relaxation and awareness through a harmonious blend of calming effects. This programme aims to cultivate a deep sense of calm and tranquillity using warm water temperatures, gradual and subtle transitions and a carefully curated colour palette dominated by serene blues and greens. During the 'Relax' programme, sequenced water jets gently caress the body, focusing on different areas to provide a soft, enveloping massage. These expertly orchestrated sequences promote

muscle relaxation and the release of tension, encouraging a state of physical and mental rest. The incorporation of cool, calming tones such as blue and green enhances the programme's calming effects. These colours are known to have a calming influence on the mind, potentially lowering heart rate and blood pressure and promoting a sense of balance and serenity. The interaction of gentle water pressure and calming colour therapy creates an immersive environment that promotes stress reduction and mental clarity.

Example of HELVETICA 70

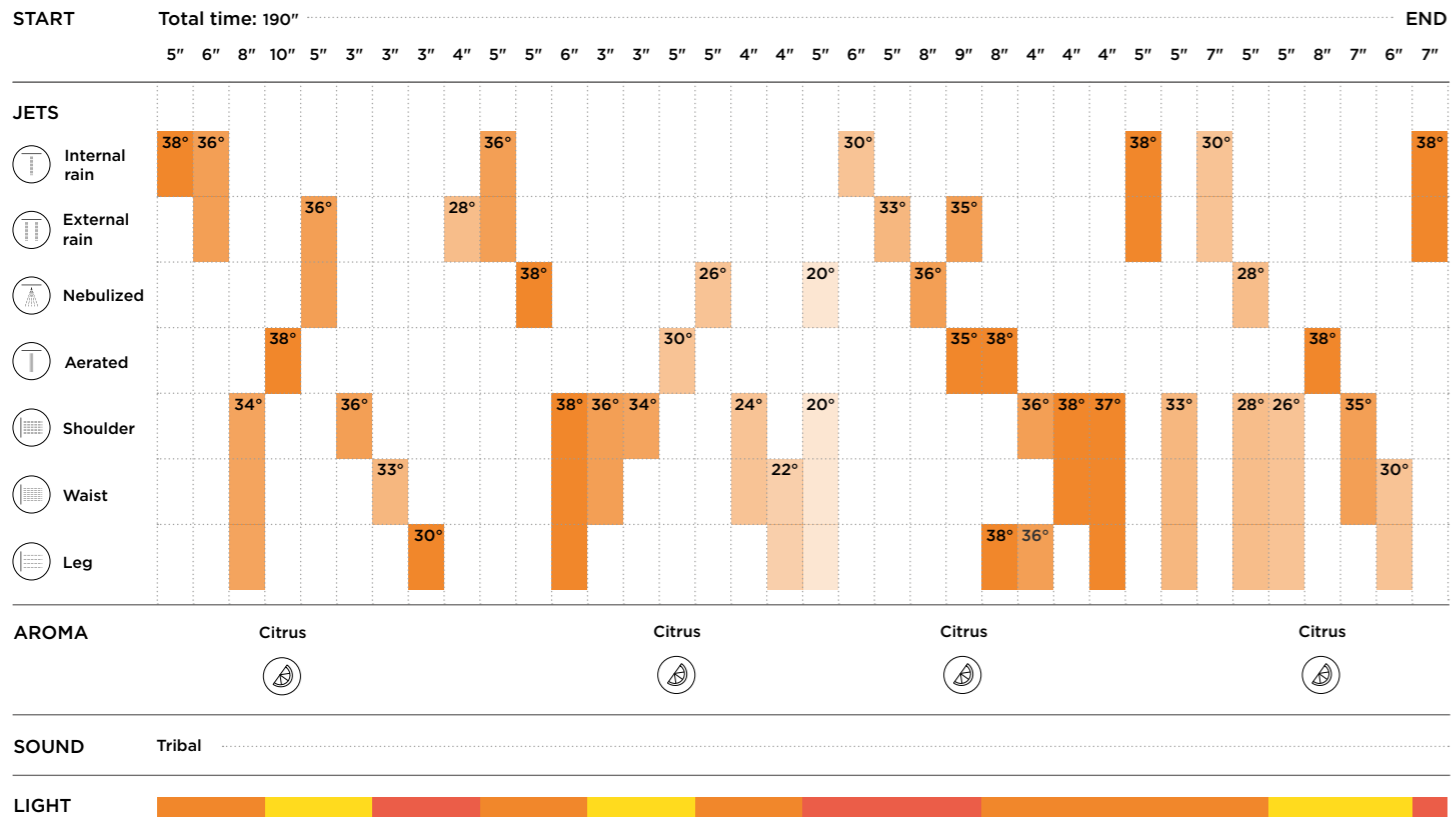

ENERGY

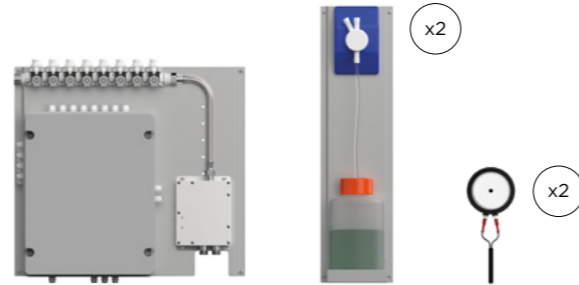

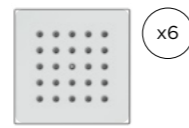

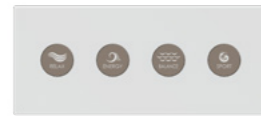

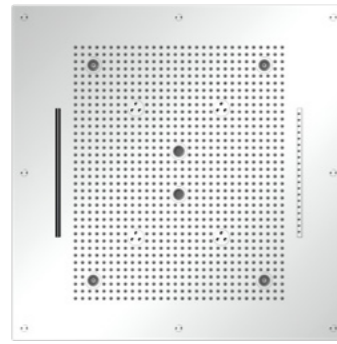

The energy program is an experience specially designed to provide energy and vitality, using a combination of dynamic and stimulating elements. This program aims to awaken the body and mind through frequent changes in temperature, dynamic sequences of overhead and lateral water jets, and the use of alternating warm and cool colors. During the "Energy" program, dynamic sequences of high-pressure water jets are performed on the body. These sequences, focused on different parts of the body, offer a vigorous and invigorating massage. The use

of alternating warm and cool colors contributes to creating a lively and dynamic atmosphere. Warm colors, such as red and orange, can stimulate and energize, while cool ones, like blue, can refresh and invigorate.

Versatility

Helvetica can be easily integrated into different spa settings, as part of a thermal circuit or as a specific treatment. Its versatility makes it **adaptable to various stages of a spa session**.

Flexible and customizable

Helvetica offers various programming and adjustment options, allowing users to **customize the experience** according to their preferences. This makes the shower suitable for different needs and **individual preferences**.

Thermal contrast

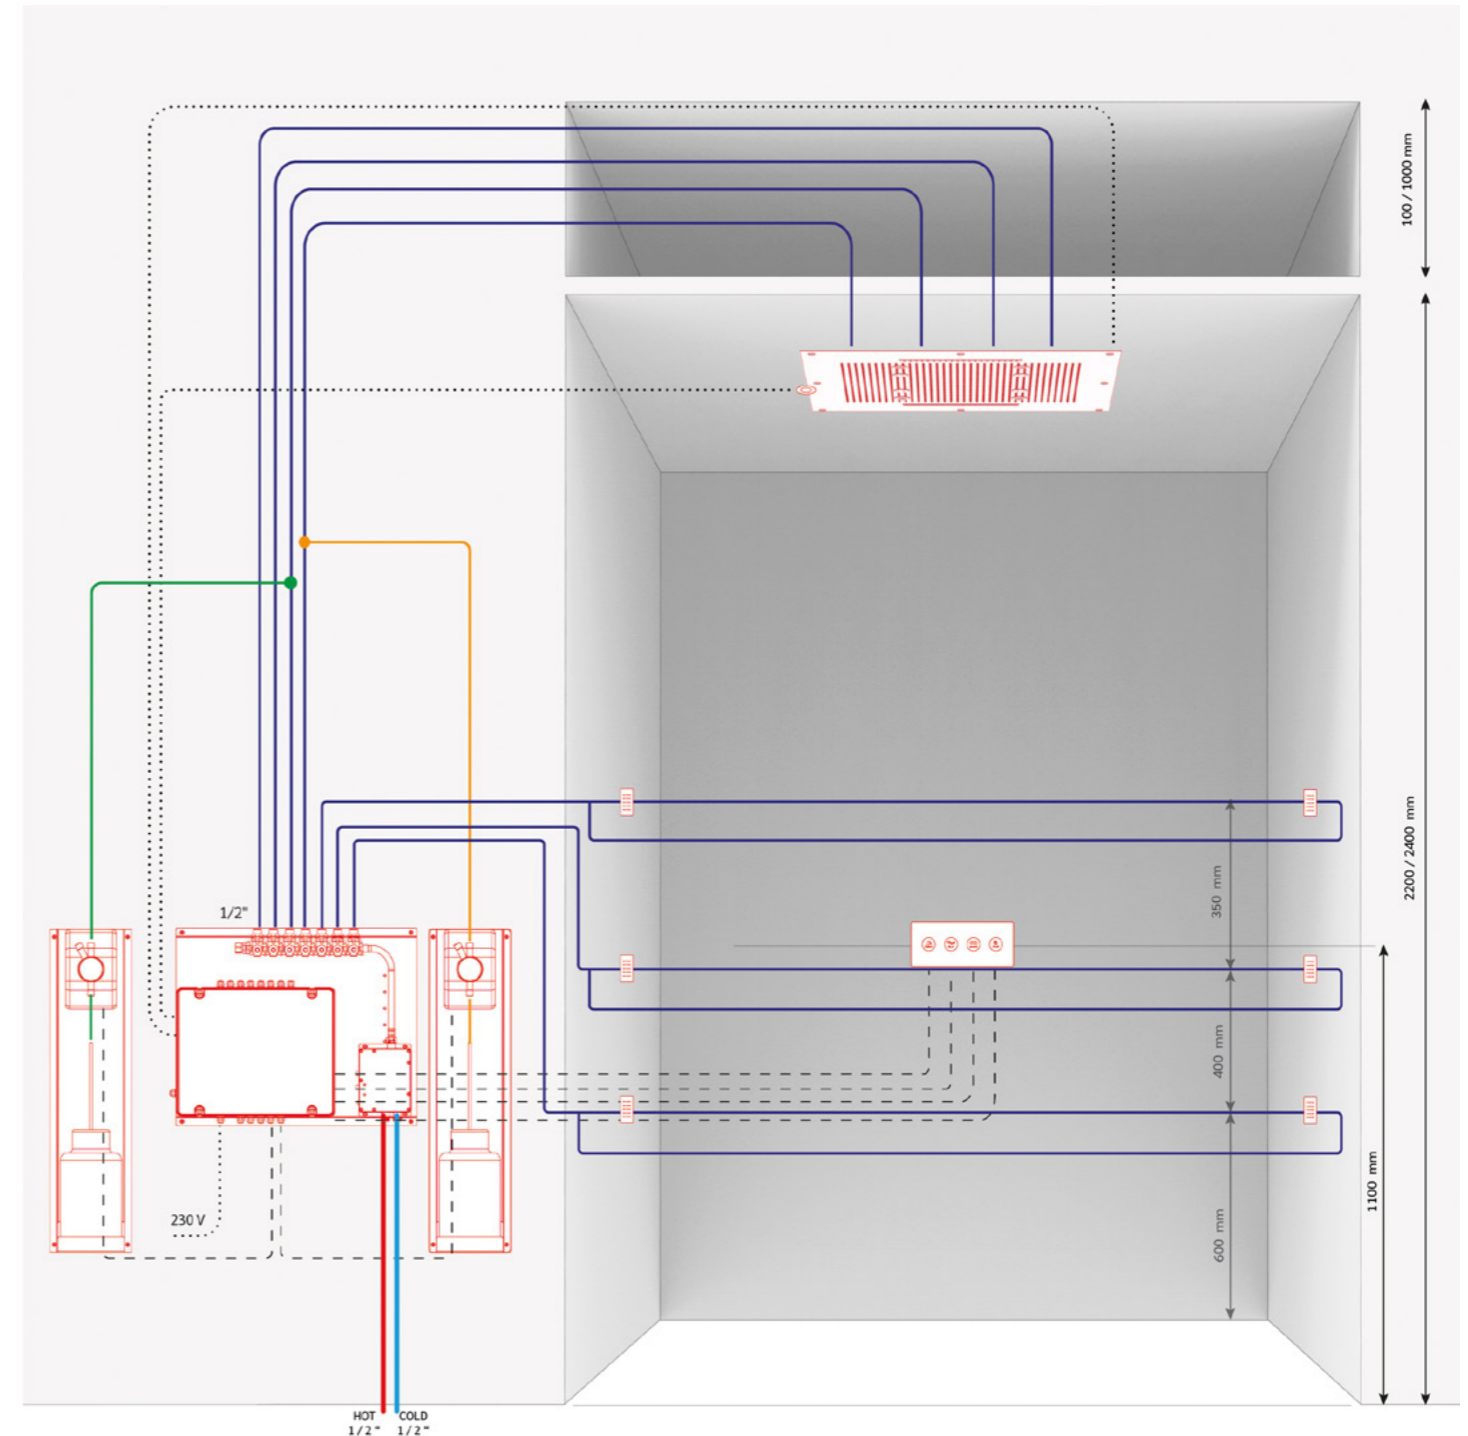

Helvetica's programs excel in delivering thermal contrasts, effectively producing a wide range of **physical benefits** associated with this technique. The system's precise temperature control and strategic application of heat and cold stimuli **maximize the therapeutic impact**, enhancing circulation, reducing inflammation, and promoting overall wellness.

Muscle recovery

Helvetica features a specialized program that harnesses relatively low temperatures in conjunction with **high-pressure water jets**. This unique combination, delivered through carefully designed sequences, effectively **releases muscle tension** and enhances flexibility. The program is particularly beneficial for shortening physical recovery time after sports activities, making it an invaluable tool for athletes and fitness enthusiasts.

PLANTA

The Planta foot bath with four lateral jets is a treatment designed to offer a relaxing and healing experience for the feet. The four lateral jets provide targeted massage to the feet and ankles. The water impulses stimulate blood circulation, helping to reduce muscle tension and alleviate any swelling.

Planta offers three distinct treatment options: hot, cold, and an energetic program that alternates between hot and cold. This versatility enables users to tailor their experience to their needs, enhancing both relaxation and revitalization. The warm treatment soothes and relaxes, the cold treatment refreshes and reduces inflammation, and the alternating program invigorates and energizes the feet.

DIAGRAMS

PROGRAMS

SCENARIO

— Hot

— Cold

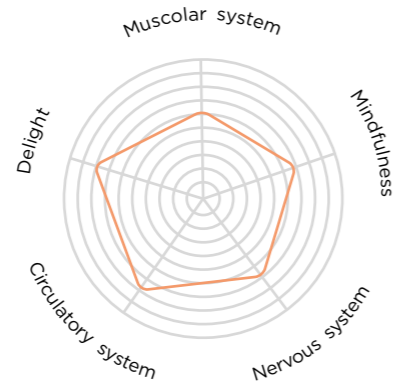

SCENARIO 1 HOT

WARMING MESSAGE

The Planta Warming Massage scenario creates an enveloping rain effect that warms and caresses the feet and calves, offering various benefits such as stress reduction, muscle relaxation, improved circulation, and relief of muscle stiffness.

When combined with the Freezing Massage scenario, it produces an effective Kneipp effect, with the

timing controlled by the user. This contrasts with the Sport program, where the sequences are preset.

Versatility

The foot bath can be adapted for different purposes, *from specific foot treatments to more general relaxation sessions.*

Guest allure

The inclusion of services like the foot bath can serve as a draw for customers, *differentiating the SPA* and attracting people interested in a more comprehensive approach to wellness.

Integration into SPA beauty treatments

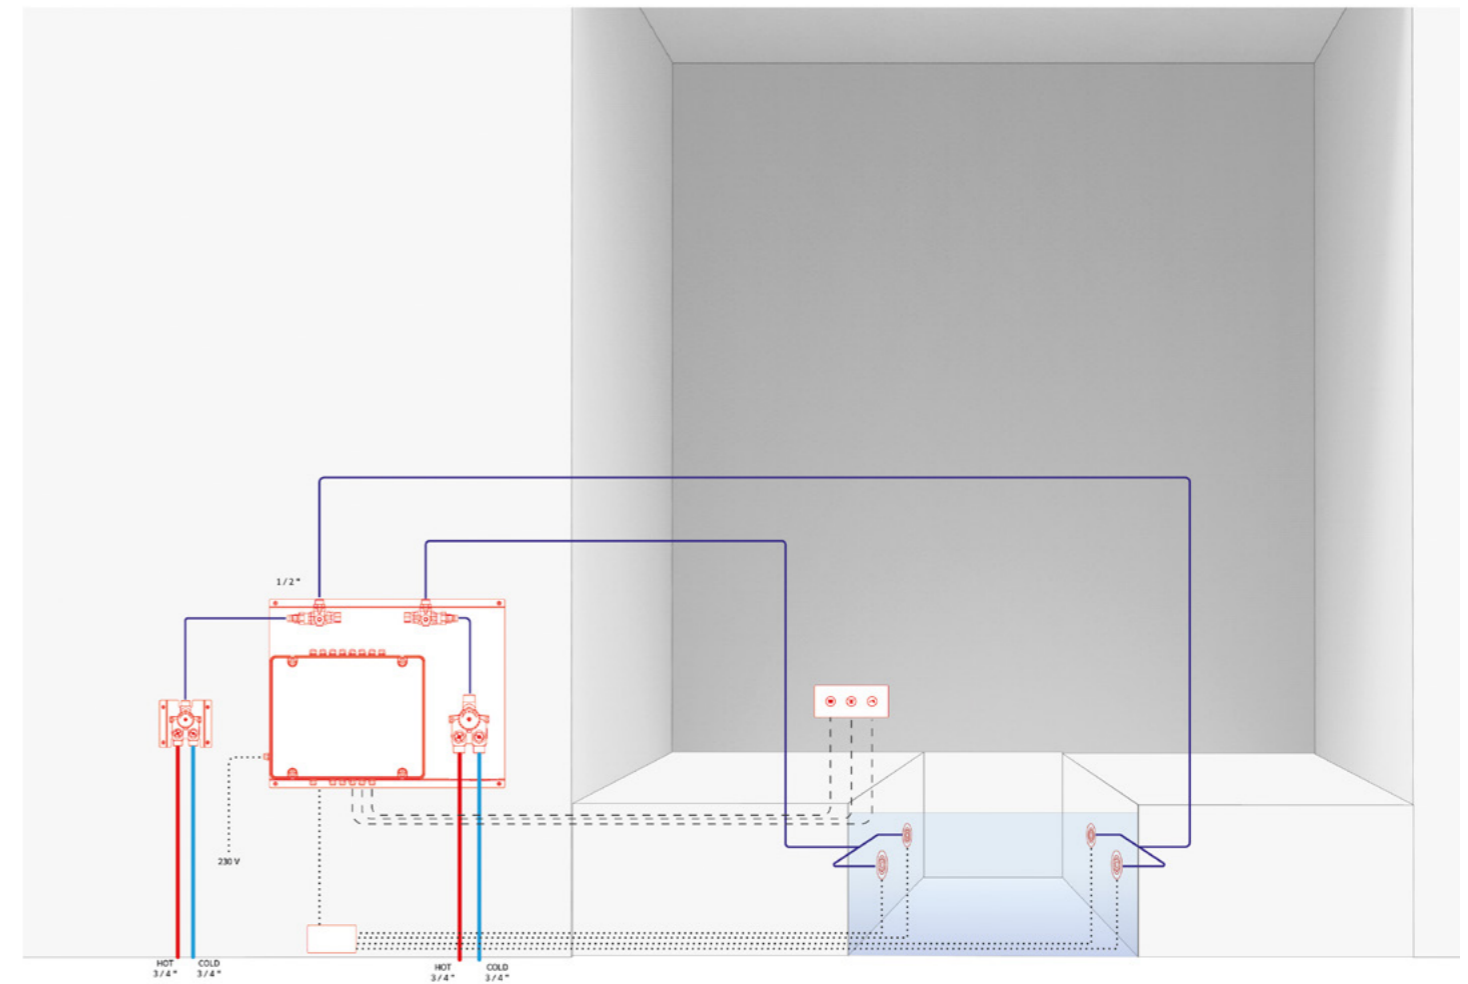

It can be easily integrated as a *preparatory phase for specific treatments* such as pedicures, foot massages, or other beauty treatments dedicated to the feet.

Preventive foot care

The foot bath can be promoted as a practice of *preventive foot care*, encouraging guests to take care of this often neglected part of the body.

FUTURA

Futura wall experience shower is an innovative shower experience designed to offer a personalized and enveloping moment of well-being. This advanced system combines various features to ensure a feeling of relaxation and toning for the body. The shower features a dense wall rain system, a waterfall integrated into the wall, and invigorating massaging jets. Users can activate these different functions separately or use the automatic program for balance treatment.

PROGRAM

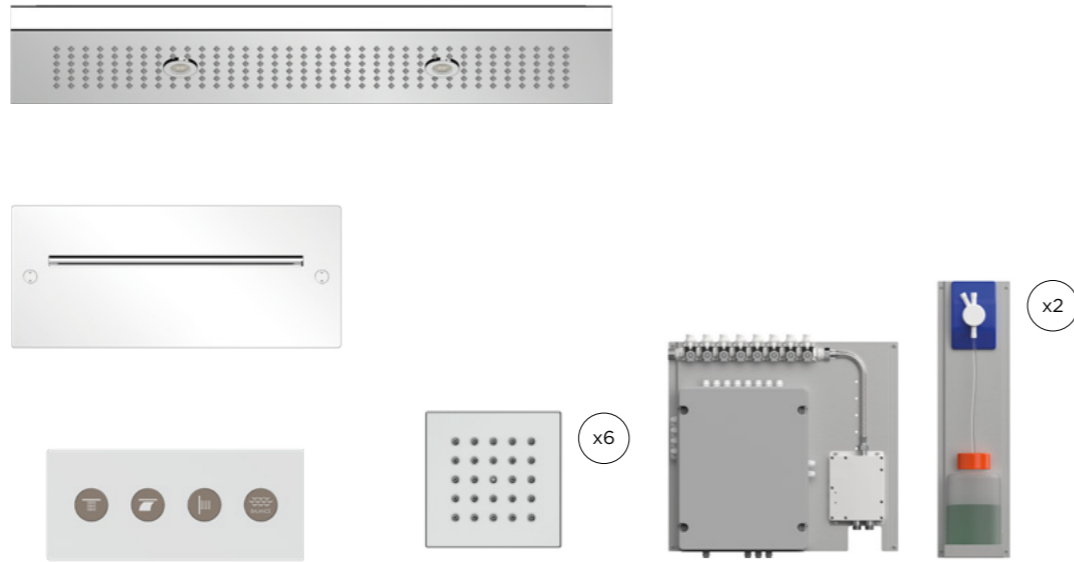

BALANCE

A pleasant massage on various areas of the body. The jets tone the body, focusing the massage on specific areas such as the lower back and shoulder blades. The water flowing with targeted pressure creates a rejuvenating sensation and helps alleviate any accumulated tensions in these specific areas. This scenario offers users a personalized treatment aimed at improving overall well-being through a toning and revitalizing massage on specific parts of the body. In the automatic massage sequence, the vertical shower offers a dynamic experience that alternates different functions,

providing a comprehensive and engaging treatment. By alternating the different functions in a sequential and continuous manner, guests are offered a comprehensive and varied treatment that involves different areas of the body simultaneously. This automatic massage sequence provides users with a complete and multisensory experience, combining different types of stimulation to promote relaxation and overall body well-being. The program also includes aromatherapy to positively influence guest emotional and physical state throughout the entire massage process.

Versatility

Wall experience shower can be offered as a **customizable option**, allowing guests to select modes and sequences that best meet their individual needs and preferences. In SPA Suites or Private Areas: It can be installed in SPA suites or private areas, offering guests the opportunity to enjoy an **advanced shower experience in a more exclusive environment**.

Style

In addition to functionality, the wall experience shower often features an **elegant and minimal design**. This not only fits into various SPA aesthetics but also contributes to creating an atmosphere of luxury and well-being.

Space usage

Thanks to the vertical arrangement of elements, the wall experience shower offers greater **versatility in space usage**. This makes it suitable for various configurations of SPA environments with very high ceilings, while still ensuring a complete shower experience.

VELUM

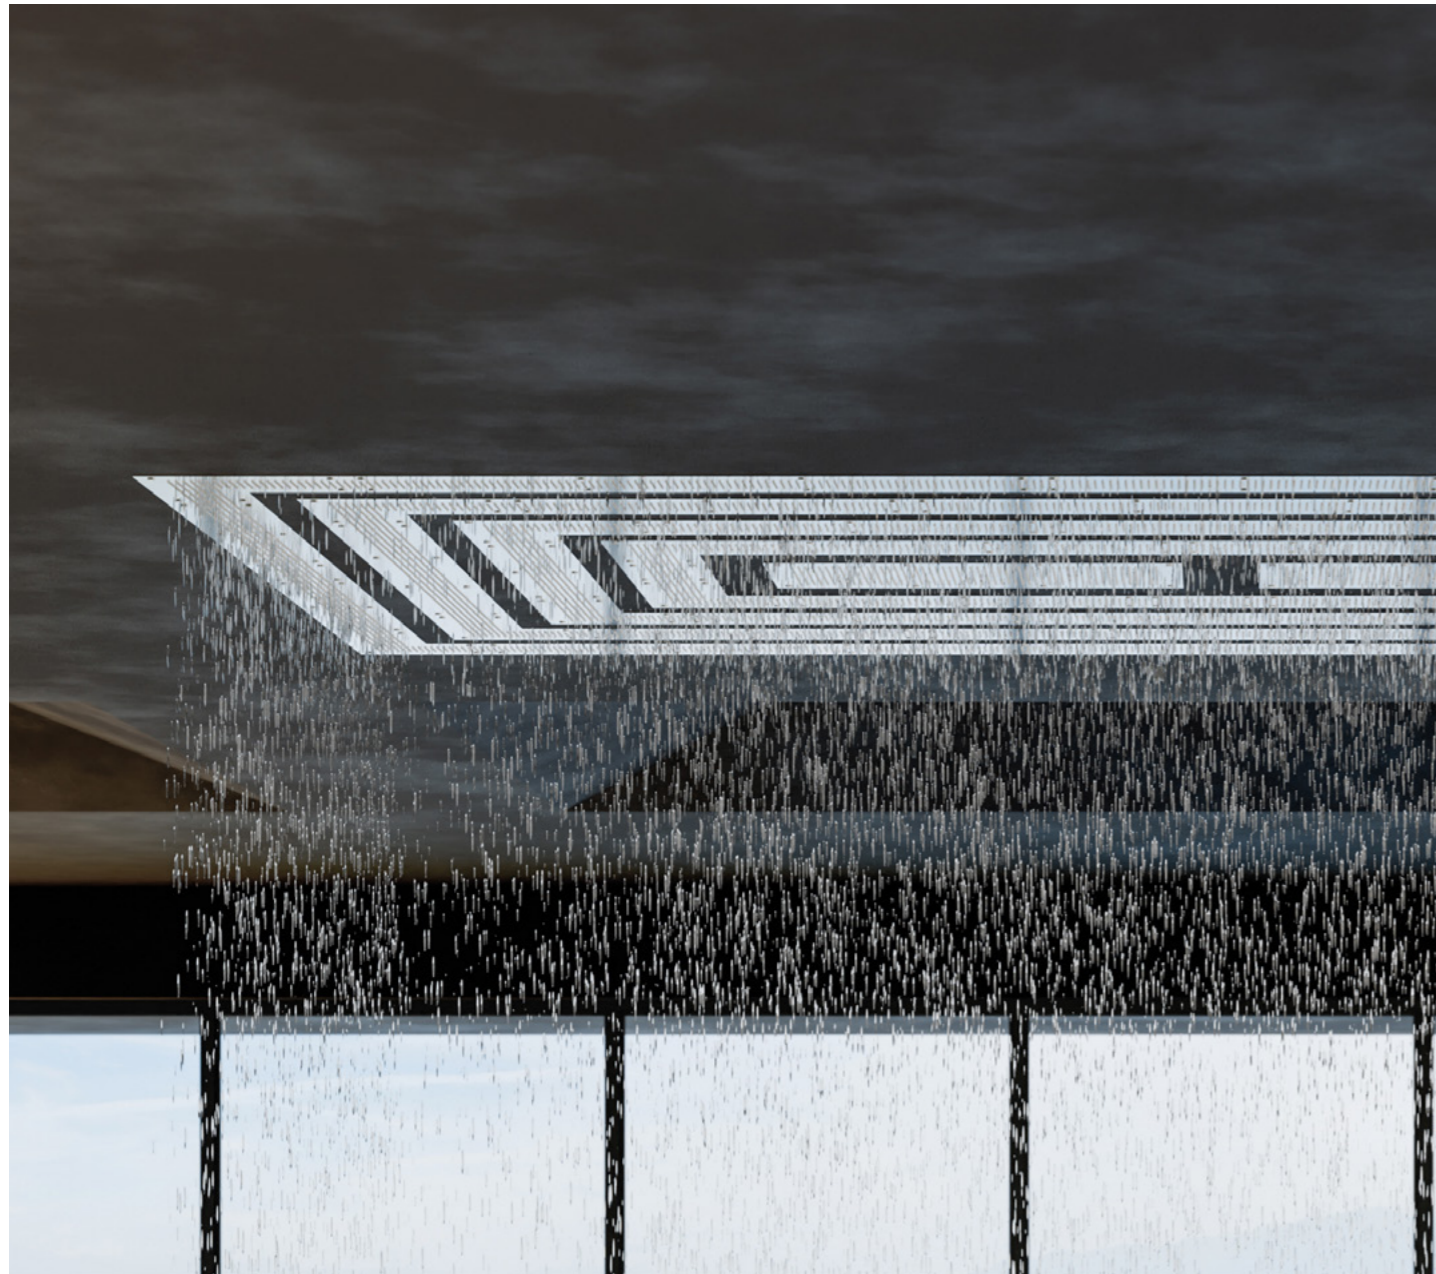

Sky rain and water curtain over the pool can be designed to create a multisensory effect within the water, allowing for the realization of customized shows. These curtains can be equipped with colored lights, misting systems, and other elements that enable the creation of light displays, sounds, and tactile sensations. The combined effect of these features can transform the water experience into an engaging and immersive one, suitable for both relaxation and entertainment. Additionally, the integrated light can be used to recreate natural sensations, such as sunlight, water reflections, or the simulation of a thunderstorm, further enhancing the shower above the pool to be even more engaging and realistic.

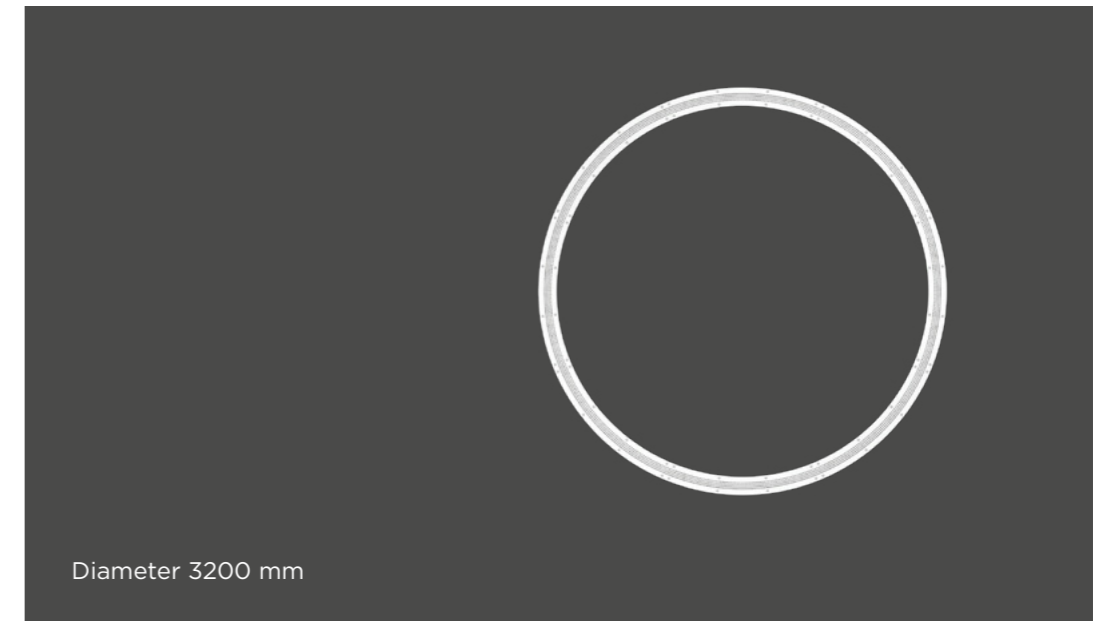

Thanks to the technology developed, the Sky Rains can be customised in terms of shape, size and function, making them ideal to meet each customer's specific needs. High quality standards ensure durability and excellent performance, while modular water distribution systems offer design flexibility, allowing to create a unique, tailor-made velum for each pool or SPA room.

This level of customisation allows the environment to be perfectly adapted to individual preferences. The possibility of choosing between different finishes and designs allows the Sky Rains to be perfectly integrated into any architectural context.

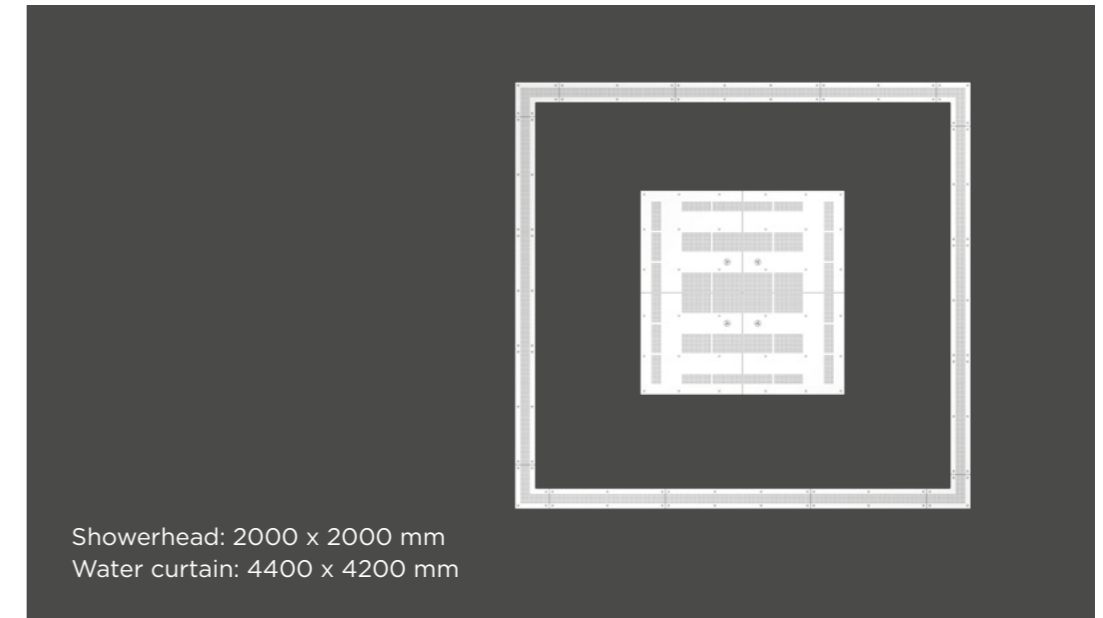

The Sky Rains represent the perfect fusion of technological innovation and elegant design, offering a versatile and sophisticated solution for pools and spas, capable of transforming any space into a unique sensory experience.

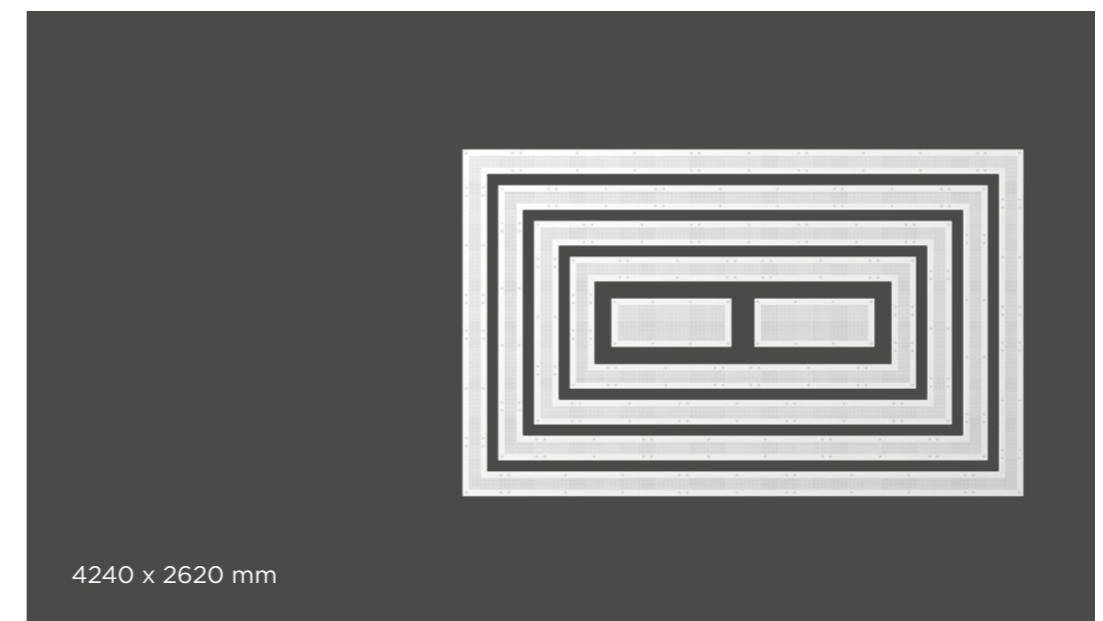

Round water curtain over the pool

Water Curtain with integrated shower over the pool

Sky rain over the Pool

Innovation and entertainment:

The program represents an *innovative* addition to traditional entertainment and relaxation options, offering users a unique and *memorable experience*.

Replicating natural environments

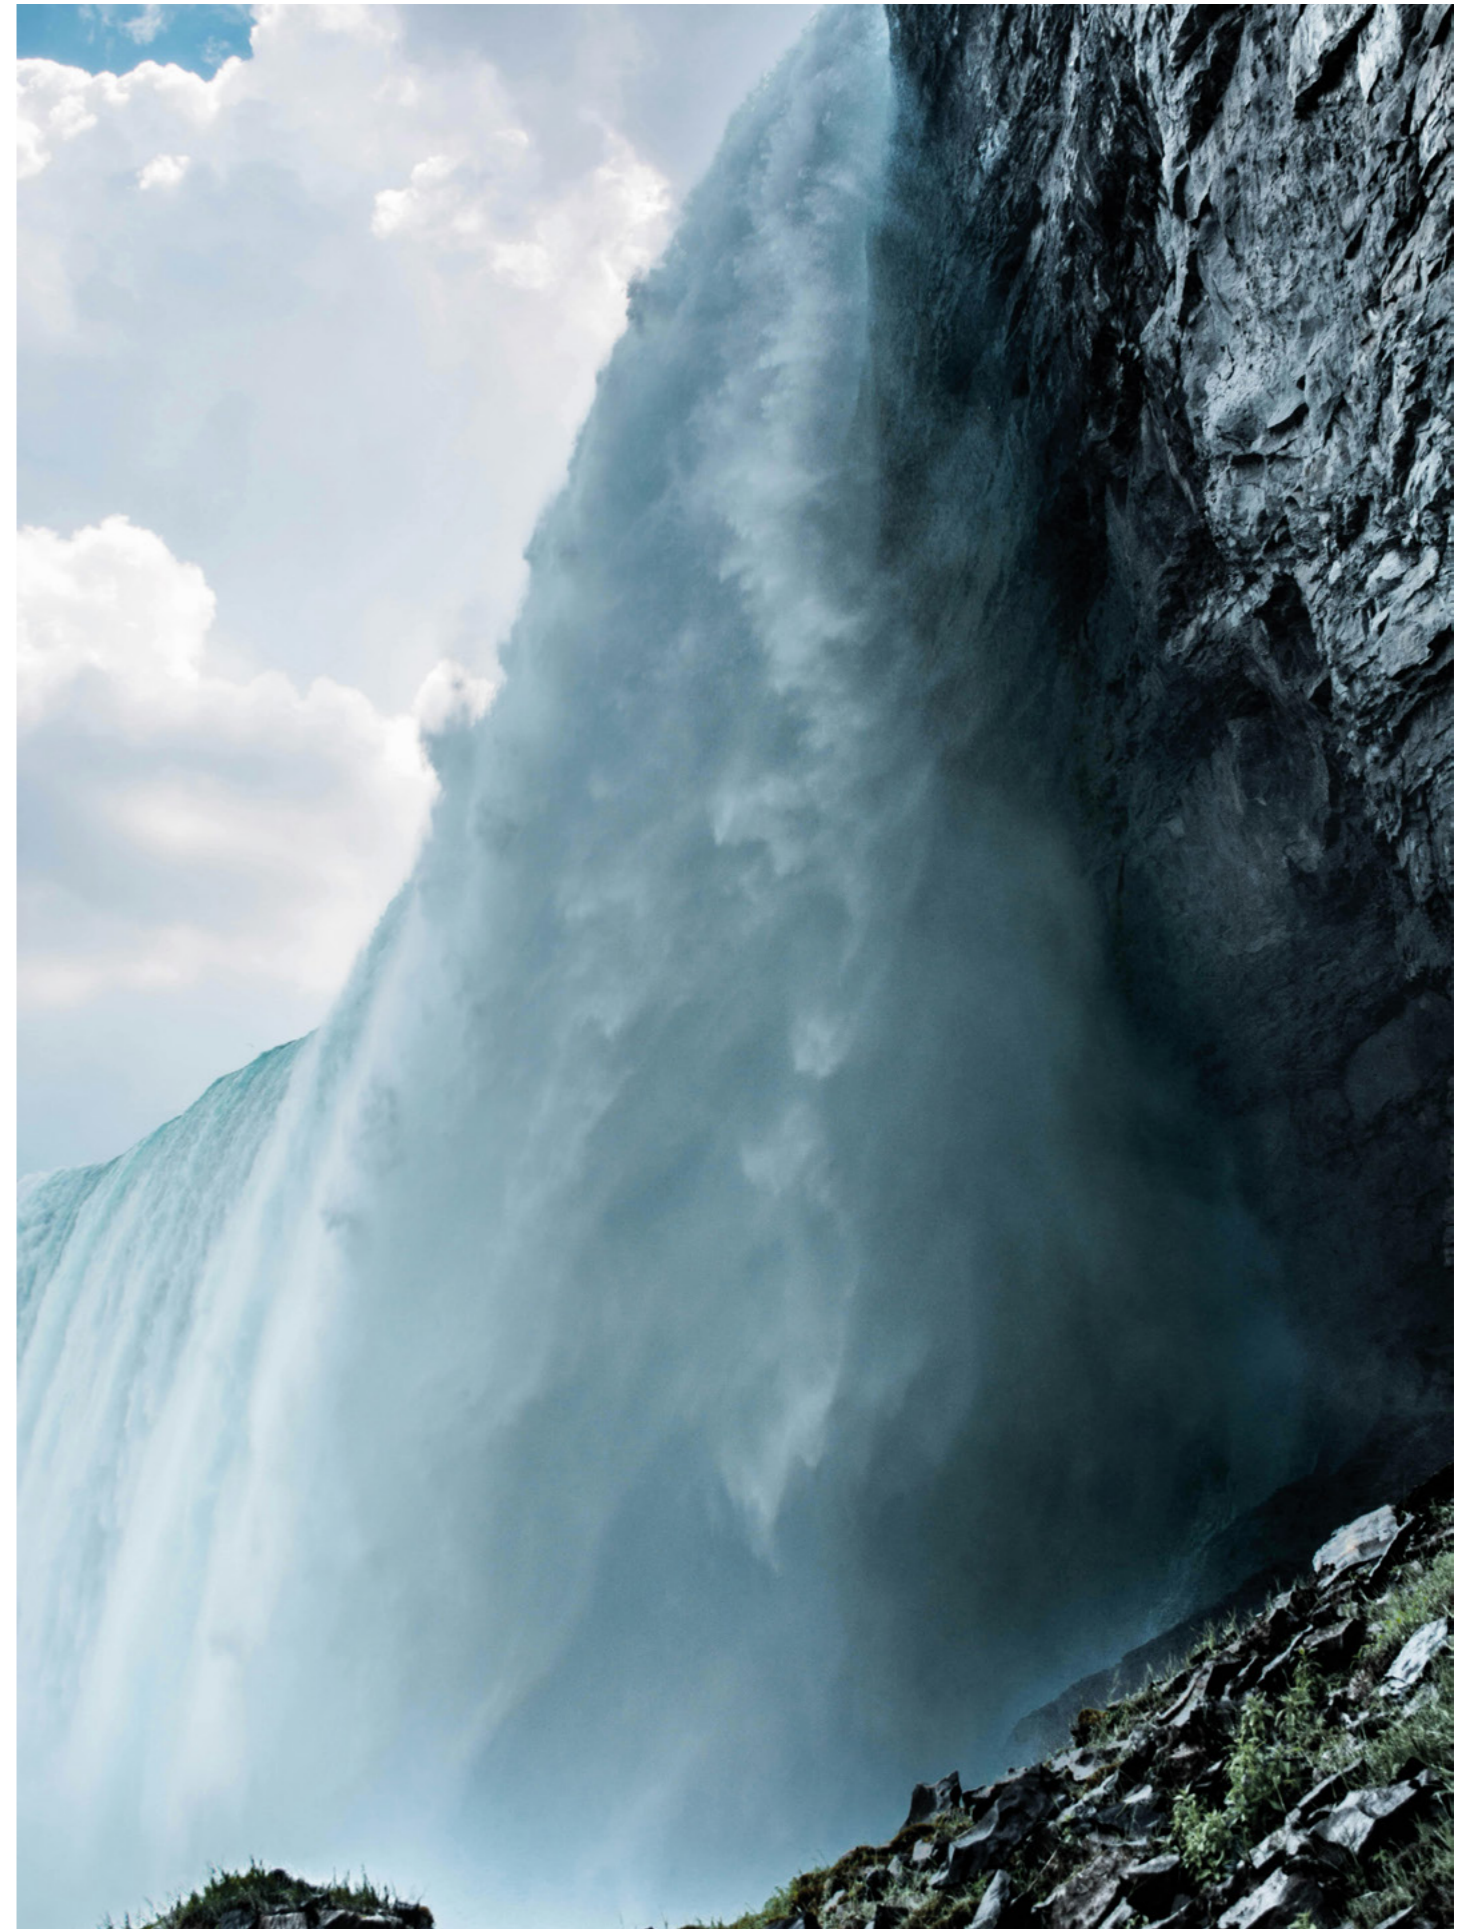

Simulating characteristic *natural events* of the seasons, such as summer rain or autumn colors, allows users to enjoy an experience that faithfully recreates the natural environment, even in an indoor setting.

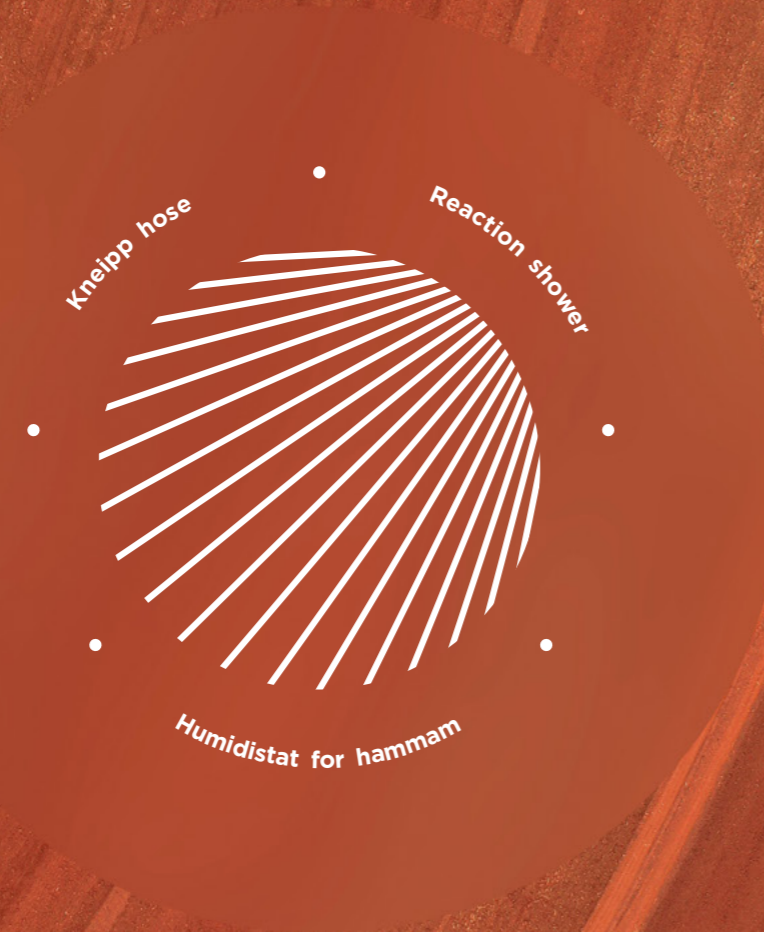

Engaging experience:

It provides users with an engaging multisensory experience that simulates the natural cycle of the four seasons, allowing them to fully immerse themselves in a *realistic and evocative atmosphere*.

Video integration:

Video projections can be used to add a dynamic and engaging *visual element to the experience*, allowing for even more vivid and realistic scenarios of the different seasons.

HOT AREA

The "hot zone" in a SPA refers to an area designed to provide a thermal experience involving higher temperatures. This area is typically characterized by structures and services that generate

heat to promote relaxation and stimulate various health benefits.

REACTIO

REGENERA
› **Kneipp hose**

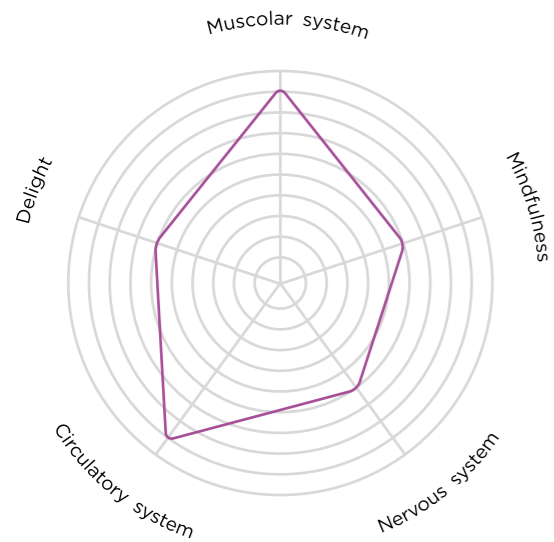

MODERA
› **Humidistat for hammam**

REACTIO

Beneficial in a SPA or thermal circuit, it offers guests a gradual and comfortable method to reduce body temperature after hot thermal sessions, promoting relaxation and overall well-being. Its primary function is to provide a gentle and refreshing jet to soothe the body after exposure to high temperatures.

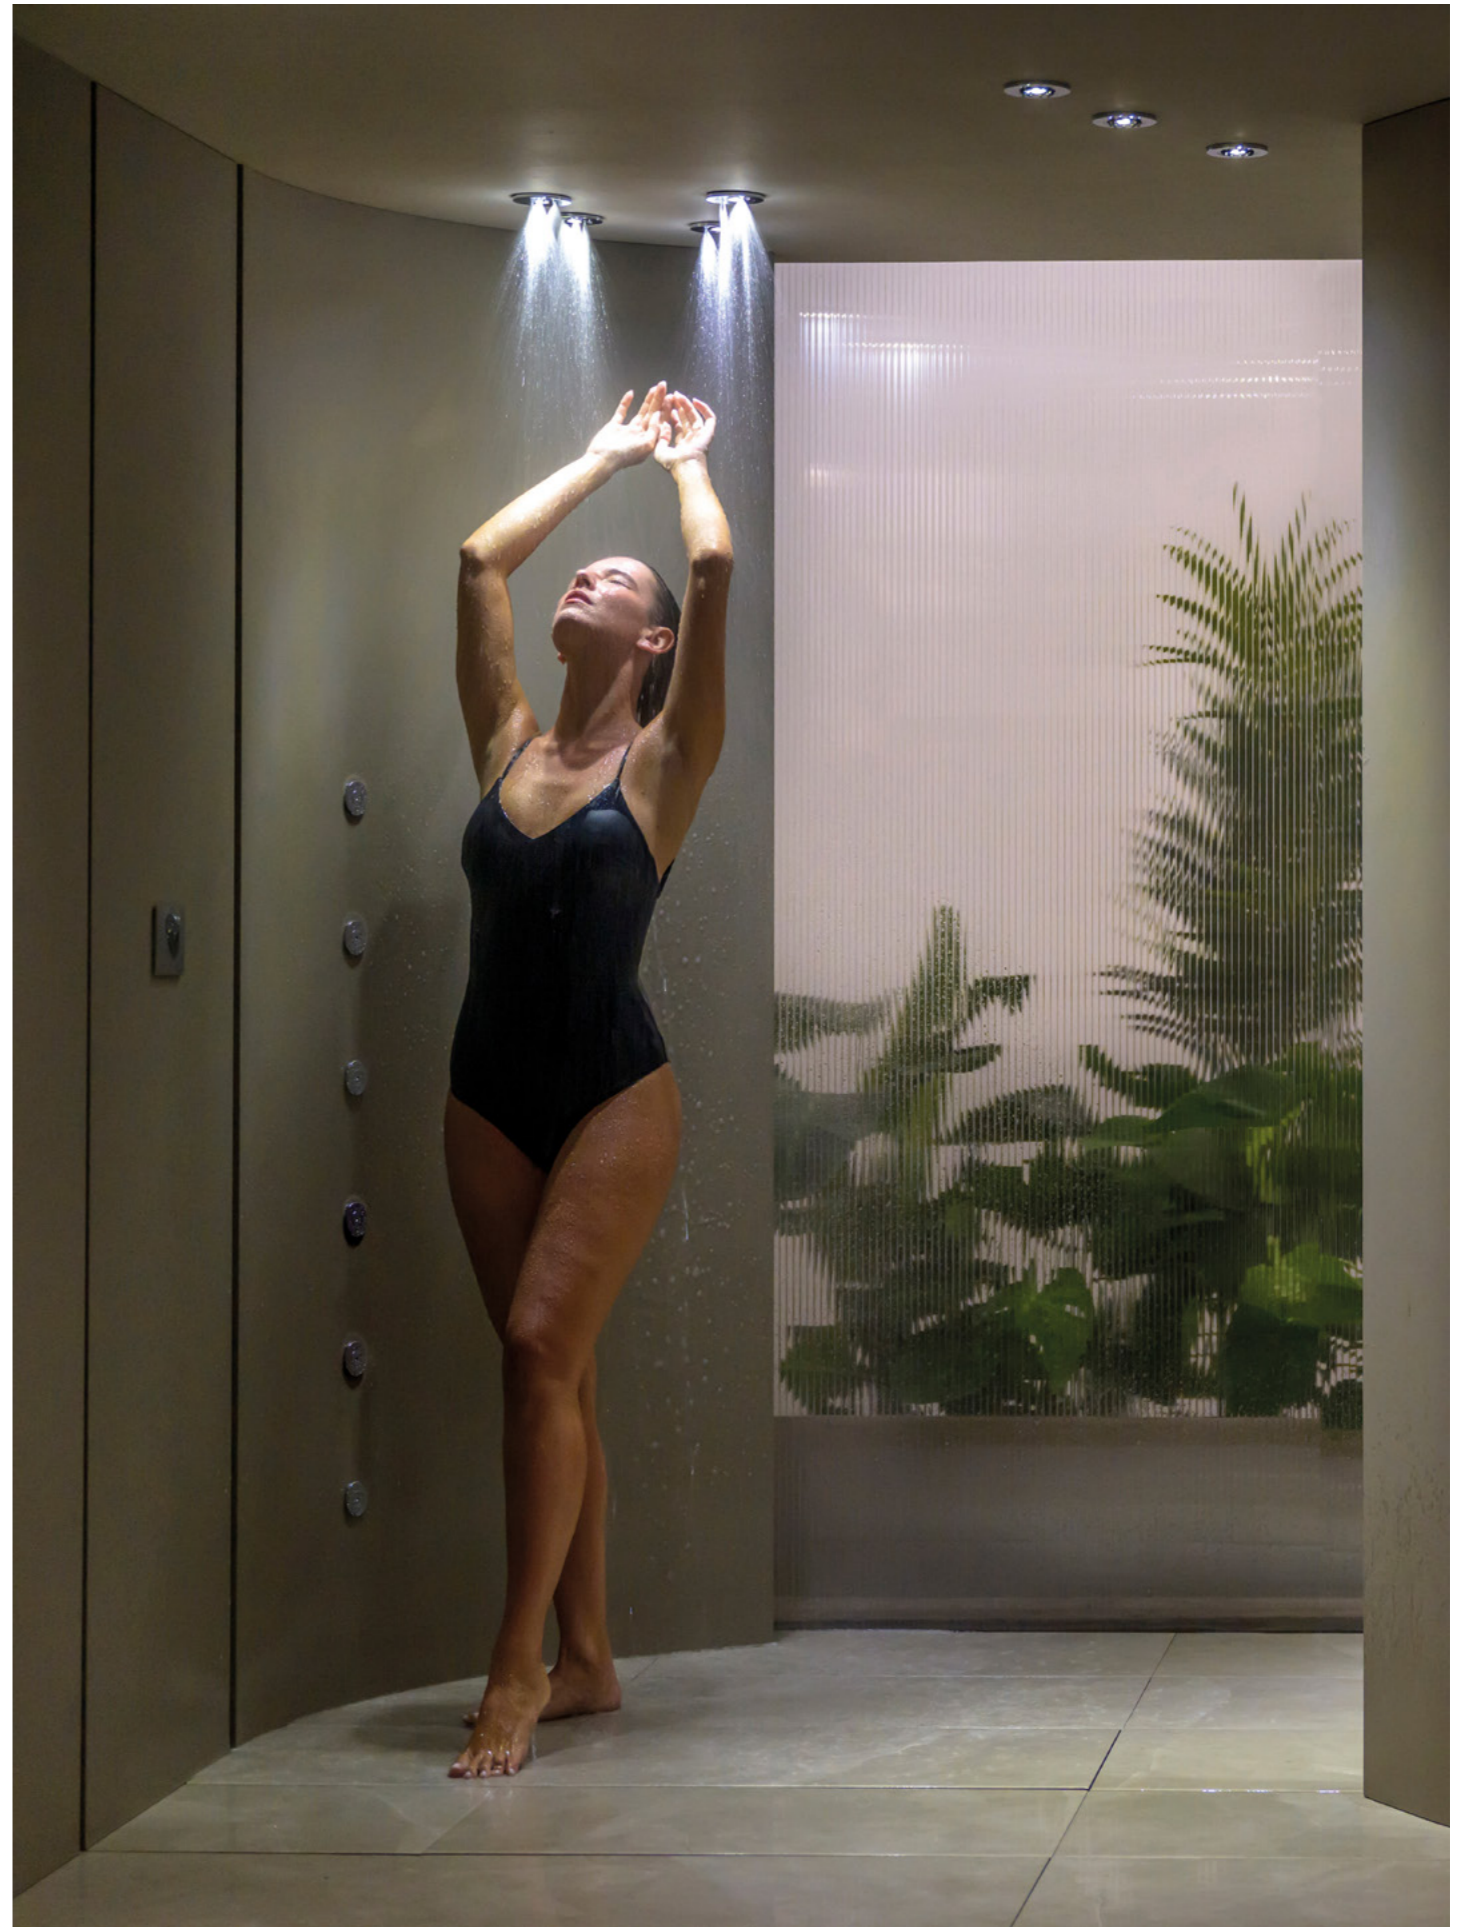

DIAGRAMS

REACTIO VALUES

Flexibility

The system allows for **easy temperature adjustment**, enabling SPA staff to set temperatures according to the desired contrast effect. These adjustments can be made conveniently via the digital panel located inside the control unit.

Style

The showerheads feature an elegant recessed design with stainless steel or metal finishes, adding an air of **sophistication and luxury**, this meticulous attention to aesthetic detail enhances the **overall atmosphere of the space**.

Experience

The integration of cold mist, synchronised lighting and aromatherapy creates an immersive, multi-sensory experience. This innovative approach transcends the traditional contrast shower, engaging all the senses to provide a **holistic cooling experience** that refreshes both body and mind.

Water-saving

Using a fine mist instead of traditional water jets, the **system saves considerable water** without sacrificing quality or effectiveness.

REGENERA

The kneipp hose is a special shower designed to follow the principles of "Kneipp hydrotherapy." It allows for the administration of high-pressure cold water jets. The Kneipp shower can be used for specific treatments, such as jet hydrotherapy, circulation stimulation, or cooling cycles within steam baths.

DIAGRAMS

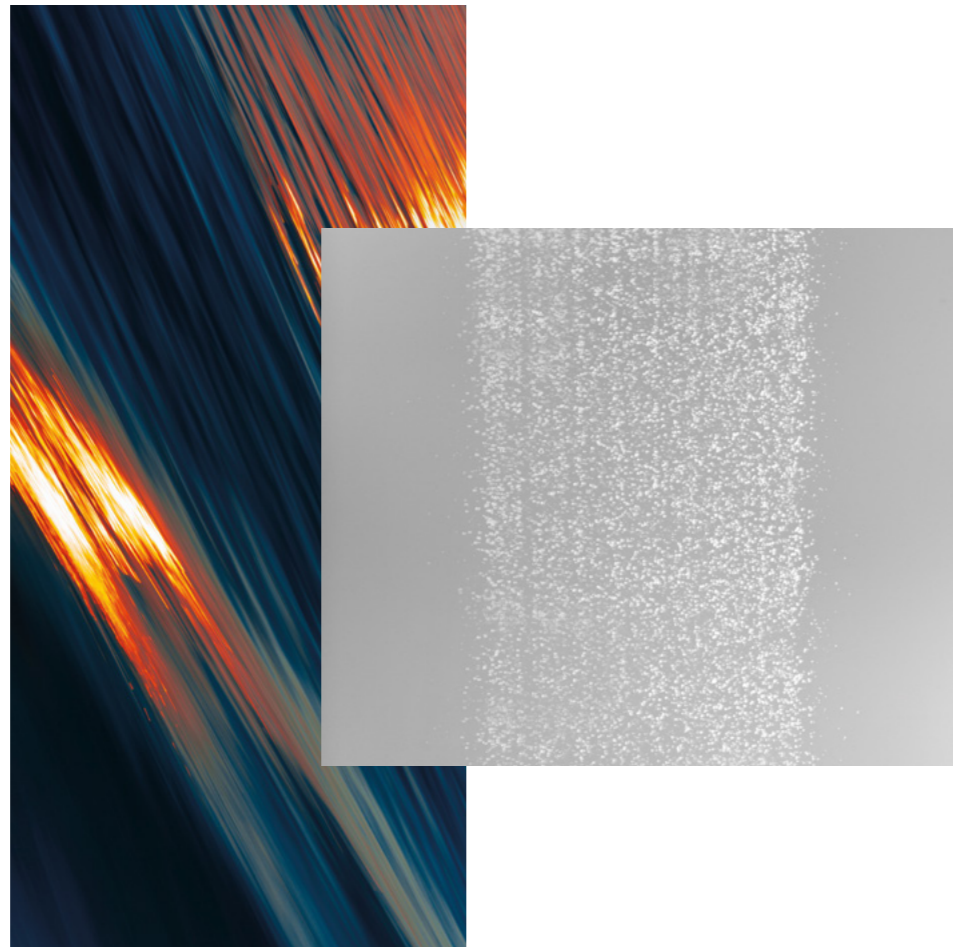

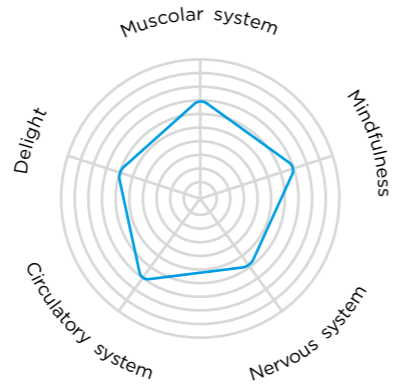

SCENARIO

- Kneipp hose rain 
- Kneipp hose aerated 
- Kneipp hose tropical 

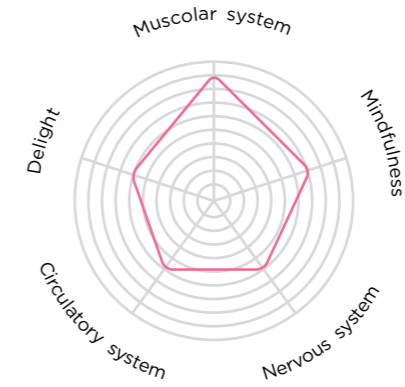

KNEIPP HOSE RAIN

The Kneipp hose with rain jet is recommended for light hydrotherapy treatments. The gentle and relaxing rain jet can be used during steam bath sessions to stimulate circulation, provide a cooling sensation, and promote muscle relaxation. It can also be used for cleaning benches during or after steam bath sessions.

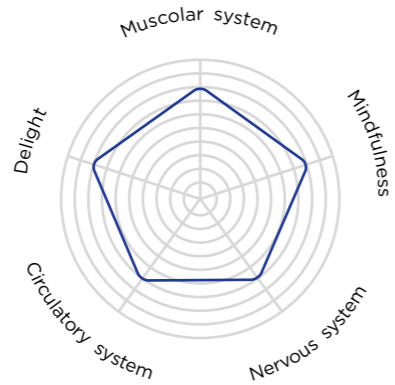

KNEIPP HOSE AERATED

The aerated Kneipp hose represents an optimal mix of water and air, ideal for massaging specific areas of the legs and relieving tension or fatigue. The combination of water and air provides an effective treatment to promote muscle relaxation and improve leg well-bein.

KNEIPP HOSE TROPICAL

The Kneipp hose Tropical offers a relaxing yet stimulating jet, almost like an invigorating tonic that provides vitality. The gentleness of the jet contributes to a wellness experience that can be refreshing and revitalizing.

Cooling sensation

The rain jet or gentle jet effect contributes to a pleasant **cooling sensation on the skin.**

Versatility

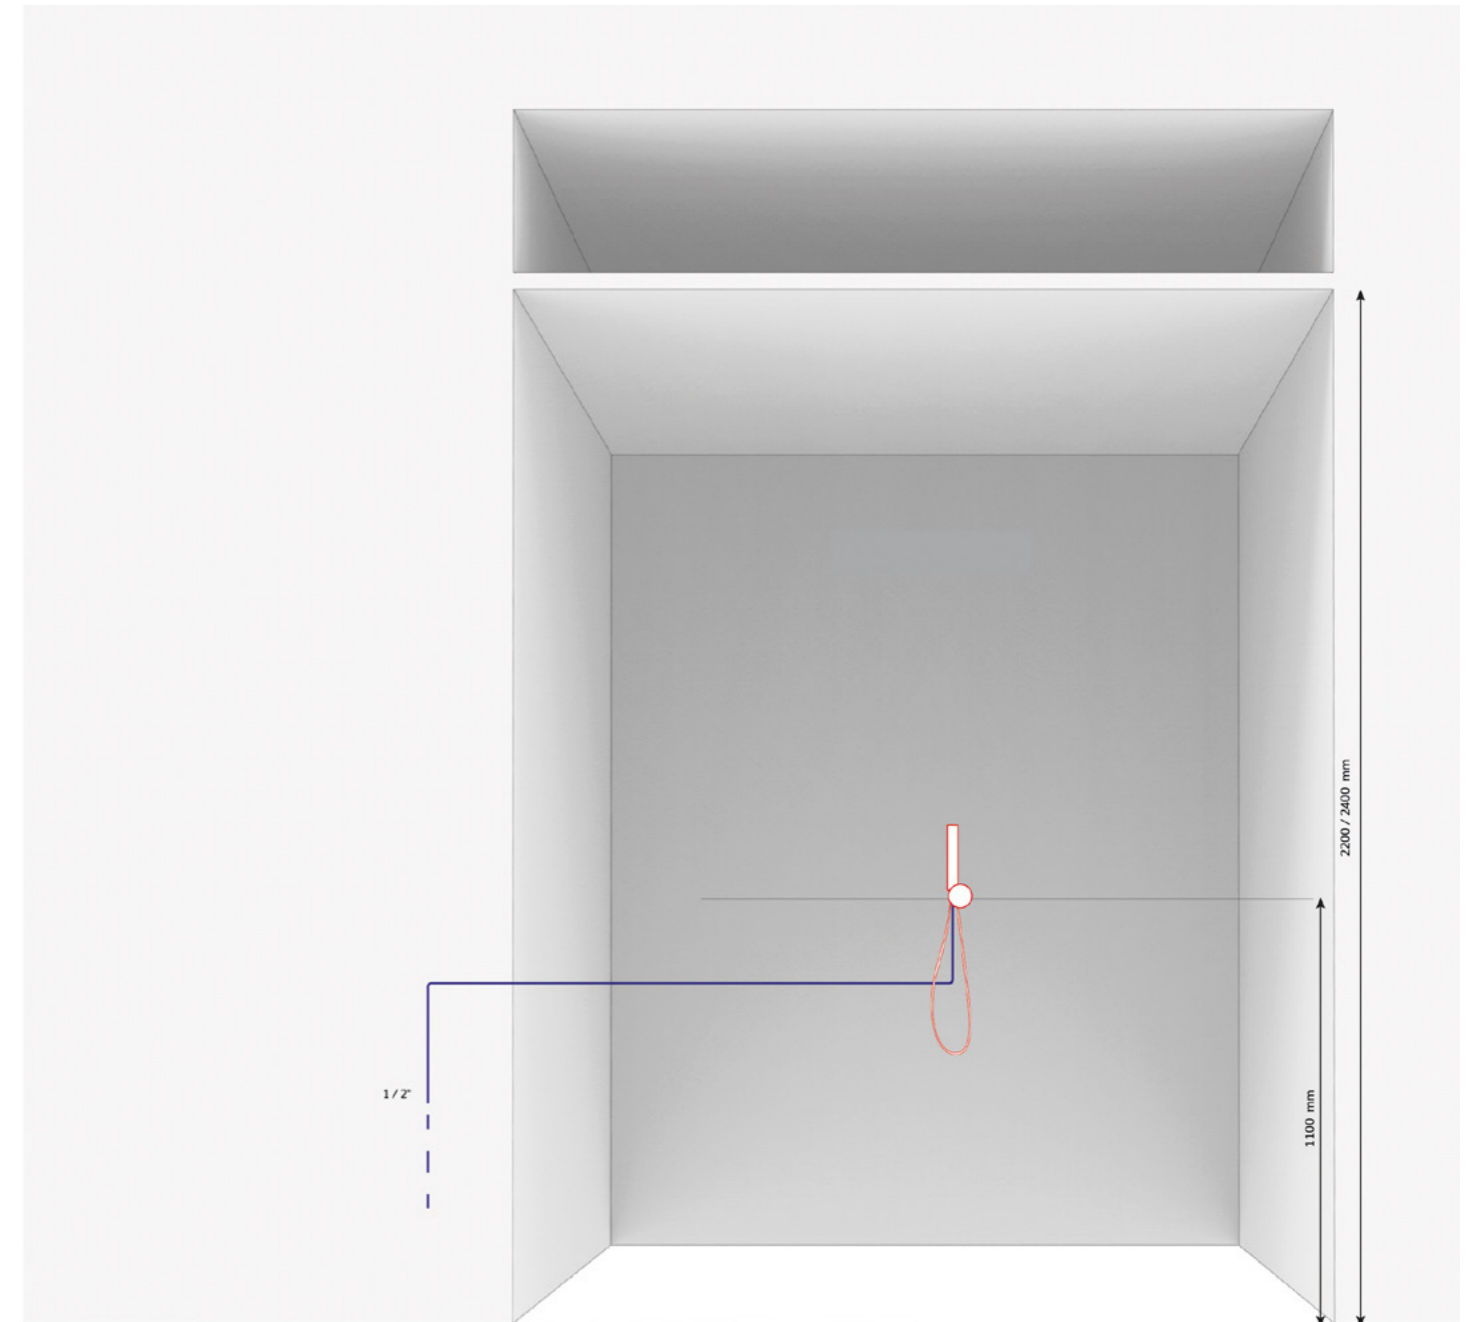

They can be used in various applications, such as **steam baths**, to massage specific body areas, and to enhance the thermal experience.

Energetic stimulation

In particular, the Kneipp hose gentle rain, with its stimulating jet, can provide a **sense of vitality and energy.**

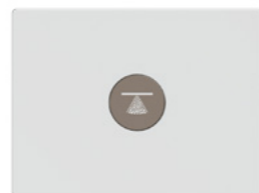

Surface cleaning

Kneipp hoses can be used to rinse and clean surfaces inside the hammam. The delicate water jet allows for the **removal of any residues or impurities** without damaging sensitive surfaces.

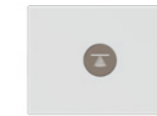

MODERA

Modera introduces an innovative system for regulating humidity and steam inside the hammam by distributing nebulized water through strategically placed nozzles above the marble table or benches . These sprays can operate in either automatic or manual mode. In automatic mode, a specially designed probe measures the humidity. If the humidity level falls below the preset threshold, the system activates the sprays to increase humidity. In manual mode, activated via a switch, the nozzles can be operated manually and used for rinsing after a scrub, savonage, or other treatments. The nozzles are connected to an aroma system that infuses the water with aromatic essences, enhancing the overall experience.

Integrated humidity regulation

Modera comprises a sophisticated probe seamlessly integrated into the air ventilation system of the hammam. This probe continuously monitors and **adjusts the humidity levels**, ensuring they remain at the optimal range in order to deliver an **optimal experience**

Precision water delivery

Strategically placed nozzles positioned above the treatment table deliver **water precisely where it's needed**, enhancing various treatments such as savonage and massages.

Versatile control options

Modera electronic control unit, managing the Hammam System is effortless. The system **can be activated manually** for personalized control, allowing users to enjoy the benefits of a Vichy shower experience over the treatment table. By toggling the switch on the control unit, the system seamlessly transitions into **automatic mode**, allowing it to efficiently regulate and adjust the humidity levels within the hammam.

COLD

COLD AREA

The "cold zone" within a SPA represents an area specifically designed to offer guests cooler and more refreshing thermal experiences compared to other parts of the facility. This space is conceived to

counterbalance hotter areas such as saunas or steam rooms, creating a thermal equilibrium in the overall SPA experience. The presence of a "cold zone" can bring significant physical, mental, and biohacking benefits.

Thermal contrast

The cold shower provides refreshing thermal contrast after hot thermal treatments, stimulating circulation and **promoting muscle relaxation**

Renewal

The cold effect of the Cold shower stimulates the skin, improving the sensation of tone and **promoting healthier skin**.

Revitalizing effect

Using the cold shower can have a revitalizing effect, helping to reduce fatigue and **improve energy levels**.

Energy efficiency

After intense physical activity, the Cold shower can contribute to **muscle recovery**, reducing inflammation and alleviating any tension.

Post-physical activity recovery

The cold shower, designed with modern technologies, can be energy-efficient, contributing to sustainable SPA management. Achieving a sensation of cold with **low energy consumption** compared to producing ice.

DRIZZLING

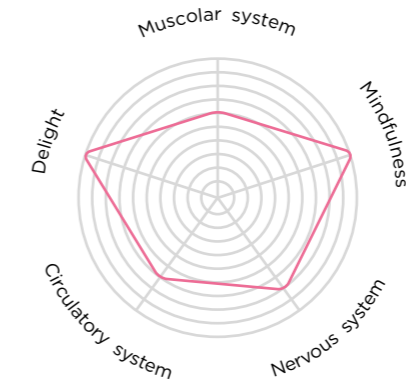

The Drizzling scenario is designed to create an atmosphere of pleasant natural drizzling. In this scenario, multiple water effects are activated simultaneously, simulating the falling of tiny refreshing water droplets. This effect aims to provide a sensory experience reminiscent of a pleasant rainy day, contributing to the relaxation and well-being of guests.

ENERGY

The energy program features dynamism of jets, designed to awaken and energize the individual. This program, aimed at providing a boost of vitality, stands out for the alternation of contrasting temperatures, creating variations of warmth and cold that tone not only the muscles but also the skin. Ideal as a morning wake-up or as a final after a day in the SPA, the "Energy" program aims to reactivate the brain and stimulate the senses.

Chromotherapy is an integral part of this experience, with the skillful use of warm and cool colors that alternate, contributing to creating a dynamic and stimulating visual effect. Dynamic and tribal sounds, merge into a sensory rain dance, offering a stimulating and engaging auditory experience. Citrus aromas, such as lemon and oranges, add a fresh and lively touch, intensifying the sensation of energy and vitality.

PLUVIA VALUES

Natural experience

The rain room offers an experience akin to being under a drizzling or waterfall, providing a **connection with nature and a rejuvenating atmosphere.**

Thermal contrast

It can be used as part of a thermal circuit, providing a **contrast with warmer areas** such as saunas or steam rooms.

Multisensory experience

The combination of rain sounds, the scents of natural environments, and the sensation of water on the skin offer a **unique multisensory experience.**

Sensory relaxation

Light rain creates a **relaxing sensory experience**, contributing to stress reduction and promoting relaxation. The sensation of rain can have a calming effect on mood, helping to improve **emotional well-being** and reduce anxiety.

GLASIS

Glasis shower system offers a soothing and refreshing experience, ideal for cooling down spa-goers after hot thermal sessions. Strategically placed wall-mounted nozzles provide gentle rain-like jets of cold water, gradually reducing body temperature for enhanced relaxation and well-being.

The system ensures a smooth transition from hot to cool, delivering gentle jets that refresh and soothe the body. Integrated aromatherapy infuses the water with soothing scents, creating a multi-sensory cooling experience. In summary, the Glasis shower system is a state-of-the-art solution for cooling down after hot sessions, promoting relaxation and well-being with its gentle rain jets, customizable settings, and aromatherapy.

DIAGRAMS

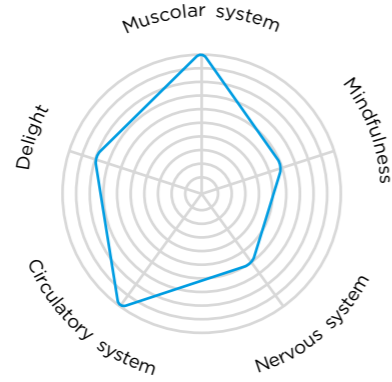

PROGRAMS

- Sport 

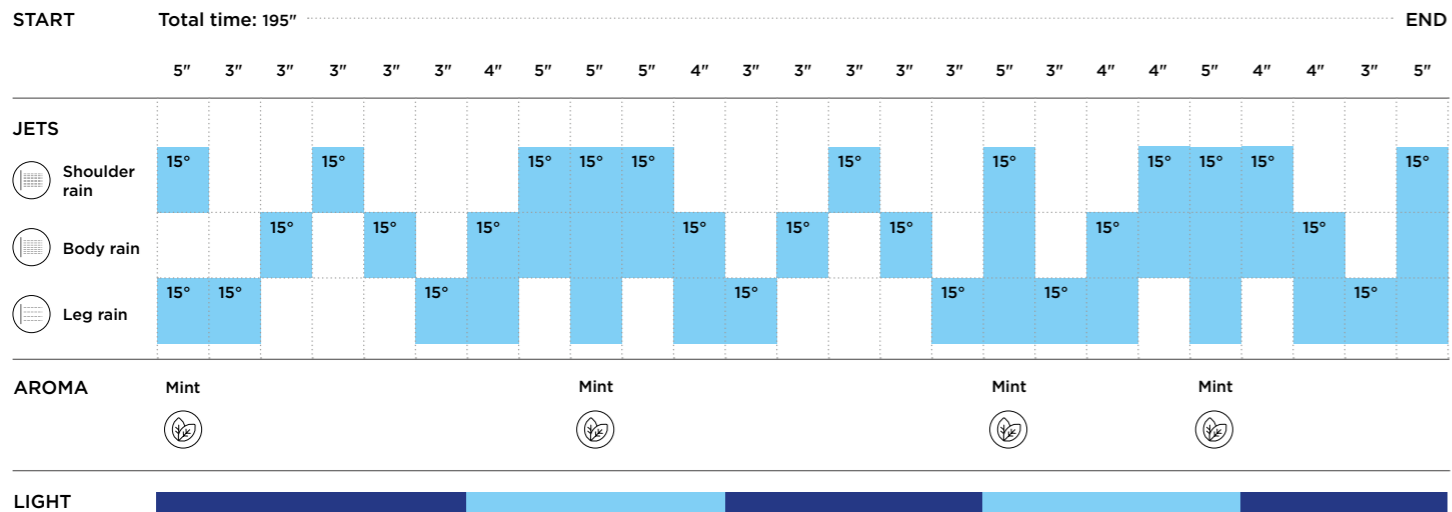

SPORT

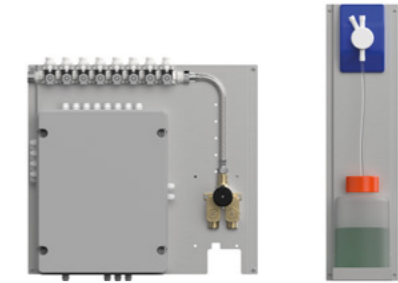

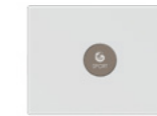

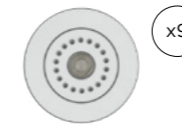

The Glasis Sport program delivers an effective cooling experience by alternating various jets to optimize their impact on both temperature reduction and massage. The program first activates the initial line of jets, followed by the second, and finally the third. After this sequence, all jets are activated simultaneously before returning to the alternating phase. This alternating operation is designed to maximize the effectiveness of each line of jets, thereby enhancing the massaging and toning effects.

AQUAMOTUS

Aquamotus is a revolutionary horizontal shower that redefines the concept of wellness with its proven therapeutic benefits. Leveraging cutting-edge technology, it faithfully replicates the sensations and effects traditionally achieved only through manual massage, drawing on the expertise of time-honored massage techniques. By harnessing the therapeutic power of water, AQUAMOTUS delivers a complete and innovative treatment that promotes peak levels of psychophysical regeneration, ensuring top-tier performance. With up to 16 preset programs ranging from 10 to 40 minutes, AQUAMOTUS offers a diverse range of massages from energizing and relaxing to harmonizing, designed to meet every therapeutic need. Each session combines precise jets, colors, and movements to guide both body and soul to the highest state of wellness, offering an unparalleled sensory experience.

ZENIT

Zenit is a wall-mounted horizontal shower designed to seamlessly integrate with other body care treatments such as scrubbing and Savonage. It features two types of jets: rain and mist, both enhanced by integrated chromotherapy. The rain jet simulates the soothing sensation of a gentle, relaxing rainfall, while the mist jet envelops the body in a delicate, light water cloud. Both jet types are complemented by chromotherapy, utilizing colored lights to stimulate the senses and foster relaxation and well-being.

Users can easily control Zenit with a touchscreen system that offers four preset automatic programs or allows for manual customization, tailoring the experience to individual preferences and needs. Combining versatility with advanced features, Zenit provides a complete and customizable horizontal shower experience, perfect for those seeking relaxation and rejuvenation for both body and mind.

HORIZONTAL SHOWER

HORIZONTAL SHOWERS VALUES

	Aquamotus	Af-Fusion	Zenit	Nadir
				
Features	Aquamotus offers a premium SPA experience with its advanced horizontal shower system. Featuring five different water jets meticulously calibrated for optimal massage, it provides comprehensive body coverage and maximizes therapeutic benefits. The unique placement of the jets is designed to match the contours of the human body , ensuring that every single body part is effectively covered . The incorporation of chromotherapy further enhances the experience by positively influencing the user's mood. The system also includes 35 solenoid valves, 16 programs, and 50 combinations, standing out for its versatility and sophistication . Additionally, Aquamotus is equipped with a 4.3" touch screen and manual use option.	Af-Fusion is designed for those who want a professional-grade massage in a more compact form . It provides an effective and immersive massage experience with a thoughtful placement of its four different types of jets , ensuring good coverage of the body. The use of chromotherapy also enhances the overall treatment experience. Af-Fusion includes four types of jets, four programs, ten combinations, and a 4.3" touch screen, along with manual use options.	Zenit bridges the gap between standard Vichy showers and premium systems. Its sleek, wall-mounted design makes it suitable for both professional spas and private residences . Zenit features a built-in touch panel, a versatile hand shower , and various wellness programs with chromotherapy. It offers two types of jets, four programs, ten combinations, and a 4.3" built-in touch screen , all available in two finishes. (polished and brushed steel)	Nadir combines traditional Vichy shower functionality with advanced SPA features. It offers multiple wellness programs through its jets and chromotherapy, all within a compact and easily integrable design . Nadir includes two types of jets, four programs, ten combinations, and a 4.3" touch screen, along with manual use options.
Type of Installation	Aquamotus is available in two finishes (Corian structure available in white and black), with four heights and four types of fixing for ceiling installation.	Af-Fusion requires a flush ceiling installation , suitable for materials like gypsum board, and is available in two finishes. (polished and brushed steel)	Zenit is designed for wall application , making it adaptable to different architectural constraints and aesthetic preferences.	Nadir requires a flush ceiling installation and is available in brushed finish.
Best for	Choose Aquamotus for top-of-the-line SPA treatments that require versatility , style, and the highest level of functionality. Ideal for those seeking a luxurious, immersive experience and for businesses aiming to offer premium services , Aquamotus represents the pinnacle of quality and performance .	Choose Af-Fusion when space or installation constraints are a consideration. It is ideal for those who desire a high-quality horizontal shower experience with a focus on efficiency and space management . Positioned as a slightly more accessible option, Af-Fusion offers excellent performance and value .	Choose Zenit for a superior hydrotherapy experience when architectural constraints or aesthetic preferences require a wall-mounted design. It is perfect for enhancing SPA offerings or for luxurious home treatments . Zenit is an attractive option for those looking for advanced functionality at a more accessible price point.	Choose Nadir when space efficiency and seamless design integration are paramount. It is ideal for environments requiring full access to the massage table or where sophisticated functionality is desired without compromising on elegance. Nadir represents a highly attractive option for those seeking a balance of advanced features and affordability .
Budget	●●●●	●●●	●●	●●

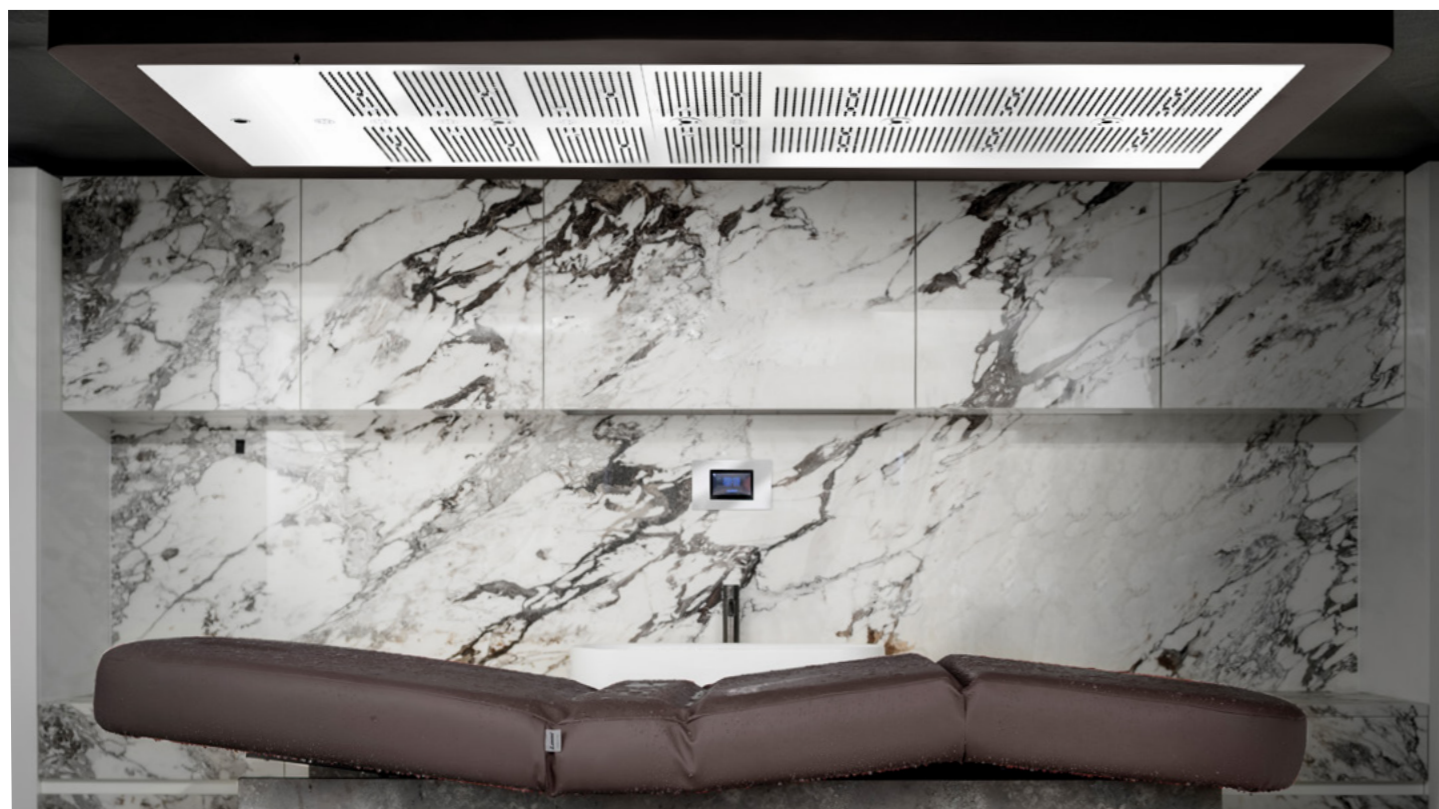

AUTOMATIC MODE

Thanks to a decade-long collaboration with BBSPA & Partners and their deep knowledge of various massage techniques, aquaform Vichy showers now feature up to 16 preset programs. These programs range from 10 to 40 minutes in length, offering a variety of massages from energizing and relaxing to balancing. Each program combines specific jets, colors, and movements to address different therapeutic needs, elevating both body and soul to the highest level of wellness.

MANUAL MODE

The Horizontal Shower system features versatile program modes, including a manual control option that allows users to tailor their experience precisely to their needs. Its advanced materials and technologies ensure seamless operation and reliable performance.

Capable of utilizing various water types—fresh, saltwater, or thermal—with no risk to the hydraulic system or massage technologies, this innovative shower system offers unmatched flexibility and efficiency.

Jets

Temperature

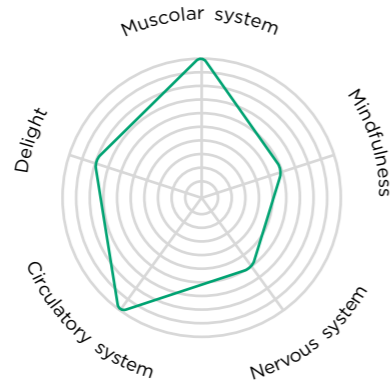

Colours

Time

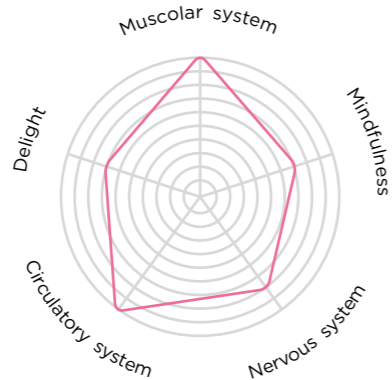

SPORT

The sport programmes are designed to regenerate the body after intense sporting activity. They are characterised by a dynamic and intense sequence of the various jets that start with a rain jet that envelops the entire body with a temperature ranging from 38° to 40° for a few minutes to allow the muscles to relax and unwind, and then move on to a cool mist jet that caresses the entire

body in sequence, followed by a massage that starts at the lower legs and gradually rises over the entire body. After which the temperature drops to a cool temperature to allow the stressed tissues to regenerate. A succession of hot and cold jets completes the programme, which ends with a cool-water phase for a general feeling of regeneration.

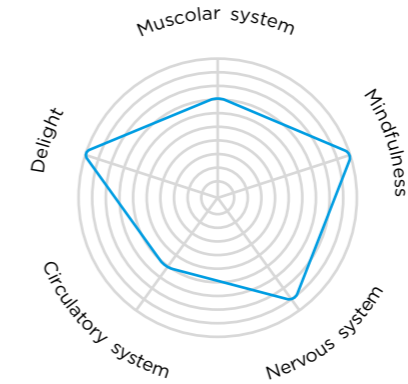

ENERGY

Energy programmes are characterised by a dynamic and intense sequence of the various jets starting with a turbine jet that is directed on the spinal column to immediately activate the connection points of all the muscles of the back at a temperature that varies between 39° and 40° to allow the muscles to relax and unwind, then moving on to a rain jet that in sequence caresses the entire body to then move on to the massage that starts from the lower legs and gradually rises

over the entire body. After that the temperature drops to 30° and then continues with an alternation of jets and temperatures that rise up to 39° and then drop back down to 30° to stimulate the process of alternating constriction and dilation vessels with important effects on the immune system and giving a sensation of new energy and vitality. The various types of jets follow one another in alternation, ending the massage with a cool rain jet that envelops the body with a general energising effect.

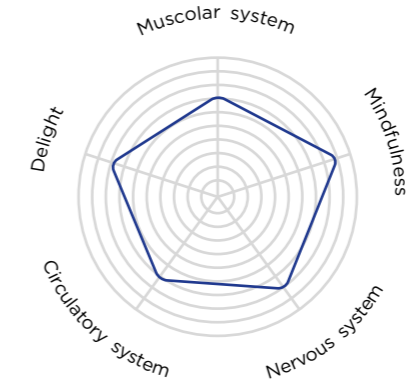

RELAX

Relax are characterised by a harmonious and gentle sequence of the various jets that start with a nebulised jet that envelops the entire body with a temperature ranging from 38° to 40° to allow the muscles to relax and unwind. to allow the muscles to relax and unwind and then move on to a rain jet that caresses the entire body in sequence, followed by a massage that

starts at the lower legs and gradually rises over the entire body. This is followed by an alternation of turbine jets for specific massage of the back, neck and spine. The various types of jets follow one another in alternation, concluding the massage with a warm nebulised jet that envelops the body with a general relaxing effect.

BALANCE

Balance are designed primarily for use with an operator for rain massage, characterised by a sequence of the various jets that start with rain jets directed on the legs that initially alternate between the right and left leg and gradually ascend the entire body until reaching the arms and shoulders, at a temperature ranging between 39° and 40° to allow the

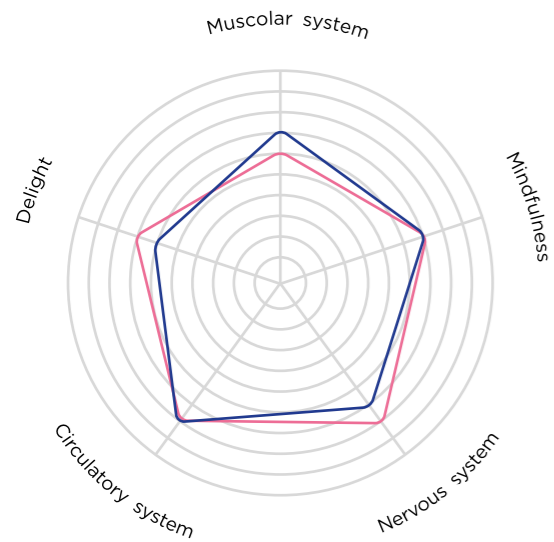

muscles to relax and unwind. Thanks to the encounter between water and hands, it is possible to create a massage therapy intervention in total symbiosis with the client's needs, exploiting the physical and chemical properties of this natural element, in an idyllic marriage of mind, body and environment.

PURA

The post-treatment shower offers two types of jets: rain and misting. It's designed to provide an optimal relaxation and cleansing experience after treatments such as massages or thermal therapies. The rain jet is ideal for purifying and rebalancing the body's temperature, while the misting jet is useful for removing treatment residues like mud packs. Activation buttons allow users to select the desired jet, while the integrated thermostat allows temperature adjustment to the most comfortable level.

DIAGRAMS

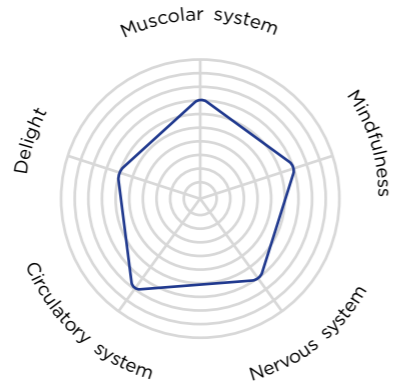

SCENARIO

- Pure rain 
- Pure mist 

PURE RAIN

The rain jet shower offers a relaxing and purifying experience. The water pressure is gentle and uniform, enveloping the entire body and promoting a sense of well-being. This type of jet is perfect for rebalancing body temperature.

Completing the treatment experience:

The post-treatment shower enhances the *care experience*, allowing you to gradually transition from the treatment to returning to your daily routine.

Skin cleansing:

After the massage, the oils or lotions used may leave the skin oily or greasy. A shower will help you *remove any excess oil residue and cleanse the skin*.

Feeling of freshness:

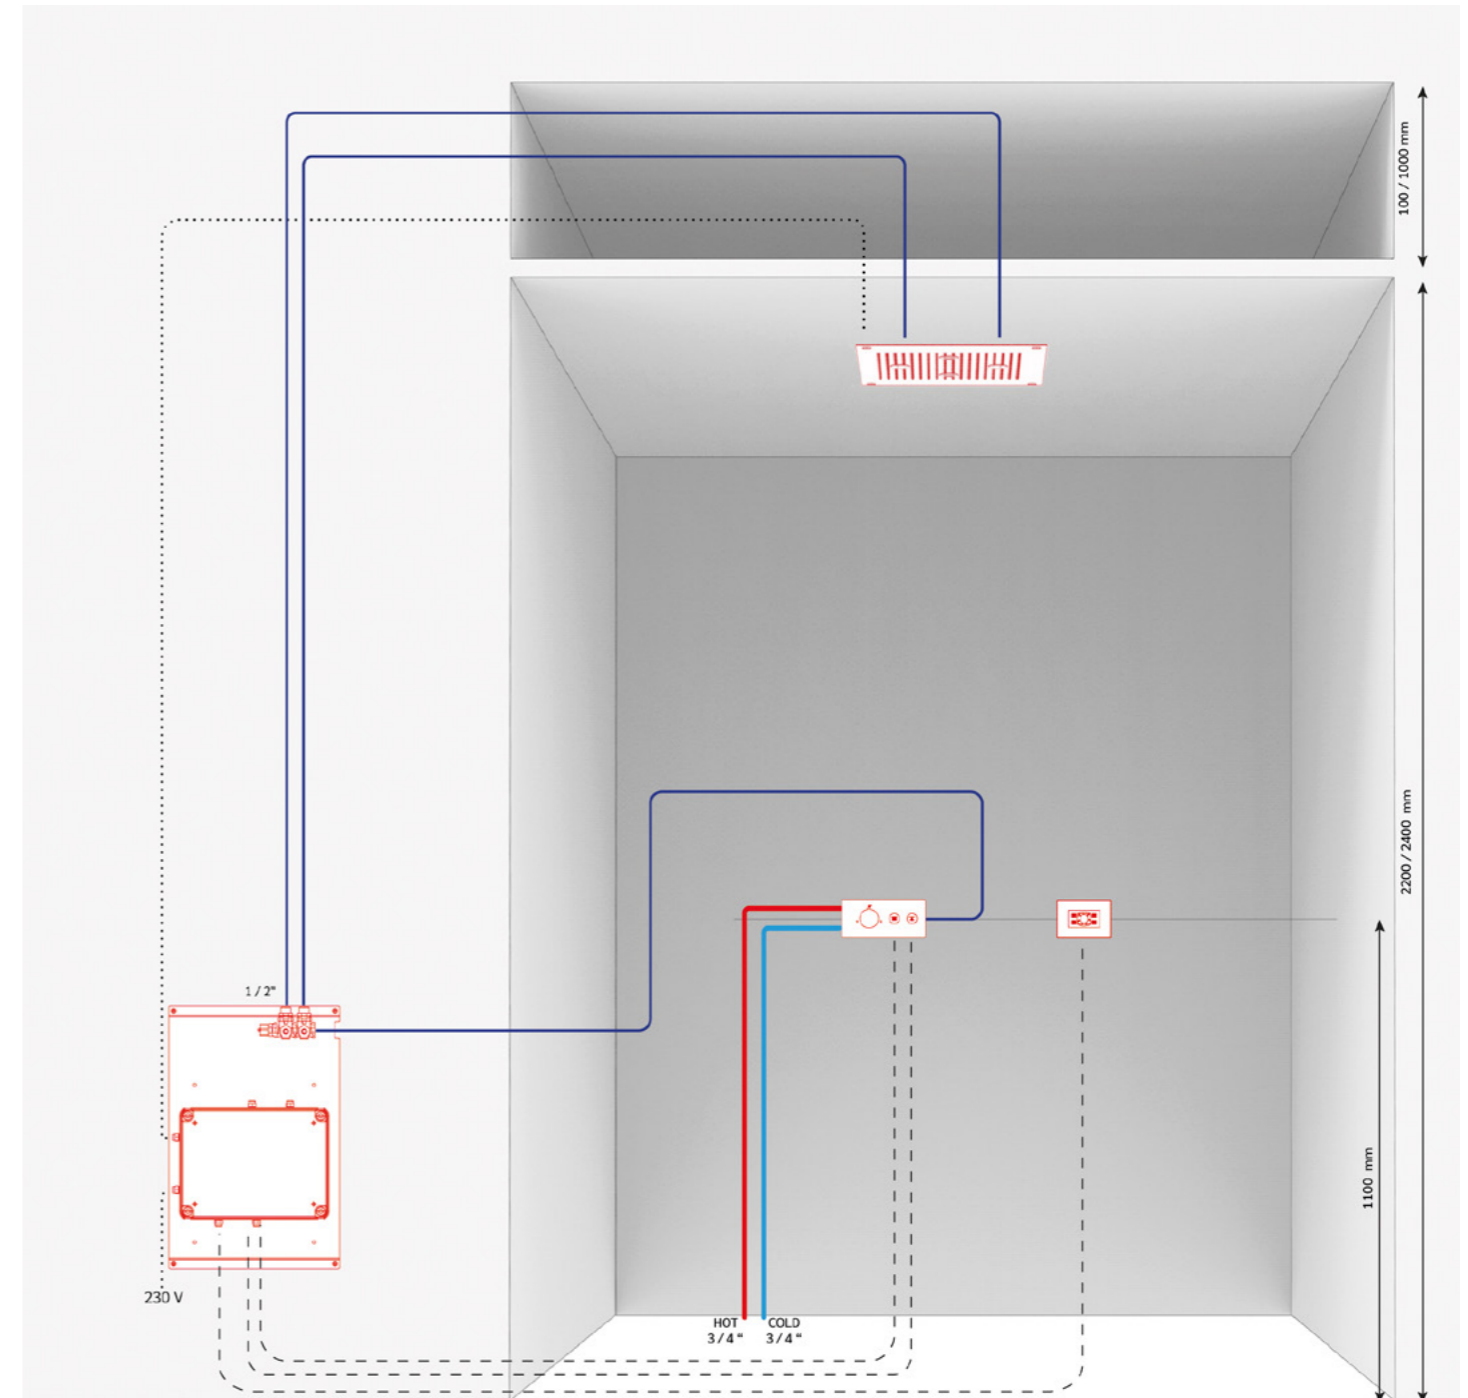

After the massage, you may feel a bit heavy or sleepy. A refreshing shower can help you wake up and *feel more energized*.

Promotion of skin hydration:

A post-treatment shower can also help prepare the skin for any subsequent treatments or for the application of moisturizing or toning products. Warm water can help *open the pores and improve the absorption* of subsequent products.

PRIVATE SOLUTIONS

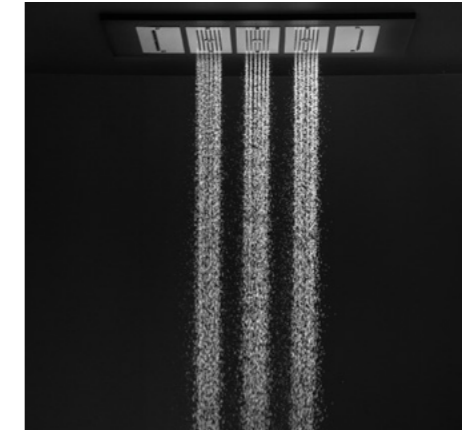

TREATMENTS AREA

A "private SPA" is an exclusive private SPA, typically integrated within one's own home or in a secluded area within a wellness center. It is a dedicated space for relaxation and well-being, designed to offer a

variety of treatments and activities to enhance physical and mental wellness. The primary goal of a private SPA is to provide a tranquil and luxurious environment where individuals can relax, rejuvenate, and

take care of themselves in complete privacy and serenity.

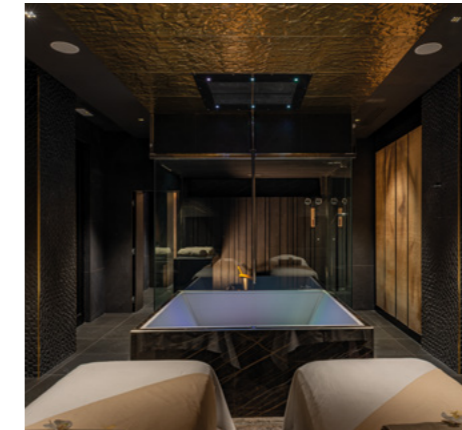

LIBERA

Libera is a modular system that allows you to freely express your creativity by creating your own private SPA according to specific needs and desires. The system consists of a series of modules, including water jets and lights, available in various finishes. The 3.5-inch capacitive touch display enables you to personalize the shower experience based on your physical and mental needs. The control panel offers a range of functions, including activating up to 4 types of jets, allowing you to create customized scenarios by changing the colors and aromas of the jets.

SENSORORA

The sensory shower is a multifunctional experience system that integrates Aquaform elements with chromotherapy, aromatherapy, and music, allowing users to choose from 3 or 4 distinct scenarios for a range of sensory experiences. It features independent temperature control, ensuring a personalized and private experience. This allows each user to customize their shower for maximum comfort, tailoring the environment to their unique preferences.

TWO OPTIONS

DIAGRAMS

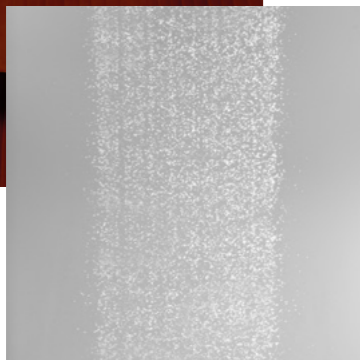

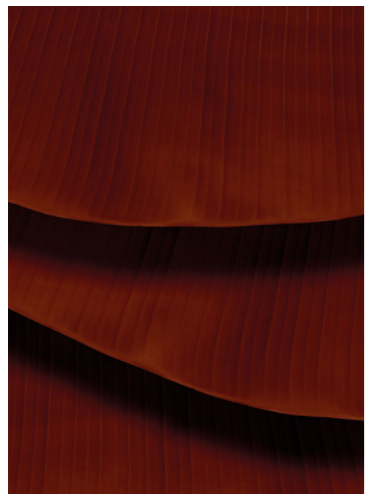

SCENARIO

- Dawn rain
- Night mist
- Massage jet
- Water curtain

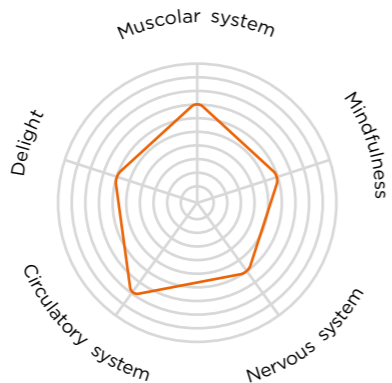

SCENARIO 1 SENSORA

DAWN RAIN

The dawn rain scenario within a SPA is designed to enhance the overall wellness experience, providing benefits both physically and mentally. This particular environment can serve as a preparatory phase for other thermal treatments, such as saunas or Turkish baths, facilitating the gradual adaptation of the body to higher temperatures. Warm water has the ability to open the pores of the skin,

aiding in the cleansing process and removal of impurities. This aspect harmoniously integrates into the beauty treatments and skincare offered within a SPA. The enveloping sensation of immersing oneself in warm water not only contributes to a pleasant state of physical relaxation but also plays a fundamental role in preparing the mind for a day dedicated to wellness.

SCENARIO 3 SENSORA

MESSAGE JET
(Green waterfall / Green aerated)

In the Massage Jet scenario with a waterfall or aerated jet, a soothing effect is achieved through targeted water streams that relax and rejuvenate the muscles. The green light, inspired by the colors of nature, exudes a sense of vitality and serenity. Accompanied by a soundscape that mimics the ambiance of wind, this scenario immerses you in a natural

environment, evoking a sense of carefree tranquility and deep relaxation.

SCENARIO 2 SENSORA

NIGHT MIST

Cold nebulisers within a SPA enhances the thermal experience, providing various benefits for skin, circulation, and mental state. This element refreshes the skin, particularly valued after hot treatments, and stimulates blood circulation, improving tissue oxygenation and aiding muscle recovery. Mint aromatherapy enhances the experience, offering

a fresher sensation. The blend of cold mist and mint aroma creates a revitalizing, multisensory environment, enhancing overall well-being and leaving guests feeling rejuvenated and invigorated.

COMFORTA

The seat shower provides a seated, immersive shower experience, combining a wide overhead rain jet, a soothing massaging waterfall, and targeted jets for the back. Users can select from a range of distinct scenarios and set their preferred comfort temperatures. Its ergonomic design and intuitive controls make it adaptable to diverse preferences, offering a convenient and personalized option for a rejuvenating wellness experience.

DIAGRAMS

SCENARIO

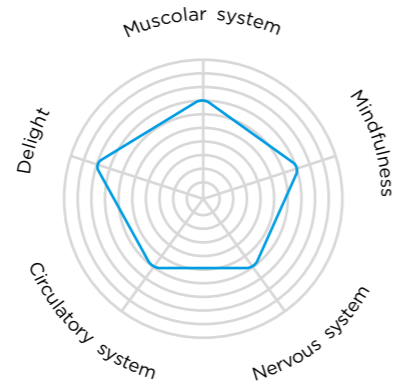

- Comfort rain 
- Comfort waterfall 
- Lateral jets 
- Leg jets 

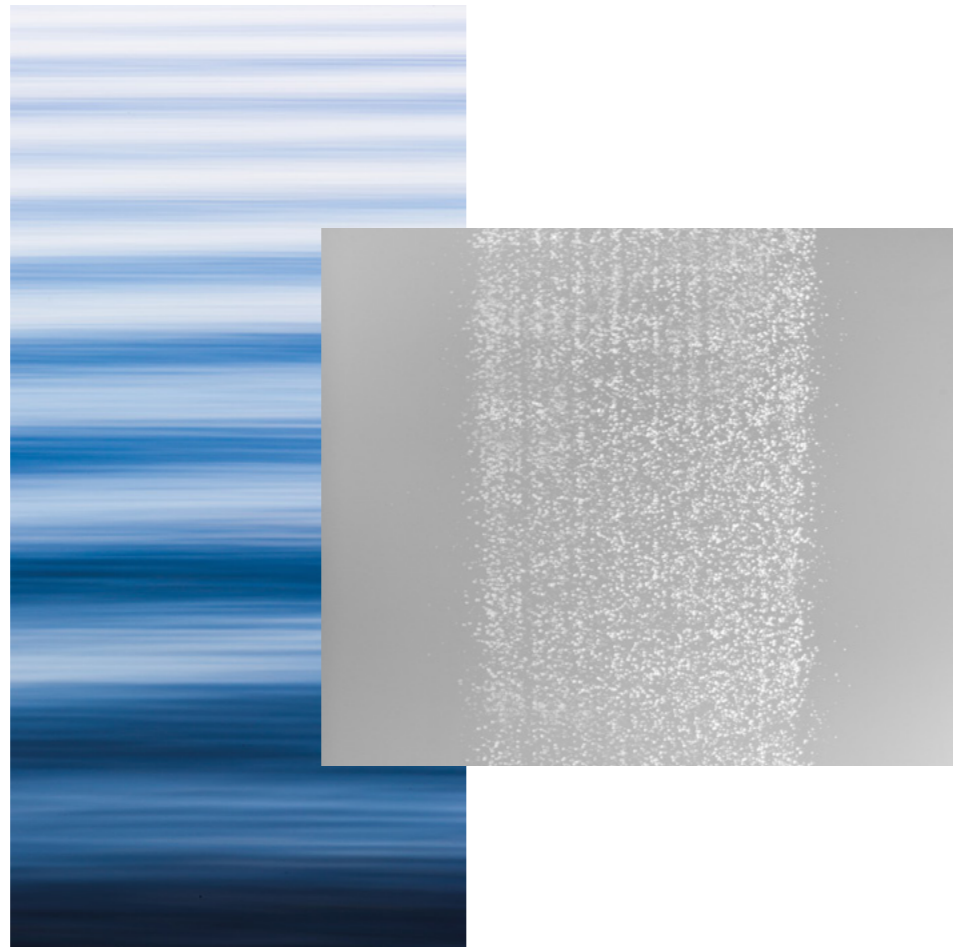

COMFORT RAIN

The comfort rain scenario offers an enveloping and relaxing experience. While users are comfortably seated, a broad stream of warm rain flows overhead, creating a sensation of warmth and comfort. This scenario aims to provide a welcoming and relaxing atmosphere, helping to alleviate stress and promote a total sense of relaxation. Seated warm rain can be particularly

appreciated to prepare for subsequent SPA treatments or simply to enjoy a moment of tranquility and well-being.

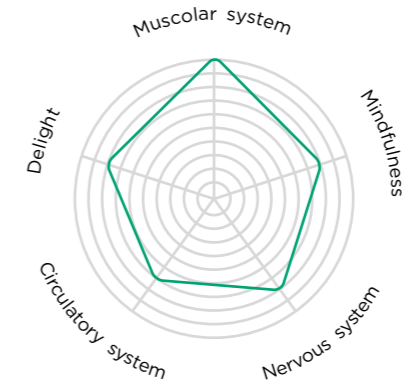

JET
Rain
 RECOMMENDED TEMPERATURE
38°C

COMFORT WATERFALL

Comfort waterfall jet creates a natural massage that helps relax tense muscles and reduce stress. The action of the water stimulates blood circulation, improving the supply of oxygen and nutrients to the tissues. In addition, the massage combined with the warmth of the water relieves muscle and joint pain. Water has a calming effect on the nervous system, helping to reduce anxiety and tension.

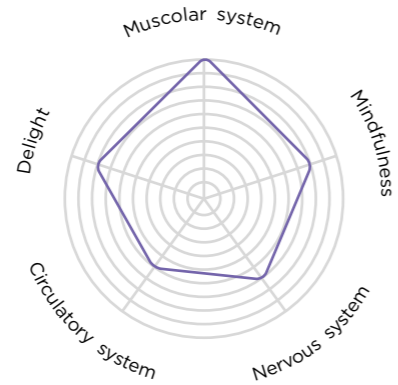

JET
Waterfall
 RECOMMENDED TEMPERATURE
38°C

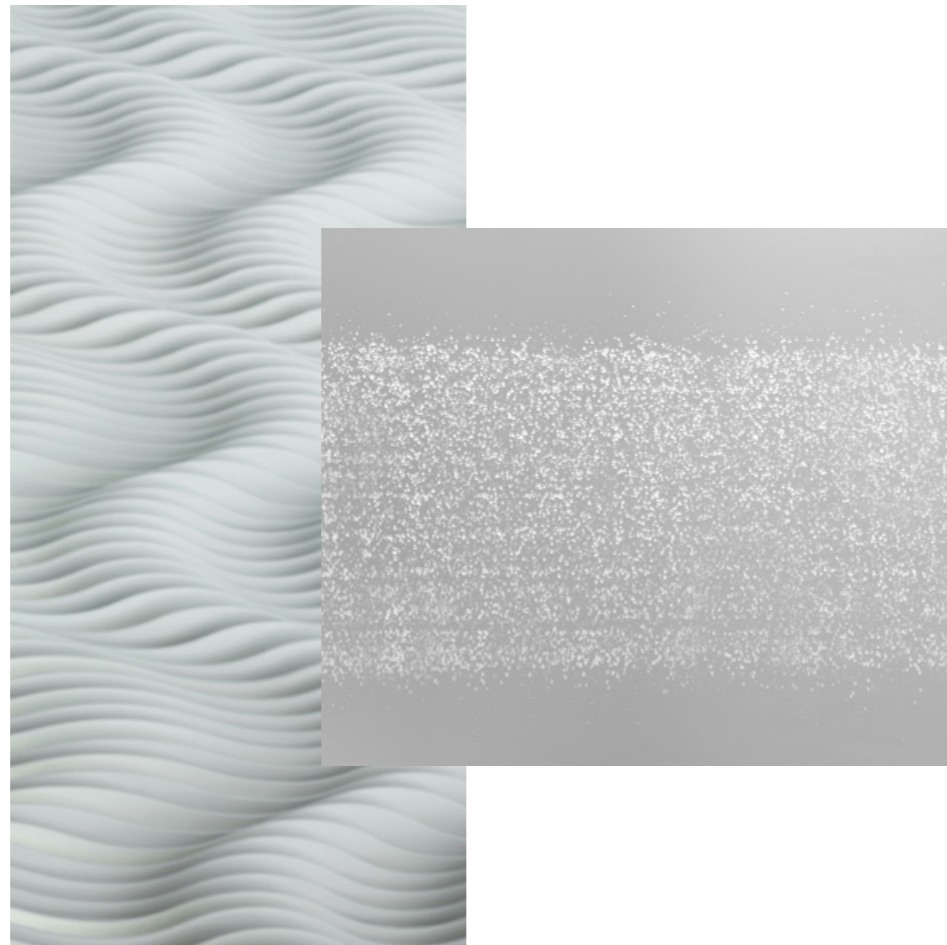

LATERAL JETS

While users are comfortably seated, specifically positioned massaging jets target the back, providing a toning and relaxing massage. Water flows with controlled pressure, helping to reduce muscle tension and create a sense of well-being. This scenario is ideal for those seeking targeted treatment to alleviate any tensions in the back area while sitting in total comfort, creating

a personalized and relaxing shower experience.

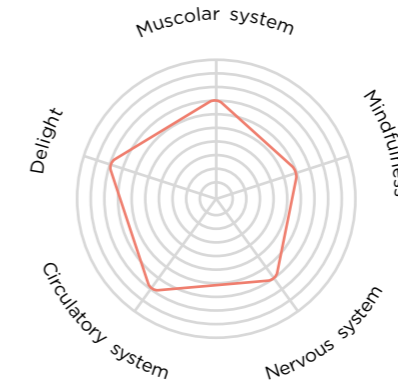

JET
Lateral rain jets
 RECOMMENDED TEMPERATURE
38°C

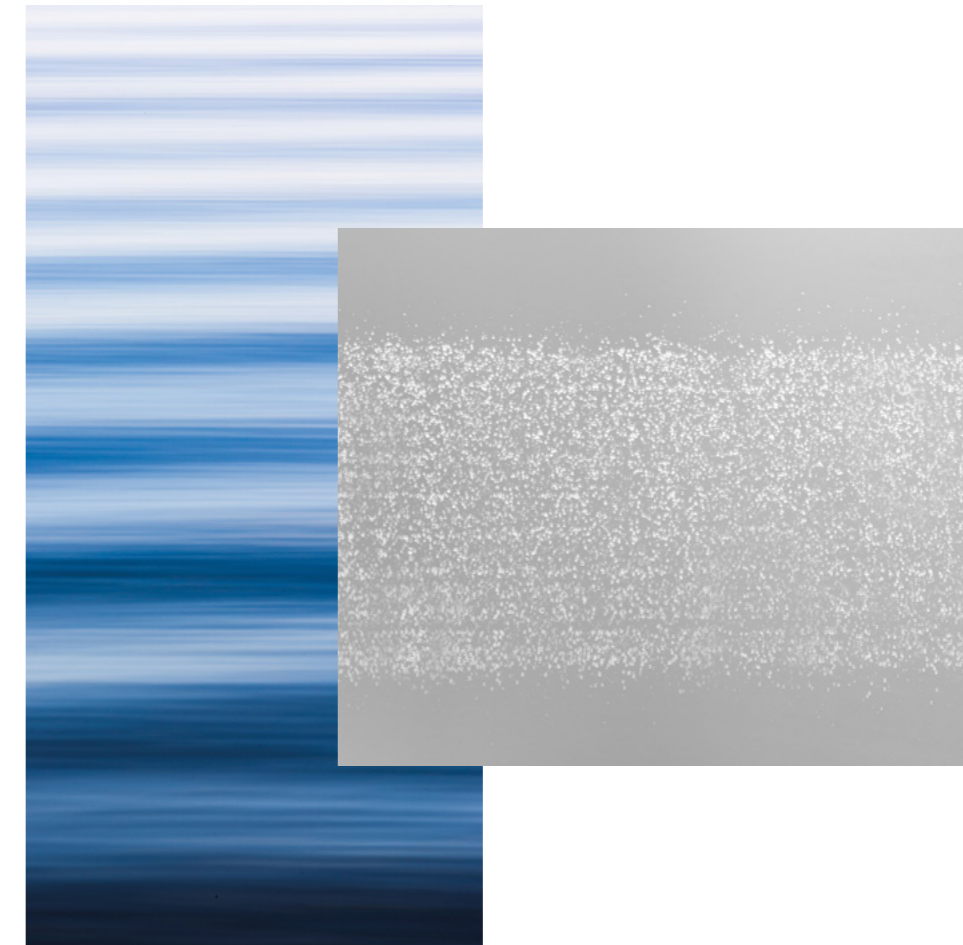

LEG JET

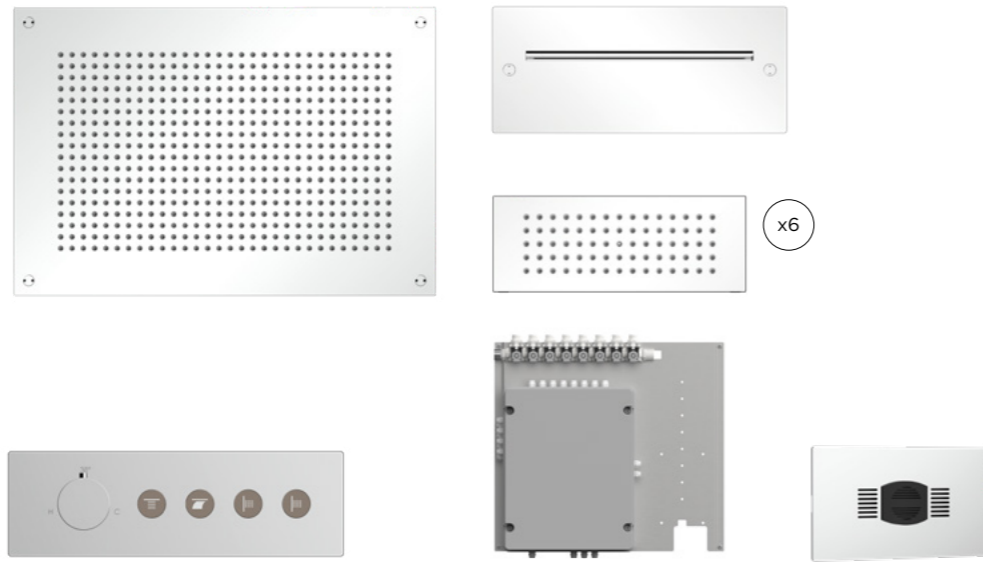

Six strategically positioned water jets deliver a powerful lateral massage, combining warm water and high-pressure streams to relax muscles and alleviate tension. This technique is particularly effective for back-related issues, providing comprehensive coverage and reaching muscles often difficult to access through traditional massage. The system is especially beneficial in combating back pain,

reducing muscle spasms, and alleviating persistent tightness.

JET
Lateral rain jets
 RECOMMENDED TEMPERATURE
34°C

COMFORTA VALUES

Accessibility

Seat shower is particularly useful for those who have difficulty standing for long periods or for elderly individuals and those with **mobility issues**.

Safety

For those with stability or balance issues, the ability to sit during the shower **reduces the risk of slipping or falling**.

Relaxation

The option to sit during the shower creates a **more relaxing experience**, allowing people to fully enjoy the moment without the discomfort of having to stand.

Muscle relaxation

Water jets can act as a form of massage, helping to relax tense muscles and **reduce any muscle tension**.

CHANGING ROOM

CHANGING ROOM AREA

Changing rooms in a SPA play a crucial role in the overall customer experience. They are spaces designed to provide comfort, privacy, and convenience during the transition from the outside environment to the

SPA and vice versa. The design of the changing rooms should reflect the style and overall atmosphere of the SPA, contributing to creating a welcoming and relaxing experience.

LUMINA
> **White light shower**

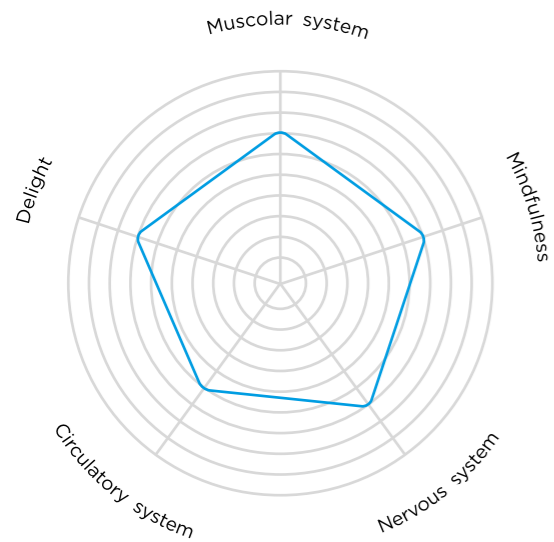

ESSENTIA
> **Shower**

LUMINA

Lumina shower systems stand out for their innovative integrated white light, designed to illuminate the changing room environment evenly and pleasantly. This gentle lighting transforms the atmosphere, making the bathroom corners less visible and more welcoming. Lumina also offers a complete activation panel with timer and thermostatic, allowing users to customize the shower experience. The thermostatic enables adjusting the water temperature to ensure optimal comfort, thus preparing the body for the ideal temperature for subsequent wellness treatments.

LUMINA VALUES

Uniform and pleasant lighting:

The integrated white light illuminates the changing room environment evenly and pleasantly, *enhancing the overall shower experience.*

Cozy atmosphere:

The gentle lighting creates a *cozy and relaxing atmosphere* in the changing room, contributing to the comfort and well-being of customers.

Customization of experience:

The activation panel with *timed and thermostatic* button allows users to customize the shower experience by adjusting the water temperature and duration according to their preferences.

Optimal comfort:

The thermostat enables adjusting the water temperature to ensure optimal comfort during the shower, also preparing the body for the *ideal temperature for subsequent wellness treatments.*

Energy and water savings:

The *timer controls* the duration of the shower, helping to save water and energy, thus reducing environmental impact and operational costs.

Elegant design:

In addition to advanced features, the sleek design of Lumina shower systems adds *style and modernity* to the changing room, enhancing the overall image of the facility.

ESSENTIA VALUES

Intense water jet:

The water jet provided by essentia shower systems is intense and purifying, offering a **revitalizing and refreshing** shower experience.

Adaptability to changing rooms:

Designed **to be integrated into changing rooms**, essentia shower systems are ideal as the first step towards wellness in a SPA or wellness center.

Customization of experience:

The time control allows the user's experience to be personalised.

Optimal comfort:

The presence of an activation panel with timer and thermostat allows users to personalize their shower experience by **adjusting the water temperature** and duration according to their preferences.

Energy and water savings:

The use of the timer allows for control of the shower duration, contributing to **water and energy savings** and reducing environmental impact and operational costs.

Insight

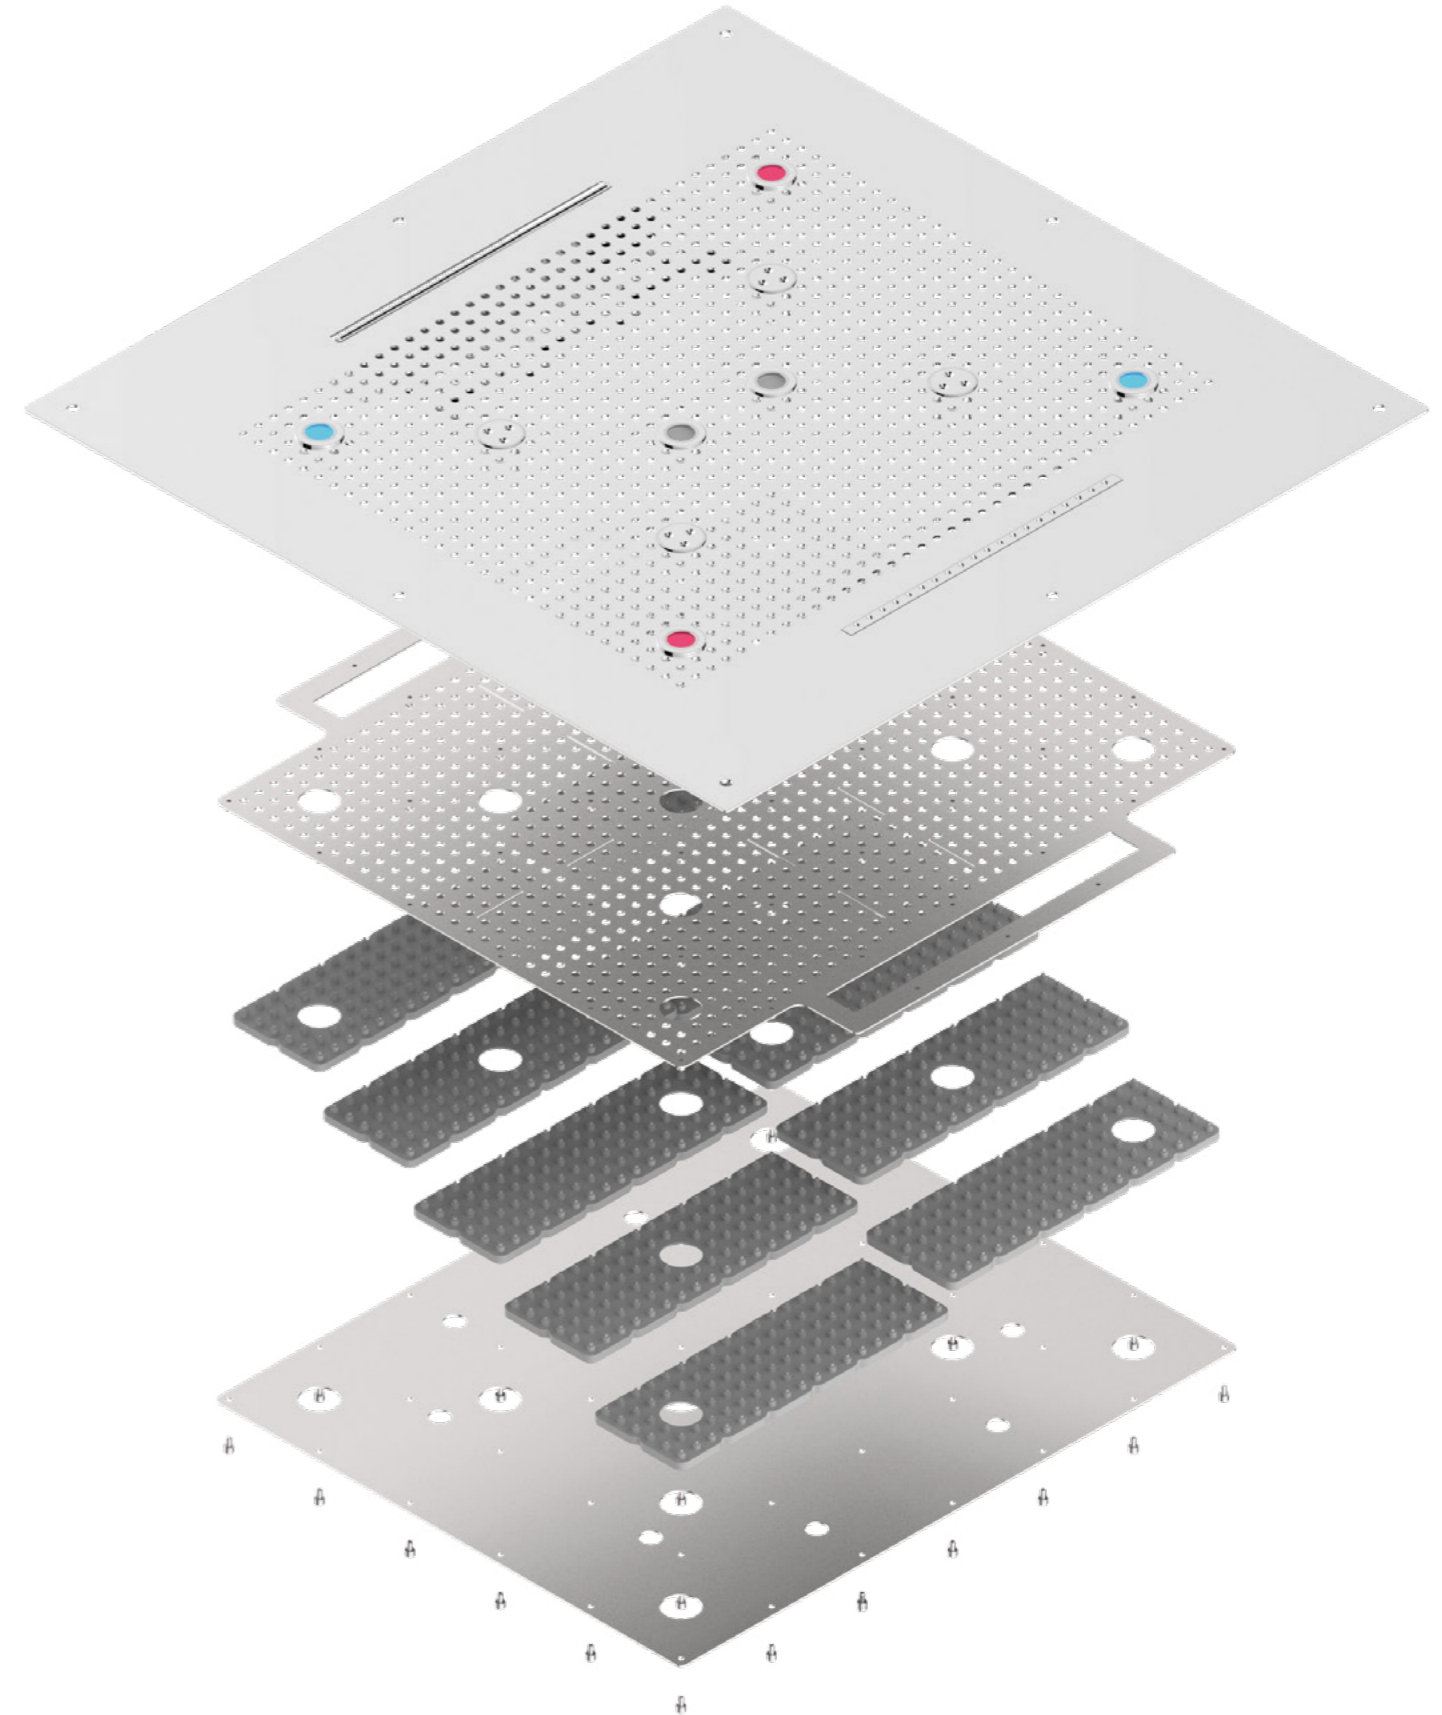

With years of experience to dedication to research, aquaform has revolutionized the design concept of experience showers. aquaform is committed to design and production, giving great importance to the technical and functional aspect of its products. We use only high-quality materials, made in Italy, and give special attention to the development of each component, thus ensuring excellent standards for the final product for an unprecedented wellness experience.

DESIGN CONCEPT

aquaform shower systems are characterized by a double-flange construction, consisting of **two distinctive steel flange**: one dedicated to the technical part and one to the aesthetic part.

These two flanges are welded together using a specialized laser machining technique. This technology offers a number of advantages from both aesthetic and functional points of view. From an aesthetic point of view, this laser welding gives the **shower system a perfectly flat** surface free of machining defects. The joint between the two parts is virtually invisible, ensuring a flawless appearance. From a functional point of view, this double-flange construction contributes significantly to the **overall strength of the shower head**. The welded connection provides **stability and strength**, ensuring that the shower system is able to withstand daily use without any problems.

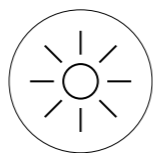

WELL-BEING UNDER CONTROL

aquaform has developed a **full range of control systems** for advanced management of key parameters of water, light, aroma, and music. Each shower system offers up to 8 different management modes with various user interfaces, ensuring a **personalized and complete experience**. All aquaform systems are designed with an **intuitive user interface**, making them easy and accessible to install and use. Simplicity of operation is at the core of our design. Each system comes pre-wired and 100% factory tested, greatly simplifying the installation process. This ensures smooth setup and increased operational efficiency.

LIQUID SILICONE MEMBRANE

aquaform has introduced a revolutionary modular water delivery system by designing a special liquid silicone membrane.

This distribution offers a number of extraordinary advantages:

LIMESCALE AND ANTIBACTERIAL

The nature of liquid silicone makes it *easy to clean* and remove residue, ensuring simple and effective maintenance. This feature not only simplifies daily care, but also helps to significantly extend the life of our shower systems over time. This technology helps to maintain a *hygienic environment*, with *antibacterial properties* that promote health and cleanliness.

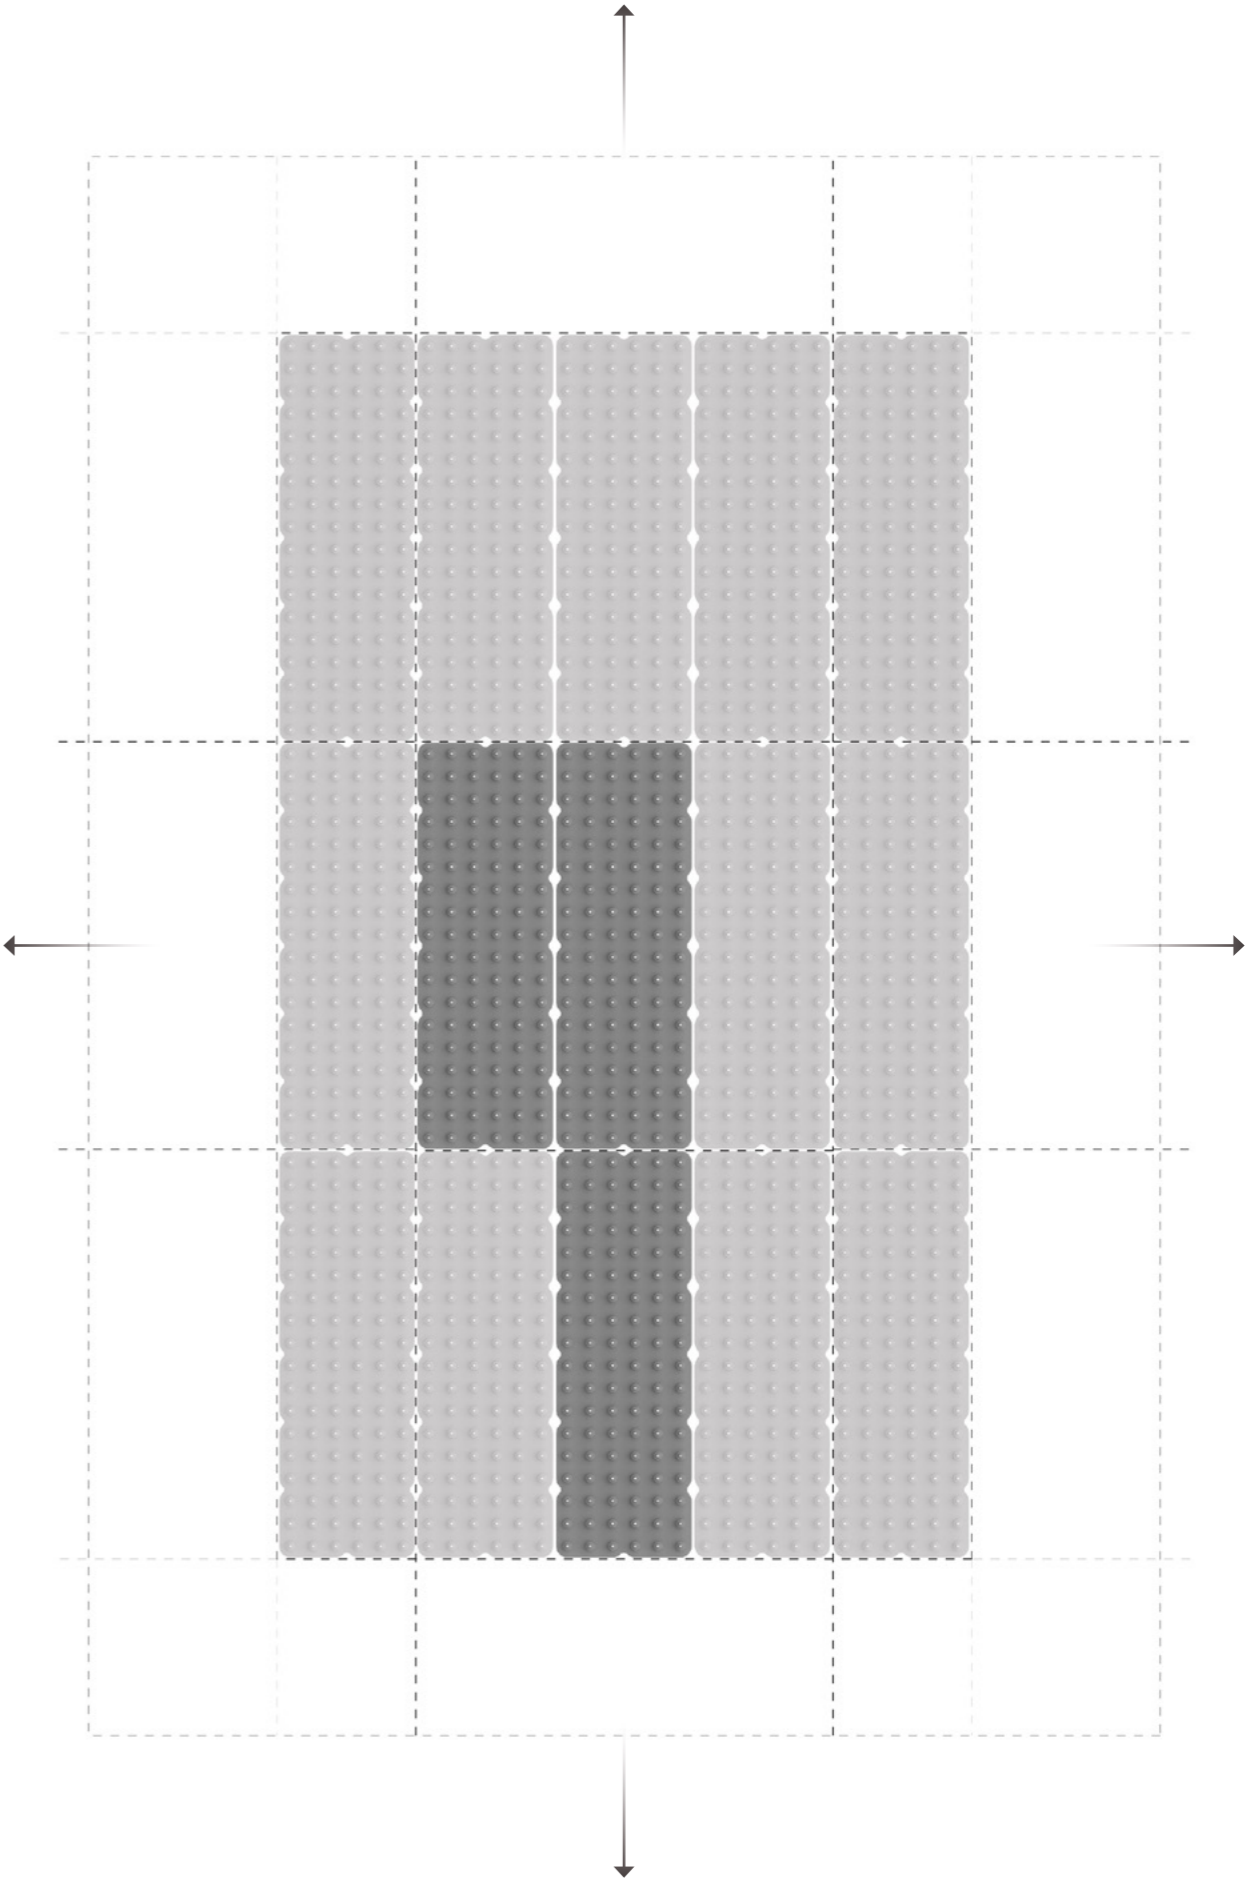

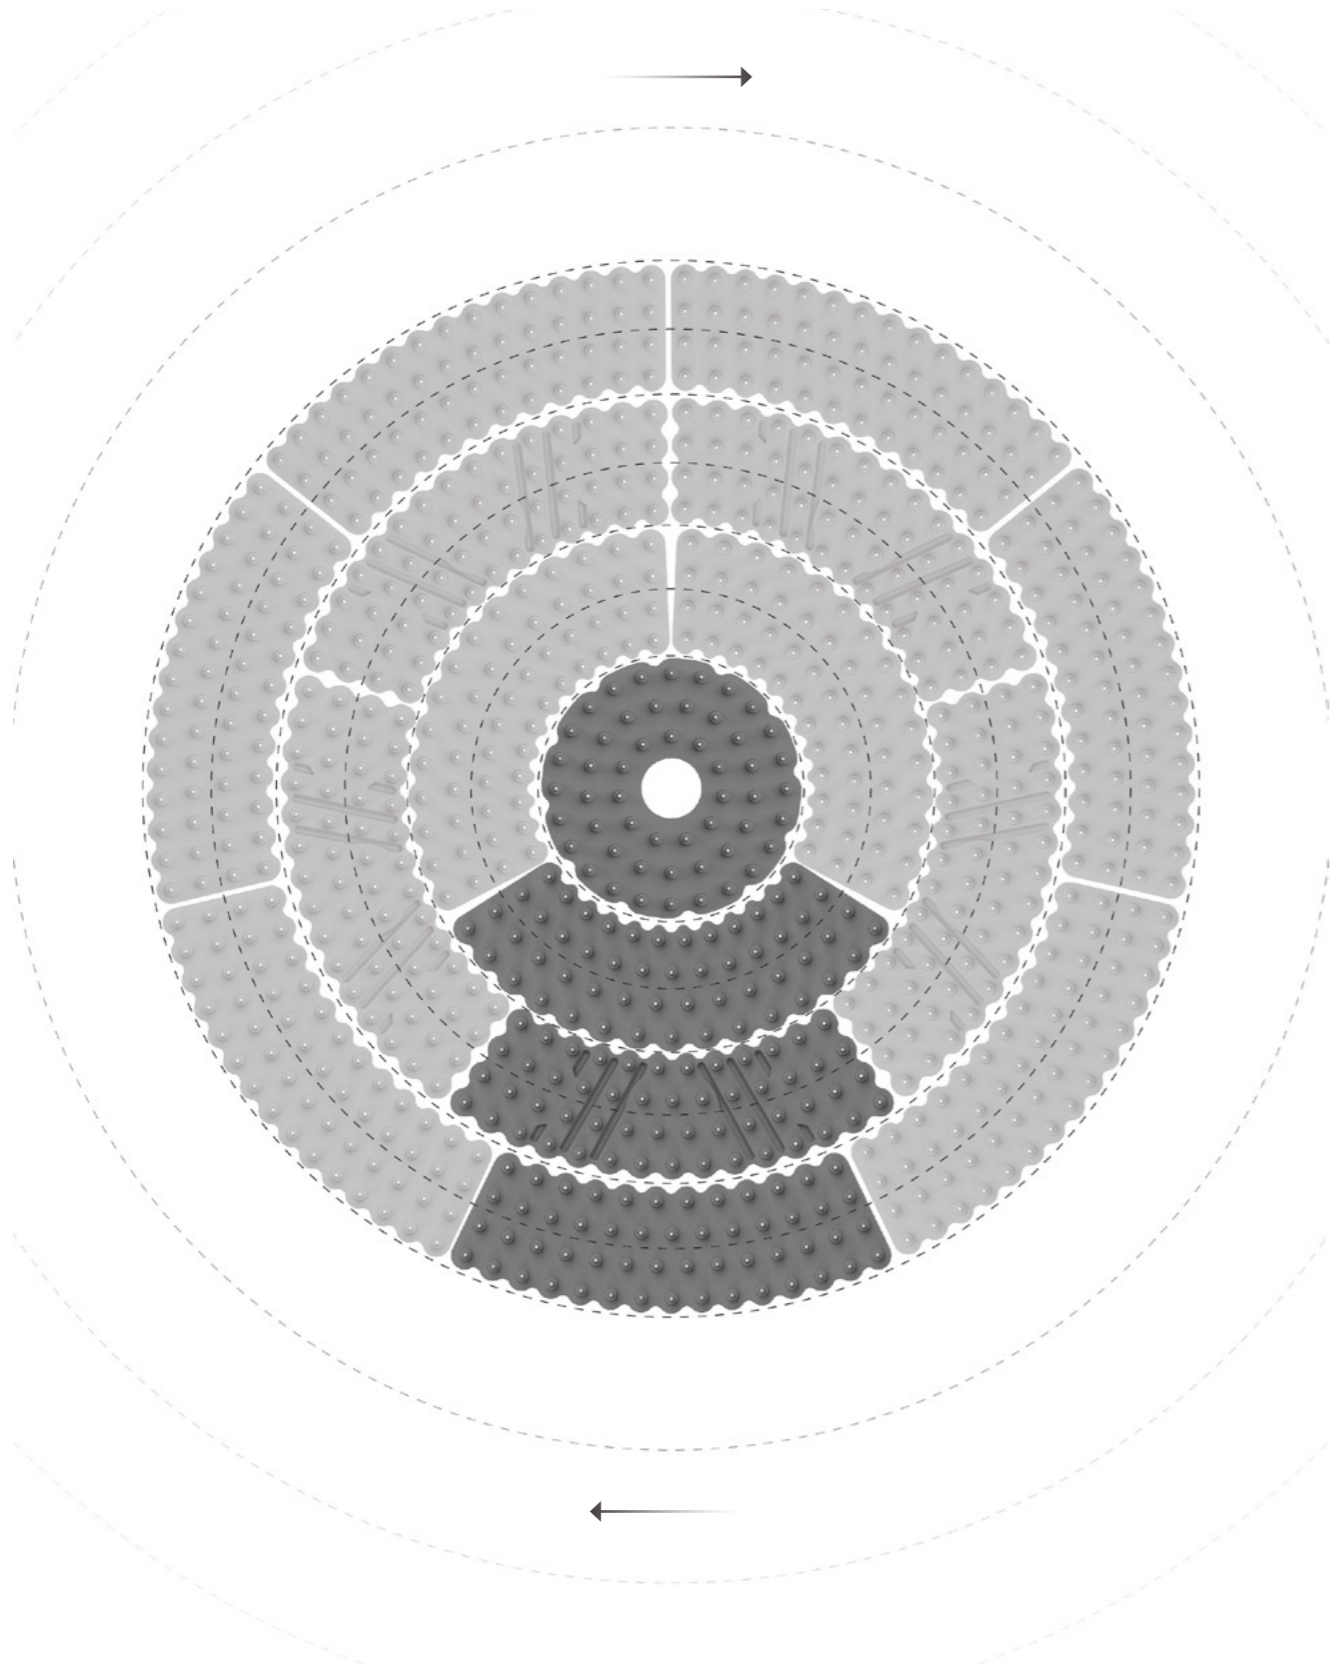

UNIFORMITY OF DISTRIBUTION

Uniform distribution of the rain jet over every inch of the surface, even on large showerheads.

LOWER PRESSURE AND HIGHER RESISTANCE

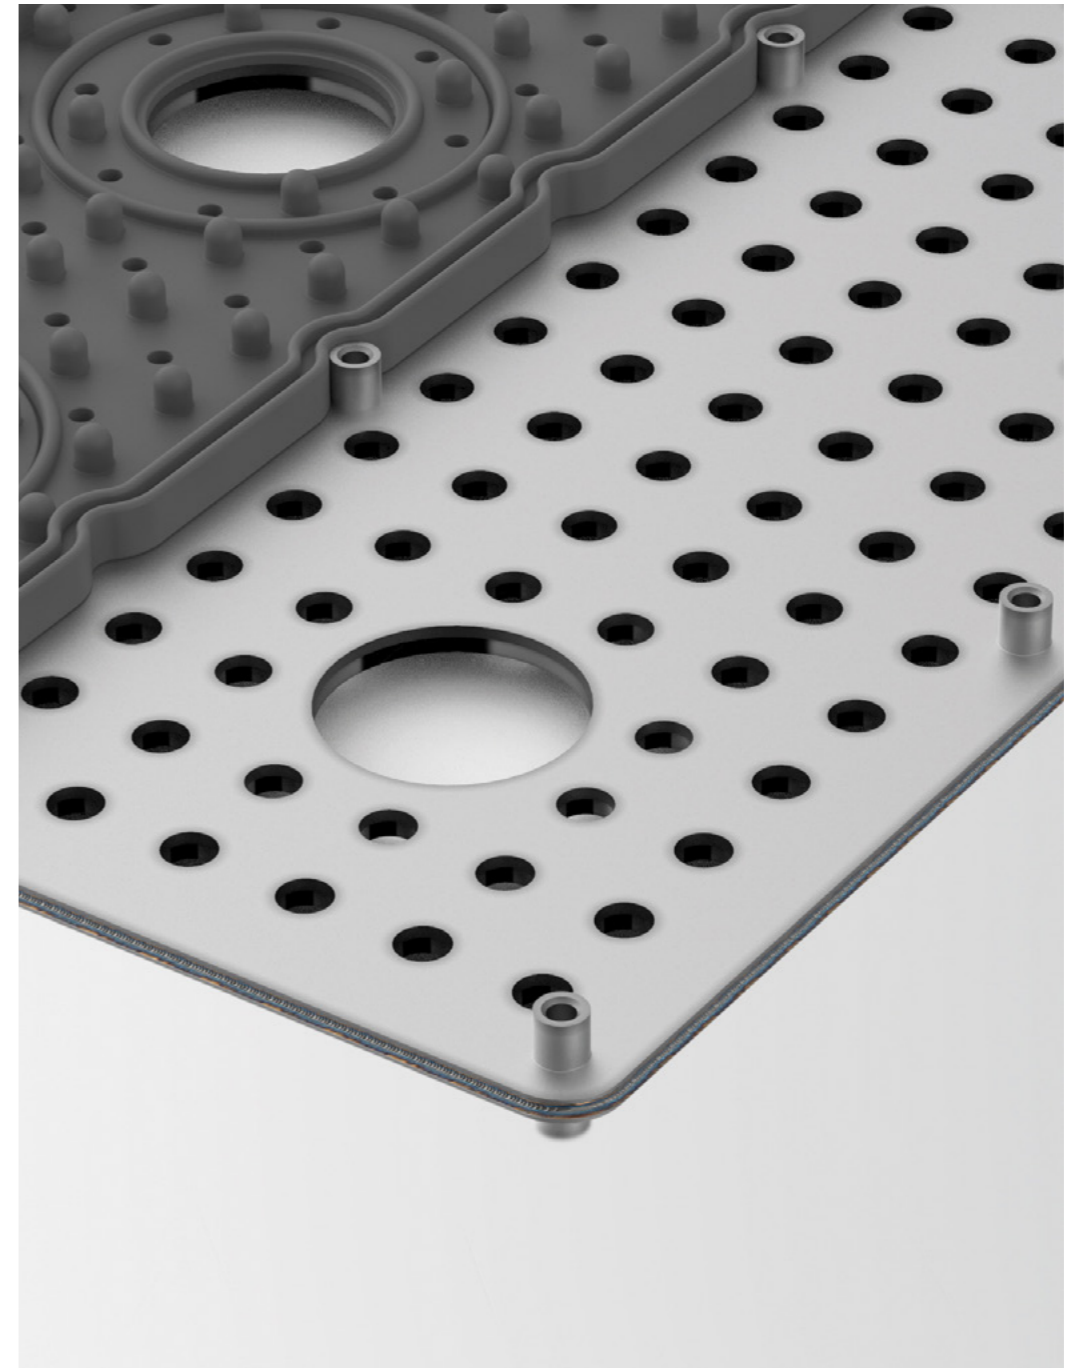

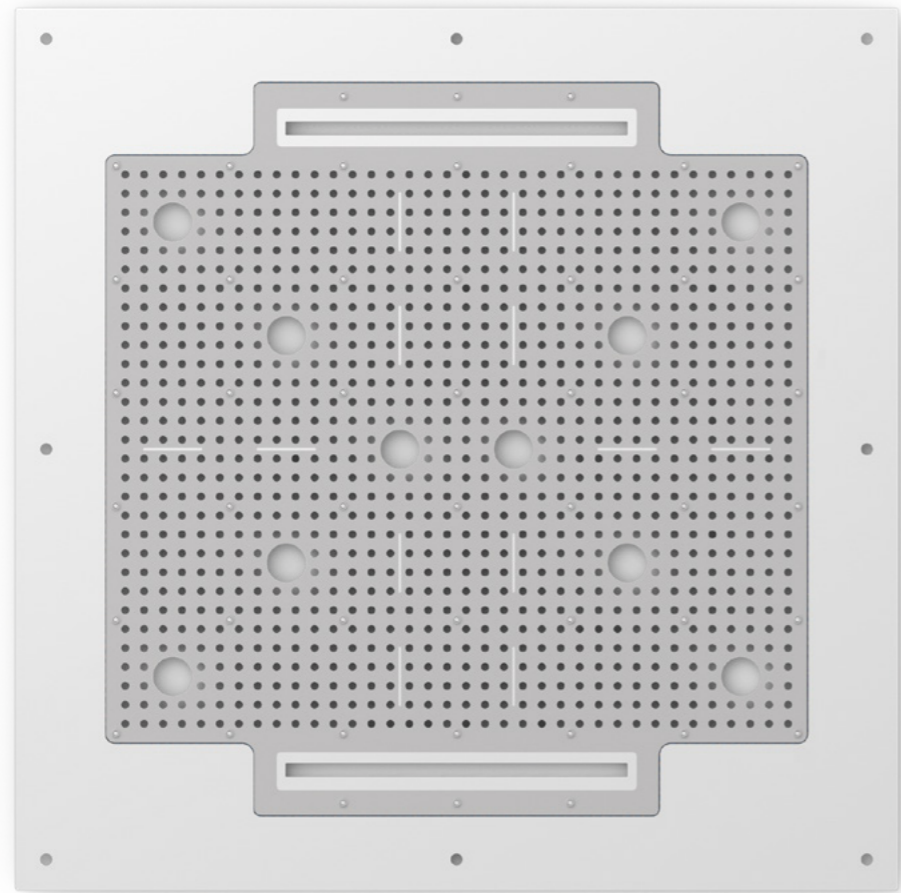

Our modular system enables water flow distribution with *lower pressure* while providing greater resistance. This not only optimizes efficiency but also contributes to *water savings*.

COUNTERPLATE

The entire range of shower heads is equipped with an exclusive double plate construction, one that holds the technical part and another for aesthetic purposes. They are welded together through a particular laser processing that provides many *aesthetic and functional advantages*.

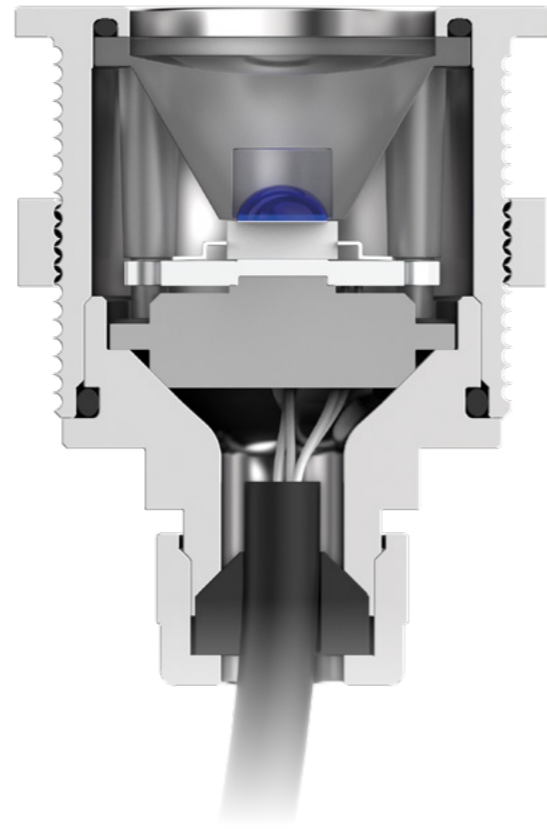

ADVANCED DESIGN OF WATER JETS

Every element of our products undergoes meticulous study and design within our research and development department, ensuring a diverse array of **high-performance water jets**. At aquaform, we set ourselves apart with our dedication to technical precision. Each type of jet is the culmination of advanced design aimed not only at providing a water experience but also a **technically superior wellness experience**. Our misting jet utilizes special microturbines to precisely blend air and water. This state-of-the-art technology creates a misting effect that envelops the body, offering a refreshing and calming sensation. The careful design of the waterfall jet guarantees flawless water flow, perfectly directed for a gentle cascading feeling on the shoulders. Strategically positioned and thoughtfully crafted, our aerated jets are engineered to deliver a targeted shoulder massage.

LIGHTING DESIGNED FOR WELL-BEING

Chromotherapy is a key element in aquaform's offering, which is why we have paid special attention to the complete design and production of the lighting system. Using a special depth lens combined with a powerful 3W RGB+W LED with a 30° light beam, amplified by a PMMA optical lens, we create a true *"shower of color"*. Designed to withstand the most demanding conditions, the system has an IP68 water protection rating, ensuring reliable operation even in wet environments. The resistance of the spotlight has been tested and certified for both electrical and photobiological safety, ensuring safe use that meets the *highest standards*. On the other hand, the design of an advanced heat sink enables the LED to *operate continuously* for thousands of hours, ensuring *long life and reliable performance over time*.

AROMATHERAPY FOR ALL ENVIRONMENTS

aquaform has developed *two innovative methods* for diffusing aromas within the shower, offering customized solutions to create a unique wellness experience. The first method is best suited for private SPA environments, using an innovative diffuser that allows *dry diffusion*. This device fits directly inside the shower and houses interchangeable cartridges containing a *wide range of fragrances*. For professional environments, we propose a system based on peristaltic pumps, which *allows the scent to be introduced directly into the shower water*. This process is fully controlled by our advanced control units, ensuring a personalized, *high-quality aromatherapy experience*.

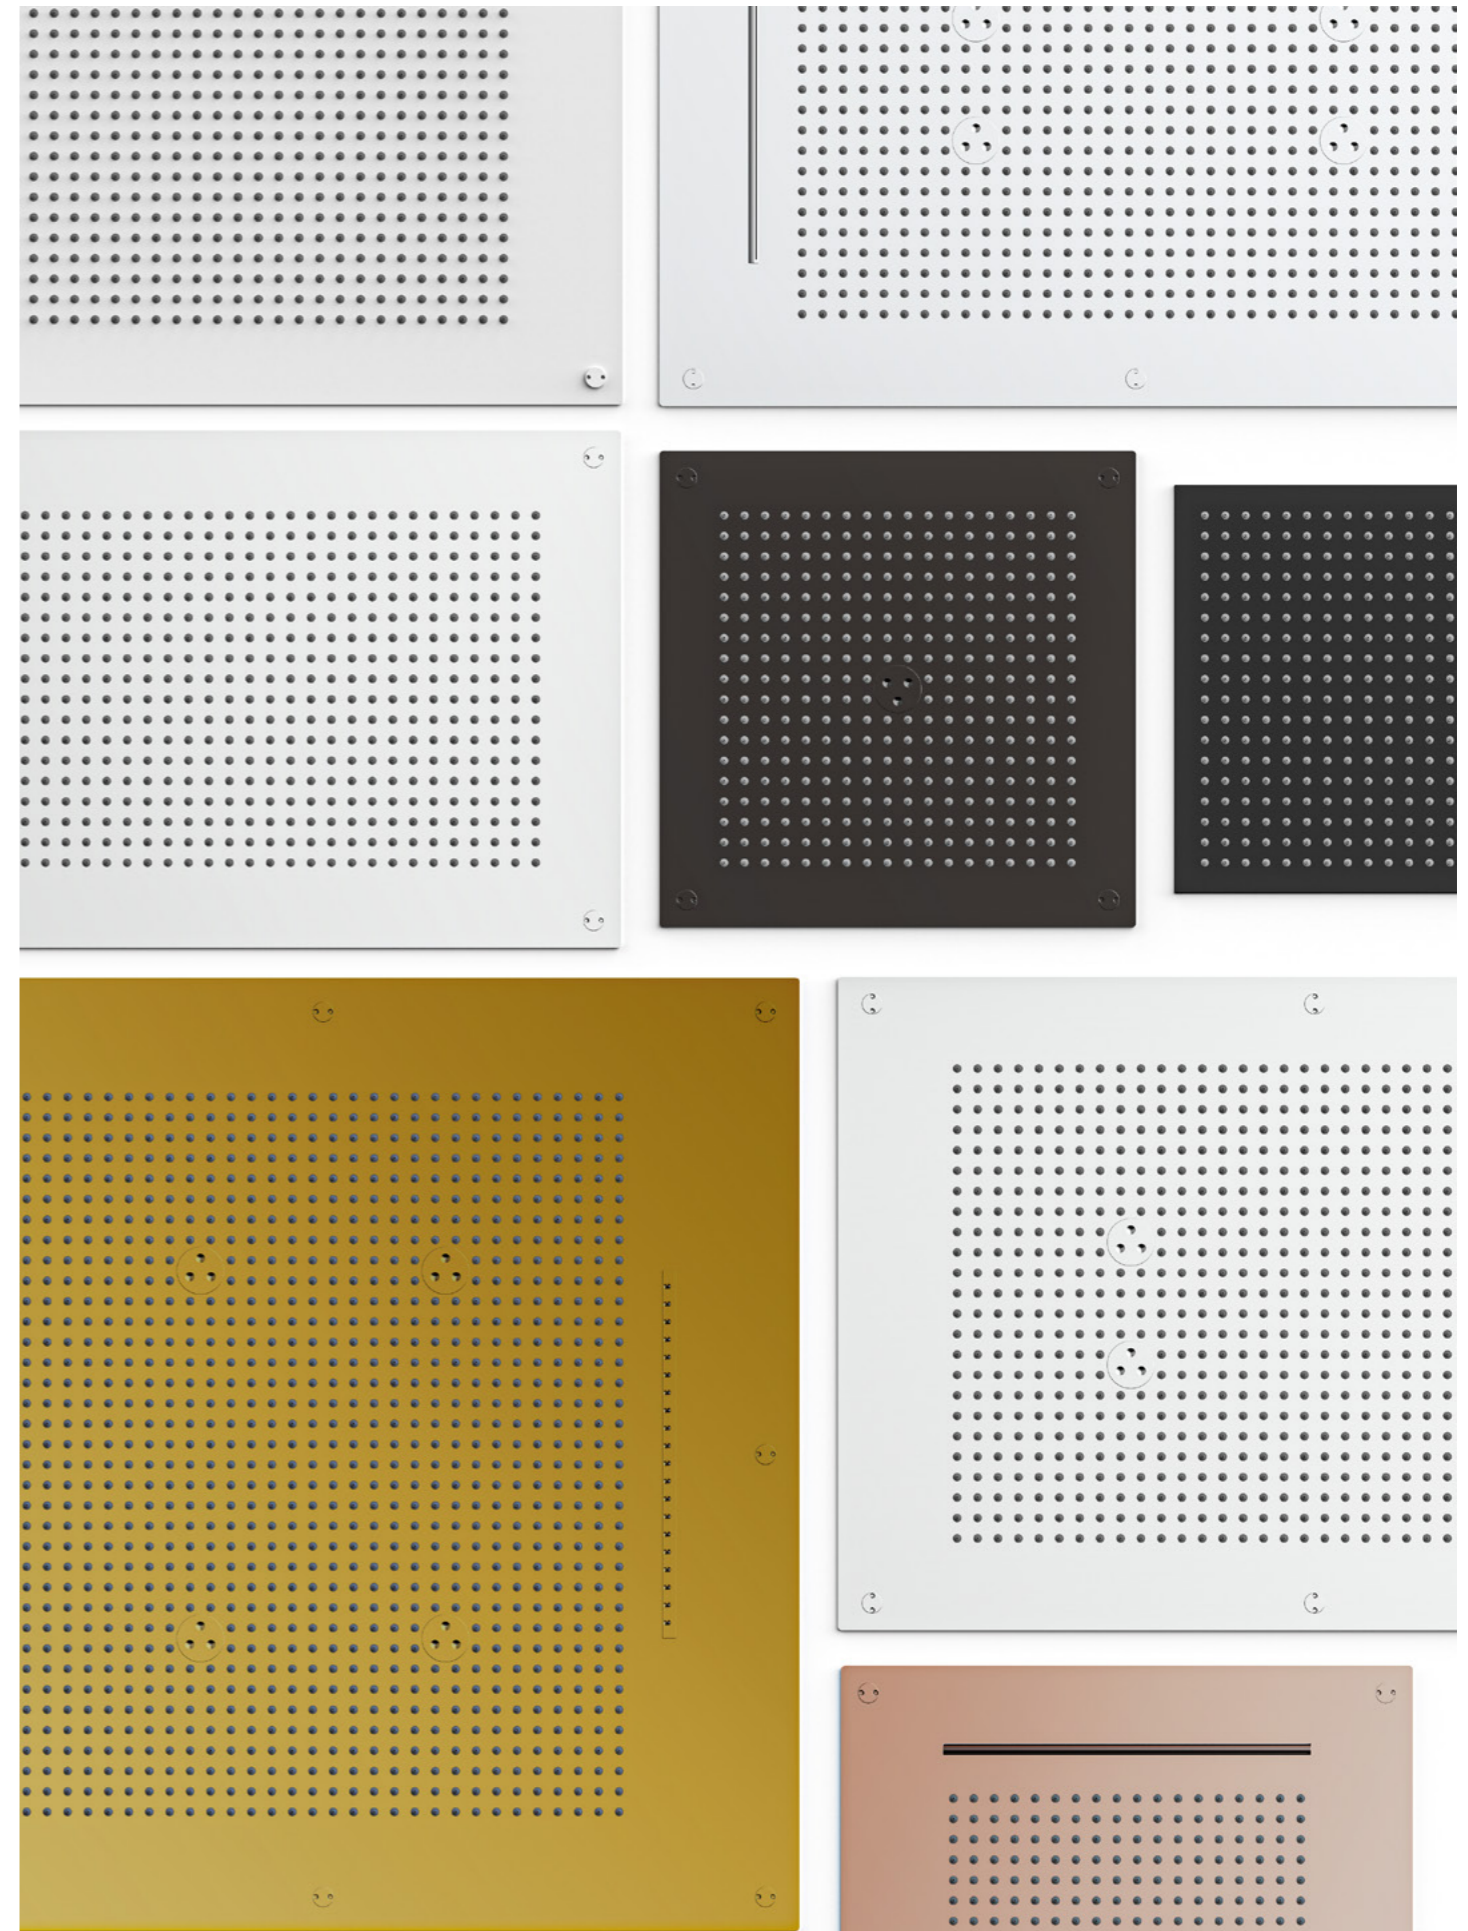

INTEGRATED AUDIO SYSTEM

aquaform has introduced the option of integrating an audio system into its shower systems, aiming to enhance the users' multisensory experience. The *speakers are incorporated into the technical part of the shower*, keeping the overall aesthetics of the product intact. With our advanced control system, we can manage music tracks and ambient sounds to *recreate natural atmospheres*, integrating them directly into the shower's user program.

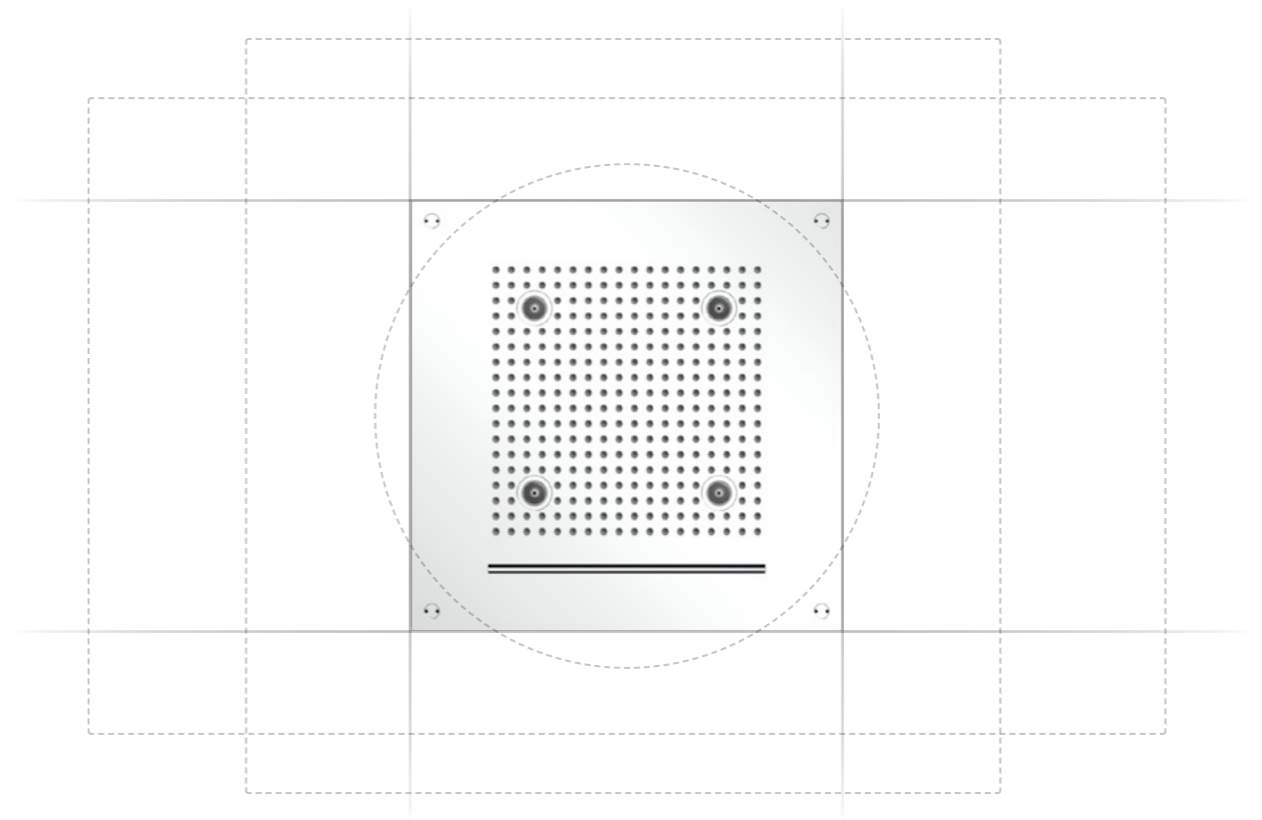

INNOVATIVE FINISHES

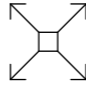

aquaform offers a wide range of finishes to meet every need and environment. Options include super mirror or brushed steel, **PVD-coated finishes** for increased resistance to thermal or salt water, with the possibility of customizing the color. In addition, we offer finishes with a special, innovative **ceramic coating**. Our commitment to **style and design** is combined with the quality of materials offered, ensuring solutions that meet the **highest standards**.

Tailor made

Our ability to develop customized products is a key pillar of aquaform's approach. We are able to adapt to each customer's specific needs, creating tailor-made solutions that reflect their vision and the unique style of each SPA project. By combining experience, innovation, and customization, aquaform is confirmed as a reliable partner for those seeking customized products in SPA environments. From water features to water curtains for swimming pools, from large emotional showers to special finishes and customized programs, we are ready to meet every request

Commitment to well-being

At aquaform, we firmly believe that well-being lies at the heart of every experience, and water, as a fundamental element, can be harnessed to enhance comfort and relaxation. Each of our products is crafted with a clear philosophy: to prioritize the individual and their well-being. Every concept that evolves into an aquaform product stems from a profound comprehension of human needs. We observe and listen, drawing inspiration from people's desires and requirements. Every component of our products is meticulously designed to address a particular need, ultimately enhancing personal well-being.

"SPA" stands for "Salus Per Aquam,"
meaning "health through water." Water
is the essence of any SPA experience,
and without it, true wellness cannot be
achieved.
